I got some GREAT 160 meter QSO QSL cards, Jeff, when I was KC8M. Wasn't a "bootleegger", though. KC8MK in Ohio was a very prolific 160'er, and I presume these guys mistook the call as "KC8M...Go Ahead" rather than KC8MK.

Wished I cudda used those cards!

Jeff,

If the 10x number is listed on any of the
qsl cards, then you should be able to
use the search facility at the ten-ten
website to find the culprit.

Good Luck!

Gary, WG7X

Assuming, of course, he wasn't botlegging that too!

You might try to see who the 10-10 number holder is, if it IS a legit 10-10 number, then see if the two of you have any "mutual" acquaintences that might be prone to such carrying's on.

Of course, the culprit might ALSO be unlicensed. Southern California is LOADED with unlicensed ham-wannabe's that perpetrate such an act. Ofcourse, no one >>I<< might know...!!!

This region is not flat, HTs are useless around here without repeaters
and even then they have to be less than 5 miles from a machine they
can hit. I have two 50w 2m mobile xcvrs and a 100w HF cw/ssb mobile
xcvr with which I can beep and yak the whole planet on 9 bands
withount a repeater.

> ALL schools, not just high schools.

"America's 1st Freedom" magazine. And I can't remember if it's high
school sports or all school sports. They quoted a book of statistics,
the title of which escapes me at the moment.

> >Magnitudes more are killed in automobile accidents.
>
> Key word there is ACCIDENTS.

I'm not convinced it's an accident when alcohol and/or drugs
are involved.

> > Punish the criminals, not the guns.
>
> How do you "punish" an inanimate object?

By sending it through a buzzsaw like they did in Australia.
If you don't believe that's punishment, how would you like
to be sent through a buzzsaw?

Some anti-gun nuts seem to think guns have a will of their
own.

My bet:
is that Jeffrey finds the offending 10-10 number belongs to K5BO who just
bought a new bug...

We have a gazillion repeaters here and very few don't depend on the
grid. There are specific repeaters which are up & running when the
lights go out because they are located in and integrated into county
emergency services dispatch centers where the lights never go out.
When somebody needs emergency services we don't fool around, we go to
one of those machines. Nothing of value is lost if the rest of the
machines go quiet.

I had one of those, the guy was misbehaving on 75m with my call maybe ten years ago. The only equipment I'd had on the air for years was my 2m FM xcvr in the car. Some w4 called me on the phone outta nowhere one nite and started reaming me. I told him it couldn't be me, "go DF the guy or get the monitoring station to DF him or something, not my problem." Never heard any more about it.
>

There really isn't anything you can do about except to alert the FCC. Unless you go out galloping around with loops. Ain't worth it.

It definitely helps when one of the local phone co managers is a ham and club member as was the case when I got these several years ago (he's since transferred). They are replaced on a schedule apparently, to forstall failure and were sold to us at salvage price, same as a dealer would pay. I'm sure it varies widely as to how local phone co people handle them. I'd find a local larger battery salvage place and ask them if they ever buy salvage phone co (or railroad) batteries. If so, offer them a good margin above their scrap price for the next ones, and follow up by checking back with them regularly until some show up.

There are a lot of slower CW ops on the air these days, and that's the way one gains skill and gets comfortable working it. When one finds that it still is actually a useful mode then it seems to help it to be more fun as well.

Really? How do you know? I'd wager the percentage of skilled CW ops far exceeds the percentage of skilled No coders.

Unfortunately, this is far from true in the world of amateur radio!

You only have to take a cursory glance at some of the pages on our club site, to see that this is possibly the norm, rather than the exception. There have been numerous cases of serious damage to vehicles, a lit Marine Distress Flare thrown through a window, death threats, physical damage to radios, assault etc. Of the more bizarre incidents, a serving West Midlands Police officer was witnessed by several people assaulting our club president, Nigel Hopkins, G1XYU, 2 serving West Midlands Police assaulting an LPWS member whilst he was incapacitated in a barber's chair, having his hair cut in Halesowen, still a further incident with a serving West Midlands Police officer that eventually caused his "retirement on medical grounds" Police slang for "The Sack"!
Aerial cables have been cut, family members harassed the list goes on and on!

Radio amateurs are the most stupid and narrow minded section of low achieving social mis-fits you are likely to find. Everyone has a list of enemies, we are just offering a way to have a little fun with no come-backs.

The email program to use is called Easy Mail Sender, download it from any of the Free Software sites listed on our site. Use any from address, usually a deserving enemy is suitable, enter the recipient's email address, add the message and title plus any attachments and off you go. You can follow this up with a threatening message from the recipient to the sender, all good fun, and it just shows how vulnerable email really is.

More fun than just keying your mike over people, the usual weapon of the "sensible" radio amateur!

rec.radio.amateur.policy:18610 rec.radio.shortwave:30648

Was listening in the advanced portion of 75 last night to an rountable of 8-land stations. One topic that was discussed was the possibility that this year may be the last year for the Dayton Hamvention to be held at the Hara Arena. Reasons stated was that the owners of the Hara have been seeing revenue drop below the bare minimum for profit margins, not only due to the continued drop per year at the Hamvention but cancellations and moving of other events that the Hara hosts throughout the Year. To put it plainly, the word is that the Hara Arena will be sold to developers before November 2001, who then plan to demolish the site and put up an upscale condo complex with an associated shopping center on the site. The Arena has outlasted it's intended life and is now a financial liability to it's owners, so that means it's "time to sell". Anyone know any more about this ??

That was in late summer, 1999. Less than two years ago. Not ancient history by any means.

> Local Cell Phones were out and voice communication
>(HF) was nearly impossible to copy.

Similar problems were encountered during the ice storms in the Northeast back in 1996 or 1997. The emergency was regional, not local, so VHF/UHF could not do the whole job. Poor conditions, low power and jury rigged antennas made signals weak, and auroral effects made what was left difficult to copy. CW was often solid copy when SSB was useless.

>CW was just another "tool" in the
>toolbox that made communications possible.

Agreed! But some folks want to ignore any tool that isn't used every day.

A friend of mine is an "organization freak". Always after me to get rid of stuff, 'specially things that aren't the latest technology or fad. Latest buzzphrase is "if you haven't used it in the last six months, you'll probably never use it, so get rid of it".

About the tenth time I heard this, I came up with a short list of things I hadn't used in the past six months:

- Spare tire
- First aid kit
- Fire extinguisher
- Manuals for appliances and computer
- Life, auto and homeowners insurance policies
- Lawn mower and several other gardening tools

So far, no more organizational buzzphrases.

I think you are confusing two different shows.

As I recall, "Danger Man" (starring Patrick McGoohan as John Drake, British secret agent) was the original series. They are all B&W. It was a straightforward Cold War cloak-and-dagger spy series.

It was followed by "Secret Agent", also starring Patrick McGoohan as John Drake. Many if not all of them are in color, and as the show progressed Drake becomes more and more cynical about his job. He begins to question some of the things he is required to do by his bosses.

Then in 1967 came one of the most unique series television has ever seen. Patrick McGoohan created and starred in "the prisoner" (the lack of caps is intentional). He plays a disgruntled British secret agent who is finally so fed up that he resigns. Great stuff.

>change in the Amateur Radio Service regulationsor licensing structure.
>
>   As usual, trying to have his cake and spin it too...........

False. Radio regulation changes have been on-going in all US radio services. In the case of the US amateur radio service such changes have reinforced the morse-privileged classes, created an even-larger class distinction by increasing the number of license classes, made bandplans on HF not covered by the ITU-R (most of which favor the "higher" classes). The morse code test has never left license examinations for any class having below-30-MHz operating privileges and the prominent membership organization has made it a policy to discourage any elimination of ITU-R S25.5.

The ex-officio standards and practices in US amateur radio have been encouraged by the ARRL as those that were established in the 1930s and 1940s. Publicized activities have, up to the recent past, encouraged the epitome of amateur activity as CW on HF using ready-built radio equipment.

That's what I have stated in the past, that is what I still state now. There is some sign that the ARRL general policy is beginning to change but they still encourage operation on HF over and above any higher bands and still relegate experimenters and innovators to forums in other venues.

Oh, my, here we go again... :-)

I've been a radio-electronics professional since 1956. Am I good at
what I have done and still do? Past employers have said so,
present contractors say so.

>   Obviously a too-ignorant "group" since it's been possible to be a
>licensed Amateur Radio operator for over a decade now.

Quite a number of decades. :-)   Since 1934 under the present
FCC, making it something like nearly seven decades.

>>>I *desire* many things that
>>>I'll never achieve unless I apply myself toward obtaining them.

>refer to, Lennie? Seems to me none of the current Commisioners, by law the
>guardians of radio law, are past mid-40-something, although I admittedly
>haven't done a "bio" on any of them.

While everyone who reads these postings by Robeson know his antipathy to the Internet and websites, the FCC maintains an extensive website at http://www.fcc.org that includes biographies of all commissioners.

Robeson has still not commented on whether or not the FCC staff or commissioners are required to have amateur radio licenses in order to regulate US amateur radio.

Since the commissioners are generally attorneys, they DO take code tests...but their code test involves law and the codification of laws.

>   If you mean Licensed Amateur Radio Operators, it further occurs to me
>that
>YOU have stated that it is the COMMISSIONERS who promulgate and enforce radio
>regulations, NOT Amaterus.
>
>   So which spin is it THIS time, Lennie?

Try taking a tranquilizer before replying, it will improve your train of thought, spelling, and attention span.

The FCC enforces civil radio in the USA. The FCC also makes available all public documents related to their regulatory actions to handle the "promulgation" part [a rather loose use of that word, but within boundaries of English...barely]. The FCC also makes regulations, changes regulations, eliminates some regulations based on citizens' input.

It is fairly well known and demonstrateable that some long-time radio amateurs think of their collective avocational group as a "fraternity" or "lodge hall" and would attempt to "rule" based on their tenure within that avocation. The PCTAs in here are just such a group. They claim "turf" and "ownership" and will enforce their personal preferences by any means possible.

>>Those who have jumped through old hoops are fully expected to
>>demand that all newcomers do the very same thing...to "measure
>>up" to their exhaulted, "superior" accomplishmentss.
>
>   Is "accomplishmentss" MORE superior than just "accomplished"..???

Irrelevant on word-correction which is not applicable here.

Prolonged denial of the obvious is not good. The same long-timers mentioned just previously insist the epitome of US amateur radio accomplishment is morse code skill. That has become an article of faith with them and they are unyielding in their demands.

>   Which one of the myriad of license changes, testing formats, or other
>regulatory upheavals of the last 30 years that I have been witness to do you
>refer to as "old hoops", Oh Licenseless One...???

Keeping the morse code test for any license having below-30-MHz
privileges, the class-distinction of the "incentive license plan," of
the reiteration that the only radio activity worth doing is CW on HF,
the in-bred urban myth generation and promulgation that amateur
radio is some kind of guild that requires a myriad of unofficial rules
of activity and tenure before "advancing" in anything are some of
those "hoops." .

>>The problem is that the FCC regulates US amateur radio, not some
>>wanna-be ex-officio "leaders" in the group of already-licensed
>>amateurs.
>
>   Then you agree that it is NOT Amateur Radio operators who perpetuate
>that which YOU refer to as a "hazing ritual"..???

I do not agree. Then general attitude of the ARRL of the past, in
both policy and publications, has emphasized morse code
ability over most other modes in US amateur radio. This pleases
the long-timer conservatives who make up a disproportionally-
large grouping within the ARRL membership. The hazing ritual
is supported by many in the fraternal sense, being something
that newcomers must do because others have had to do it.
Hazing rituals are emotional, not logical, and certainly not a
regulatory thing.

>>Up until the FCC relinquishes their regulation of
>>amateur radio ordinary citizens of the US can freely comment
>>to the FCC whether or not the ex-officio "leaders" think they
>>are "qualified" or not.
>
>   Then comment to THEM about it, Lennie. Anything in here is just ranting
>and bullying on your part...Pure and simple.

There is nothing "pure" nor "simple" about Robeson's comment.

This is, by most others, a discussion, a debate, an argument and
many of those long-timer tenure-means-ownership types are
already here. By observation Robeson is one of those.

>>The FCC has stated publicly that it does not consider a morse
>>code license test relevant to their task of regulating amateur
>>radio in 1990 and in 1999. [they are required retain that test by
>>ITU-R S25.5]
>
>   And in THIS paragraph you contradict other assertions you have made
>relative to the FCC's stance on Morse code testing and the binding treaty of
>which THEY cite as reason for retention of the code exam at this time.

There is NO contradiction. Robeson may wish to quote from FCC
90-55 or 99-412 to explain, but otherwise, in the regard of treaties
or agreements made by the USA to other governments or bodies,

there is an obligation to obey the terms of such treaties or
agreements. Obligation does not render it an absolute as in an
absolute obeyance of terms. Terms of treaties or agreements
have been "violated" in the past.

>   Regardless of what the FCC mayor may not be "qualified" to do or say,
>it's pretty evident that YOU are not qualified to address the topic with an
>INFORMED opinion.

Well-poisoning again by personal pejoratives. Not unexpected.

>
>   Here we go again. I made absolutely NO statement relative to Morse Code
>testiing....Lennie HAS to "introduce" it in order to keep his head above
>water.

US amateur radio restructuring (FCC 99-412 R&O) did NOT change
the morse code test?!?!? Of course it did.

>>Hint: The FCC authorizes US amateur radio licenses. The FCC
>>does not require either staff or commissioners to have amateur
>>radio licenses to regulate US amateur radio.
>
>   Hint: Read your own writings, Lennie. YOU state Amateur Radio
>Operators
>enforce some undefined "hazing ritual" yet you THEN misdirect the discussion
>to the lack of licensure of the Commissioners.

The FCC will accept communications from citizens on any radio
service, licensed or unlicensed in any radio service, in regards
to any radio service regulations. The FCC has to.

Many refer to the morse code test as a "hazing ritual" in the license
examination. The reasons for knowing morse code have long since
disappeared as a regulatory necessity. OOK CW is not mandated

over and above any other mode allocated to radio amateurs, so why is that code test still required as a regulatory matter?

Answer: It isn't required by the FCC as they have said in 1990 and 1999 in their Reports and Orders. The FCC is constrained to keep it because it is required under terms of membership in the ITU.

Summary: An unrequired-for-regulatory-sake regulation has no reason for existing, hence the "hazing ritual" name.

>>Again, Robeson "knows" nothing of the kind...but Robeson insists
>>on retention of the morse code test in the license examination
>>because he had to take one.
>
>   Leonard H. Anderson is blatantly lying in the face of facts to the
>contrary.

Opinions and suppositions are not "lies," they are just opinions and suppostions.

>I "insist" on the retention of the code test since it is a binding
>legal treaty obligation of which the United States is signatory to.

Good scout, gittem up with "it's the LAW!"   :-)

Now explain to everybody how the FCC "needs" that morse code test as part of its amateur radio regulatory task.

The FCC has already explained that it does not consider that morse code test relevant to its regulatory task. In 1990 and 1999.

>   And of course, YOU have tried to skirt this truth by somehow trying to
>make us believe that the United States is not obligated to honor this treaty
>and that you, a United States citizen, is not obligated to observe the
>treaty.

Nonsense, said nothing of the kind. The USA is obligated to meet all international treaties and agreements but that obligation is not an absolute for any nation. See past history of the USA and other nations since the formation of the United Nations (the ITU is a UN body).

>   Phil Kane did a superb job of setting you right on that. Again, a rant
>ruined by facts...they always are.

Robeson must have been "imprinted" by George Orwell's novel "1984." :-)

>>The rest of Robeson's message is the usual personal insult:
>
>>>   Cowardly creep.

>
>   I notice you make no effort to deny it. Good for you.

Robeson's obsession with personal insults is such a common
occurance that I usually omit commenting on them. :-)

>   Furthermore, "newcomers" have not HAD to sit for a Morse Code examination
>since February 14th, 1991.

...and the newcomers had to stay on bands above 30 MHz.

Some in here will say "that is where newcomers 'belong'"
(something proven by demonstration all too frequently).

> And to put the deathblow to your rant, Lennie,
>officials of the FCC have stated publicly that it will act accordingly when
>the BINDING treaty has been repealed.

Tsk, tsk, you should read FCC R&Os 90-55 and 99-412 with a bit
more attention to word useage. If you look close you will find that
all the FCC said was that they are still obligated to keep the
morse code test because of S25.5. Your words do not match
what the FCC stated.

>   Now...try truth and facts next time you come at me, Creep.

:-)   Guaranteed...Robeson keeps ending all of his "replies" with
a personal pejorative.

I was working with Red Cross during the ice storm of 1998 ... we used 2m for
ontario ... and most of quebec ... we were of course the most greatly
affected with Newyork getting hte tail end of the storm.

Our repeaters were all fully funtional.

SSB on 10 was quite nice.

We never once tapped a single letter out on cw.

To help rrap participants support this call to action, I have decided to make the following service available:

Ship all your offending Kenwood gear to me and I will see to its proper and prompt disposal. My address is good in the callbook.

news:9a62ol$het$1@slb5.atl.mindspring.net...

> Our 'local' multi-county Skywarn, OEM, NWS and ESDA have 2M, 440 and 220 rigs set up. Not a single HF rig...Not one key....No antenna for HF... This includes 13 counties that I know of and work with. Wow. Since I'm only a nocode tech I guess I shouldn't be helping save any lives because I don't know CW...Guess I should just 'resign' my "position" (voluntary positions that they are) as assistant Skywarn coordinator. I'll also let our nocode coordinator know and we can go back to where we were when NOT ONE CW tested "ham" would take the responsibility. Like back in 1990 when a F5 tornado took 120 lives over a period of an hour and NONE of the 4000 trained spotters (many of which were "lifesaving, CW" tested hams) bothered to make a report to the NWS and when those same "lifesaving, CW tested hams" couldn't be bothered to operate a Skywarn net. I guess they were all busy using CW to save someone in Eastern Kookamunga and didn't notice the F5.

Here an emergency communications comment filed with the FCC for the License Restructuring Decision. I thought you might be interested.

Larry KC8EPO

~~~~~~

In The Matter Of 1998 Biennial Regulatory Review � Amendment of Part 97 Of the Commission�s Amateur Service Rules, FCC WT Docket 98-143

FCC Secretary Magalie Roman Salas
Office of the Secretary, Federal Communications Commission
1919 M Street N.W. Room 222
Washington, D.C. 20554

Public Service is the basis on which the amateur Service license has been authorized since its inception. This is the aspect on which the commission is urged to focus, and which we here address, as follows: (1) license privileges and classes, (2) testing requirement (code), (3) RACES Station licensing, (4) Amateur operation.

Background And Basis

Since 1985 California has had an aggressive program utilizing Amateur licenses. That year the state legislature mandated a paid staff coordinator with directions to enhance and expand that public service function involving amateur licensees. In April 1985 we began a series of education bulletins statewide at a time when there but three RACES units in the state. Today almost all of the 58 counties have an emergency communications unit based on the Amateur licensees; and our weekly EMCOMM Bulletins have would-wide distribution in addition to every state in the country.

In so far as we know, our program � the leader in the nation � is the only
~~~~~~

one with a paid staff position created by the state legislature to support the use of Amateur licensees in service to their communities.

In 1987 the American Radio Relay League requested that the statewide Bulletins be placed in the Amateur packet radio networks around the U.S. In time they became the standard in the US, replacing s defunct FEMA education program. Today these Bulletins are the source of education information for emergency communications units based on Amateur Radio. They are literally on hundreds of bulletin boards and Internet sites around the world.

Because we are involved daily with quintessential public service � their use in and for local government, we have a broader experience of Amateur license activities that than most petitioners. Our program is the recognized model in the U.S., Canada, Australia, New Zealand, England and other countries worldwide. The weekly EMCOMM Bulletins are on the worldwide Web at www.acs.oes.ca/ . Our Manual, titled the �establishing and maintaining an Emergency Communications unit for government�, is the only one of its kind in the country.

(2) Testing Requirement (4) Amateur Operations

In the 1990�s very significant changes have occurred affecting the usefulness of Amateur radio licensee to government. Today we face information systems that did not exist in the past. As we look to the year 2000 we need Amateur licensees capable of providing a variety of services in communications, typically computer based.

Thus, the use of code has declined to where it is no longer viable for government.

a. California eliminated the use of CW some years ago. Although we have a large and extensive communications center staffed for and with Amateur licensees, we had not used CW in decades. We retained a CW net until 1995, but it served no essential purpose, just once-a-week training for 3-5 participates. No county governments participated for years.

b. The US Coast Guard also eliminated the use of morse code several years ago, which is further evidence of its lack of applicability to today�s communications needs.

Today, our information systems are based computer based and operate by both wire and wireless. If the Amateur of today is not familiar with computers he/she is of little use. A background in computer experience and knowledge is far and away more important than that of CW.

When I became licensed in 1941 Amateur radio was the means of alternative communication. Today, the computer provides that, hence thousands of those who would otherwise be FCC Amateur service licensees never apply because the service does not attract them. Until we recognize that factor the service will not grow significantly, nor do we get the new blood of technically oriented people to spark the new innovations so badly needed.

To make matters worse, to a large degree an �old-boy network� exists in Amateur radio; one that grew up with �you must pass the code� concept. Like people everywhere �what�s good enough for me is good enough for you� is the mindset of many of today�s Amateurs. Without the ability to look to the future, or grasp the many changes occurring around them, they would keep practices long since useless. In government today we pass data digitally, not by CW or voice radio. In fact, there are government agencies who seek to do away with radio entirely.

One of my constant battles is to keep some radio capability functioning in government. There is a new breed of administrators who focus on the bottom dollar, not redundancy. Often they have no experience in communications failures, and their digital computer networks have not failed. They see no need for radio. So, they no longer fund or support radio programs. The federal Highway Authority (FHWA) is one instance of an agency that no longer supports High frequency radio. It�s a very real every-day battle. Our fiscal year has just begun and yesterday I was informed that there are no funds for communications equipment as it all went for computer systems.

So, I urge the reduction of code requirement to 5 wpm at general license level as it is not essential skill qualifier in today�s world. When it is possible to do so under international radio regulations, I further urge the Commission to drop the CW requirement entirely. It is not relevant to the year 2001 and subsequent real-world needs in communications.

(1) License Privileges and Classes

The proposed classes (no-code Tech, General, Advance, Extra) are appropriate. There is a shortage of people above the tech license interested in emergency Communications. It has been the Tech licensee�s that have made our programs possible. Without them the programs would flounder. There are exceptions, but in general it is the Technician licensees we rely on today. Due to the shortage to those qualified to operate HF we have to put a higher qualified licensee with them just to staff HF circuits.

I urge the Commission to adopt a requirement of computer ability, at least at the general level. Knowledge of technical digital information is not important. There may be those who will assert that test should include questions on Amtor, Pactor, Clover or such. The problem there, however, is that such modes are already out-of-date. To lock the testing into them is already a decade behind the times. What we need is young minds open to new possibilities, not old minds locked in decades old minsets. There are enough computer specialist around that its� easy to find them and they don�t need Amateur licensees to fix technical problems. In fact, it is their interest in the technical aspect of computers that have draws them away from Amateur radio.

I recommend that the licensee demonstrate the ability to use a computer; that is, demonstrate operating ability in word processing program, in a text-editor, how to use eMail and how to use communications programs. These are skills that need demonstrating in person, in lieu of the code test. It will be difficult to have multiple choice or yes/no questions to uncover these skills. Have the applicant demonstrate ability on his/her computer or one by owned by the examiner. It�s not too difficult to set such a standards as it is required of countless job applicants these days. An alternative is some of certification by a computer user group as to demonstrated skills.

(3) RACES Station Licensing

I urge that the provision for RACES station license be dropped. Few exist. Those that do should not be renewed. With today�s easy availability of callsigns, the purpose of calls for government EOC�s is simple. Here we formed a club to support the state activities and got licenses for each of the state�s regional EOC�s. It�s not quite the same, but it works.

The disadvantage of the RACES station license is a provision in the current regulation that has been misapplied. (see.......) This provision should be dropped. Specifically, that section states that a Races Station (defined in ....) cannot talk to another RACES station. Legally that means two RACES stations LICENSEE. However it has been interpreted to mean that any Amateur licensee operating in the RACES (mode or activity) cannot talk to any Amateur licensee operating in a non-RACES activity. For instance, during the 1970�s a FEMA employee critized one of our California amateurs for allowing a Amateur operating in a RACES activity to call and talk to an amateur for a club (non RACES) who had telephone capable of solving a need. The FEMA person did not understand that it only to a RACES station licensee.

At this point in the solar cycle night time isn't the best time for 10m.
Try turning it on in the morning when the EU stations nearly peg
S-meters. You might want to keep listening to the radio preachers so
that you can learn to love your neighbor as we have learned to love the
occasional Canadian with the anti-Yank attitude.

I could have sworn that you wrote "seeming intolerance". There is
either a seeming intolerance or a real one.

> Witness your own intolerant remarks as a bona fide PCTA.

I'm not intolerant toward those amateurs who have not passed a code
exam. I work quite a few on 2m each week. That doesn't mean that I am
in agreement with the whole code free license scheme. What's your
schtick? You've had decades to obtain a ticket and to date haven't even
come up with one of the non-code variety. Is you is or is you ain't
interested in ham radio?

> >Why should the policy arguments against amateur regulation changes
> >stop? The policy arguments for amateur regulation change haven't

So you believe that one side should remain mum but that the other side should remain vocal?

Heil does voice his grievances as does Anderson. Anderson pontificates
and condescends. Anderson does not confine his arguments to the subject
but personalizes them based upon his opinion of those who disagree with
him. Anderson speak with forked tongue.

> All of radio has evolved over the decades...with a considerable

> He has Spoken.

Mental foot-dragging? Now we've got a brand new concept! Thanks for
re-stating the obvious concerning change within all of radio. I don't
know what we'd do without you.

When I entered amateur radio and each time I've undertaken an upgrade of
my license class, I set about to meet the qualifications for that
license. At no time did I demand that those standards be lowered for my
benefit nor did I put off obtaining a license until such time as the
powers that be made the entry into amateur radio easier. What's your
personal holdup?

At least I have a "we-we" to shake, Lennie. And it does NOT indicate that I "represent all of US Amateur Radio".

It does put me in the majority. A majority of which YOU are not.

>Oddly, that "acceptance" is not universal in here. A number of
>staunch and starchy PCTAs differ with that opinion

I am sure they don't. However as previously pointed out, the representation here is a fraction of 1% of the overall Amatuer community.

While acknowledging the lack of objectivity of my own opinion, it would appear that it is in congruence with that expressed in much of the Amatuer media.

>Say hello to all your other multiple personalities, Robeson. I don't
>want to overlook any of them...

What was that you were saying about others making personal attacks...???

Seems that admonishment only fits when it DOESN'T mean YOU!

Not that we expected anything less.

Putz.

Bully for you! :) Maybe you'll grace the amateur bands with your
presence as part of your semicentennial celebration :)

You only have problems with those who enjoy the traditions of the
amateur service you are not a part of :)

> All I am advocating is the elimination of the morse code test
> for any class of amateur radio license. That sort of thing results

> "hazing ritual."

All I am advocating is the retention of the morse code test for HF
amateur radio access. That seems to result in hostility from you. What
you call a "hazing ritual", I call "a fine and useful tradition". To
you and the "others" you mention (do you speak for all of the unlicensed
or are you shaking your "we-we"?), a hazing ritual is anything you
haven't mastered.

> The technology of radio has advanced far since I first began

> amateur should possess. To what end for a hobby?

I've seen little evidence to suggest that what you say is true.
Amateur radio has advanced but has retained some proud traditions.
You seem to have a problem with anything which smacks of tradition.

> >In any case, I will take your

> >suggestion as to letting the folks who wish to get into the hobby set the

> Right now the FCC sets the regulations for US amateur radio.

Right now and for many decades. I'd guess it will do so for many more.
Thanks for restating the obvious (for the umpteenth time).

> Neither the staff nor the commissioners of the FCC are
> required to learn morse code or test for any amateur radio
> licenses.

...and this is nothing new. There has never been a requirement for the
staff or commissioners to obtain an amateur license. My state DMV
doesn't require clerks to be licensed drivers. The clerk who issues
marriage licenses isn't even married. Go figure!

> The FCC says publicly that it will accept input on
> regulation changes from any citizen. There exist a rather
> large number of us citizens who are not licensed in the US

> technology, radio operation, radio theory, and electronics in
> general.

Us? Are you shaking your "we-we" again? Do you speak for all those as
yet unlicensed? You can't simply declare yourself competent in radio
and electronics in order to become a radio amateur. You pass an exam.
That's the only way in. What is your holdup?

> I do thank you for your civil support. It is an agreeable
> even pleasureable sight to see someone who will not insult
> or demean someone simply because they have differing
> opinions.

Len, that isn't the reason you've been insulted or demeaned. Your tone
and condescending manner get you insulted and demeaned. You might as
well wear a "kick me" sign.

> >In any case, I will try and keep my future

There's that mastery of restating the obvious again.

> There should not be any reason to think that an "amateur"
> is demeaning...yet many amateurs will not hesitate to
> demean professionals. You have no doubt seen evidence

Likewise, many professionals will demean radio amateurs. I've seen evidence of that in here too. I've worked in both areas and have heard many more supposed professionals demean radio amateurs than vice versa.

>Now, now, Brian. Let's not get into the professional area again
>where you want to argue "legality" of an ENGINEER title prior
>to receiving a degree (most of my career)

Yes, Brian...nothing like nagging little details about legality. Lennie doesn't like legalities. They interfere with his rants.

>Yes, I was an electronics technician prior to 1964. The interesting
>part is that industry doesn't need all the anal-retentive
>"qualifications" and "licensing" you insist on in order to DO THE
>WORK of engineering or in assuming responsibility of pass or
>fail of a work task

Oh, I SEE! So, by virtue of doing the WORK, you are justified in claiming the TITLE...! ! ! !

I can teach you (well, I MIGHT be able to teach you...) how to start an IV or use a defibrillator. Neither task, even though they may be done correctly, would make you a Nurse or Paramedic.

>One has only to do the job, show capability,
>accomplish the task successfully, and be rewarded with a good
>salary.

I see....Well, THAT being true, Lennie (YOU said it...it MUST be true...) you may refer to me as DOCTOR Robeson from now on.

>In radio as well as electronics.

Radio is NOT electronics?

>What "credentials" or "licenses" are needed to discuss law,
>regulations, or rules of government?   Answer: NONE in
>open forums or assemblies of citizens.

The same "credentials" it takes to be an annoying putz. Ergo you have two "accomplishmentss" to your credit.

>Kelly seems rather upset that any plain, ordinary, unlicensed-
>in-the-amateur-radio-service citizen DARES to comment on
>amateur radio regulations!

If you limited yourself to "policy" or "regulations", chances are there'd be no argument. However you insert your uninformed opinion into arenas of whcih you obviously have no experience.

Again and again and again..............

>are trying to misdirect the argument by going to a special case
>only for radio amateurs.

Yeah, Brian...and that's no doubt what eats at His Licenselessness. Now any 10 year old that can memorize the question pools can obtain the same GROL Lennie "used" to have, and many DO have in the Amatuer service.

>You seem to take anything against CW in amateur radio very,
>very personally.

No...he just takes your insults personally...especially since you DO direct them at HIM.

> So much so that you wish to deprive all
>newcomers any access to HF via a no-code license?

Another Lennie "misdirection". Nice try. Ineffective, but nice try.

>Who is the "sad" one now?

The wimpering old man in SoCal with his nose pushed up against the Amatuer Radio window muttering to himself "I cudda been a contender...I cudda been a contender..."

>A rather nice demonstration of eliteness, of self-proclaimed
>"ownership" of an avocation. If you were so "busy" you need not
>have replied at all.

I am sure you'd like to be left alone to purvey your smut. Not likely.

Theory is only one portion of amateur radio, Len. Operating ability
makes up the rest. A EE who is a poor operater is still a lid.

> >amateurs who have been around for decades.

>
> There is no "musing" about Heil being a PCTA, a mental old fart,
> an amateur conservative who opposes change.

More of your civil debate tactics? Your words suggest that anyone who disagrees with your view is "a mental old fart". We had a neighbor in Florida back in the 50s who began, after his retirement, writing numerous bitter, lengthy letters to several newspaper editors in which he railed about anything he perceived as an injustice or an affront. You remind me of him.

> >Your *desire* as a non-radio amateur has little to do with anything.
>
> It is not just my desire, but rather a large group of others who

Shaking your "we-we" again? For whom do you speak?

> Unless there has been some major revolutionary changes in the
> US Constitution, ordinary citizens can and have commented to
> their government in regards to ALL laws, regulations, and rules.

You've done it and no one has stopped you. Now tell me why I have to take anything you say as gospel? After all, you have no credence in amateur radio circles.

> Heil's "desires" seems to be that of trying to act as a sort of

I claimed no superiority. It is merely that I am currently enjoying my time in amateur radio while you merely rave about the things which apparently keep you out of it. You can be a doer or you can be a talker. You seem to be a talker.

> >Those
> >who might want to get into amateur radio might have to meet the

I expect you to meet the current requirements for obtaining a license. You have a no code venue open to you. You have not, for whatever reason, met the requirements for such a license. A 5 wpm code test buys you an HF license. You've not tackled that. Maybe by the time your professional radio semicentennial rolls around you'll grace us with your presence....but probably not.

> The FCC has stated publicly that it does not consider a morse

> ITU-R S25.5] Does Heil think the FCC is "not qualified" to
> regulate US amateur radio?

Do I think that most commissioners are political animals who no little about their craft and who depend upon staff for their knowledge? You bet I do. Do I think you'll have to pass a morse test for HF amateur radio access for at least several years? Yep. Are you going to try to out wait the morse exam? Good luck.

> radio" because he is licensed in it. Null reasoning.

If I wanted to learn about horses, would I talk to a guy who raises
horses and who rides them or would I get my information from a guy who
once read a book about horses? What can you tell me about amateur
radio, Len?

> The FCC regulates US amateur radio. Neither staff nor
> commissioners are required to possess amateur radio licenses
> in order to regulate US amateur radio.

This has nothing to do with anything. Your record is stuck.

> By Robeson's logic, the FCC cannot possibly do its chartered
> task since only a few staffers have amateur radio licenses.

Aside from enforcing the regs on the books, the FCC was pretty content
to let amateur radio alone. For a number of years the commission even
skipped the enforcement of the amateur bands to great extent. Even at
that, the Commission is the authority on *regulation*. You, on the
other hand, are not.

Sure you do, that's why you've spent so much of your time doing it.

If you want it done, get off
> your butt, learn something new, and do it for yourself.

You're the character making all the claims on how easy it all is. So
why don't you prove it by doing it? Answer: Cecil obfuscates every
chance he gets.

By that logic it doesn't make sense to require ham radio licenses since
hams are required to do nothing whatever after passing the test.

>Poor Robeson. He cannot argue a subject, he can only argue
>personalities.

Lennie, read this loud and clear...the "debate" on code testing is OVER for anyone with an IQ over 27. This barely includes you. There is only a code ARGUEMENT, which you seem to enjoy perpetuating.

>Robeson keeps claiming he "knows what is best for US amateur
>radio" because he is licensed in it. Null reasoning.

And Lennie, allegedly a college graduate, puts into quotation marks a statement he attributes to me.

This makes it a lie. Another lie. Not unexpected.

>By Robeson's logic, the FCC cannot possibly do its chartered
>task since only a few staffers have amateur radio licenses.

More baseless assertions. Not one line of retrieveable proof from ANY archive to substantiate another Leonard H. Anderson lie.

Lennie, what would some of your old cronies "on the job" think if they saw how you behave? Liar and bully. Some end to a career, huh...???

>That is Robeson's poisoning of the well. My arguments in here,
>when there are individuals who care to argue subjects rather than

>personalities, are simply to eliminate the code TEST for any US
>amateur radio license examination.

If only this were true. Lennie might have a point. But as usual....

>Unfortunately, some poor souls such as Robeson, need some
>sort of outlet for their frustrations so they attack, fight, become
>aggressive, mean-spirited, loutish, and generally act the asshole
>by going after personalities.

Ah...back to the profanities again. Once again, Lennie forgets that profanity is the last resort of the childish mind. Of course it's not when HE does it......(yeah...right)

>That is verifiable by anyone wishing to contact KD6JG or W6MJN

Perhaps we should copy some of your "enlightening" posts and let your "friends" in on how you REALLY act in public. Or that you USE them to somehow validate your conduct as acceptable.

"Gee..some of my best friends are Hams...."

>He made some vague claims of being involved in aviation
>electronics while in the USMC but nothing specific stated.

A matter of public record, and unlike you, I feel no need to recite page's long CV's in order to bully others.

>He then became a licensed practical nurse, no doubt inspired
>by some love of healing the sick (we have all seen that
>represented in here). That second career was suddenly
>terminated, claiming "burn-out."

Terminated? Hmmm...the hospital I worked at last night will be surprised to hear that....As will several others.

And as for "burn out", well, all I can say is that until you deal with the death of a family member and then try to balance that with a profession wherein you must capably balance your own emotions in such a way as to not negatively impact your dying patient or thier family, you have NO frame of reference in which to make an informed opinion.

Once again...Another topic on which you assert your snide, insulting self without any real, practical experience.

Quite a trend.

>A third career was begun as
>a purchasing agent (Antec Corporation, in Georgia) which
>involves living away from home during working days.

Again, I don't work for Antec. But you keep on trying, Lennie.

>Robeson's "authority" on amateur radio matters consists of
>being licensed as an Extra class radio amateur for some
>time, no other "authority" or "qualifications" in that regard
>other than some tenure in that class.

Never claimed any "authority". Unlike YOU, however, I DO have EXPERIENCE in Amateur Radio.

>More well-poisoning. My arguments have tried to remain on
>the subject.

Yeah...I can see how analogizing persons who don't share my opinions with Nazis is "on the subject".

>AOL (one of my ISPs) allows up to seven screen names (handles).

Yes...and you use them to dilute your postings. And no doubt use the OTHER ISP's that you allude to to create the fictional and anonymous posters in this NG who occassionally come to your "defense".

>Robeson thinks that all non-amateur screen names are not suitable
>for the tender eyes of ex-military, ex-nurse purchasing agents who
>are licensed in the US amateur radio service.

I am not "ex" anything Lennie...Not until they nail the box shut, anyway.

>Tsk, tsk. Robeson attempting to do more well-poisoning

I am sure you wish it were so simple.

>>If he can't find it on a website, he has absolutely no Amateur
>>Radio experience base upon which to make the frequent attacks >>against
Amateur Radio that he makes in this forum.

>More well-poisoning. Robeson assumes the imperial mantle of
>Representative of All US Amateur Radio!

Please disprove my assertions, Your Putziness.

>Robeson is licensed in US amateur radio. Unfortunately, he takes
>that as the "authority" to claim that all who are not so licensed
>have "NO" knowledge, experience, love, or anything else of or about
>amateur radio.

"All"...? Nope. Just you. And that's simply from YOUR assertions of non-participation. And of course, the numerous posts you have made over these many months in which you (time after time) make very glaring and obvious errors in that whcih any ACTIVE Amateur would know to be erroneous.

>US amateur radio is one of the most open and visibile and audible
>avocations, so much so that regulations forbid codes and ciphers
>intended to obscure communications.

A Lennie the Limp "misdirection". No "codes" or "ciphers" mentioned in any post previous, but he must divert the conversation to some obscure course.

>There is no "secrecy" involving the radio hobby
>other than in the twisted mentality of a few who NEED the
>status symbology of authority to show they are "better" than
>others.

No one said there was. And as for "NEED" to demonstrate authority or how "better" they are, well, all I can say is that your years of badgering Amatuer Radio operators in this forum is glaring evidence of that.

Ed Hare is better than you, Lennie. He proves it on a daily basis. So is Jon Bloom, Phil Kane and a litany of others, simply by virtue of thier DAILY contributions and acknowledgement by the Amatuer community as a whole of thier conributions.

What have YOU contributed? A few technical articles in a long-since defunct Amateur Radio periodical?

>The "battle" exists only in certain minds

In this we agree. For you it is a battle. You frequently accuse me and others of this, yet you are the only one who perpetuates the mindset.

>The "battle" is against the elite, not the avocation in general.

The people you seek to "engage" are not generally in this NG. You are on the wrong "battlefield". The "fight" is in the editorial pages of QST, CQ, Worldradio and other periodicals. Some of us have made use of that medium. (Please see Nov 99 "Worldradio")

You have not.

And as for "battl(ing)" the elite, judging by popular opinion in those REAL sources, you ARE battling the "avocation in general". That opinion IS changing, but it is doing so WITHOUT you, Lennie.

Life marches on. And in this case, without Lennie.

Yeah, right! Both you and Cecil get caught sending code in the very fashion of pre-Novices, tapping on a key instead of doing it in a correct manner - oh so typical of codehating dunces and immediately you start the running backwards. Now it's "we said that was just the sound" Right. Idiots au pair.

And I was doing it before I was a nurse...Gee, how did THAT happen..???

>Robeson has claimed all kinds of "knowledge" in electronics
>engineering by being a purchasing agent but is not tasked at
>Antec to be responsible for actual engineering.

I never claimed any knowldege in engineering in ANY discipline. I did cite a passage from an EE-specific periodical that refuted another one of your rants. Cited the periodical bu name, volume, page and the specific passage.

And I don't work for Antec.

>Tsk, tsk, not many claims to "practical
>experience" in US amateur radio on Robeson's side, are there?

Ten minutes on any Amateur band in any mode is ten minutes more than you can justifyably claim, Lennie.

>Nonsense. Perfect direction

Redirecting the misdirection. Lennie spins a mean bottle.

>>Your rantings in HERE amount to nothing more that intimidation and
>>bullying.

>Well-poisoning. Robeson continually jumps in obsessively on
>any subject I address regarding the comment of another. THAT
>is bullying. THAT is intimidation. Quod Erat Demonstrandum.

I am sure you believe that. You must in order to justify your behaviour.

QED to be certain.

>test as part of its amateur radio regulatory task.

Don't need to. I never said it did. You did.

>The FCC has already explained that it does not consider that
>morse code test relevant to its regulatory task. In 1990 and 1999

Gee, Lennie, when >>I<< state that the FCC has made those very same comments, YOU tell me that it means nothing, that it's only some bureaucratic ramblings.

More cake and eat it syndrome.

>>And of course, YOU have tried to skirt this truth by somehow trying to
>>make us believe that the United States is not obligated to honor this
>>treaty and that you, a United States citizen, is not obligated to >>observe
the treaty.

>Nonsense, said nothing of the kind.

I defer to Phil Kane. You very specifically stated that you were not obligated to observe non-American law since you are a US citizen on US soil. Spent several exchanges with him trying to argue the law that HE is expert at. It WAS hillarious, Lennie.

>Robeson's obsession with personal insults is such a common
>occurance that I usually omit commenting on them

As you should. There's no defense for your conduct, save a diagnosis of mental defect.

>> And to put the deathblow to your rant, Lennie,
>>officials of the FCC have stated publicly that it will act accordingly >>when
the BINDING treaty has been repealed.

>Tsk, tsk, you should read FCC R&Os 90-55 and 99-412 with a bit
>more attention to word useage. If you look close you will find that
>all the FCC said was that they are still obligated to keep the
>morse code test because of S25.5. Your words do not match
>what the FCC stated.

I know this will come as a surprise to you, but the FCC DOES comment in more forums than R&O's and NPRM's, Lennie. Perhaps you'd find some new revalations if you read some of them...?!?!

>Guaranteed...Robeson keeps ending all of his "replies" with
>a personal pejorative.

You make it so easy. You continue to act the fool. You get treated like one. No problem.

>Robeson has still not commented on whether or not the FCC
>staff or commissioners are required to have amateur radio
>licenses in order to regulate US amateur radio.

Yes I have, Lennie, and in no uncertain terms. You simply choose, as you do with so many other facts, ignore them.

>> Is "accomplishmentss" MORE superior than just >>"accomplished"..???

>Irrelevant on word-correction which is not applicable here.

I see...Once again, it's "relevant" when Lennie does it...not when HE is corrected.

>Prolonged denial of the obvious is not good.

A bit of your own advice you should follow on occassion.

>> Which one of the myriad of license changes, testing formats, or other
>>regulatory upheavals of the last 30 years that I have been witness to >>do
you refer to as "old hoops", Oh Licenseless One...???

>Keeping the morse code test for any license having below-30-MHz
>privileges, the class-distinction of the "incentive license plan," of
>the reiteration that the only radio activity worth doing is CW on HF,
>the in-bred urban myth generation and promulgation that amateur
>radio is some kind of guild that requires a myriad of unofficial rules
>of activity and tenure before "advancing" in anything are some of
>those "hoops." .

(1) per your own admission the FCC is bound by international treaty to continue to require a Morse Code test. The FCC has said it is bound by that treaty. So HOW does any ARRL (or any other entity) "policy" affect that?

(2) No one has to accomplish ANY "hoop" exercise to advance in Amateur Radio. Just take the relevant FCC required exam. Period.

Unless you can prove otherwise? The name of someone who can testify that they were not allowed to obtain an Amatuer radio license as a result of any "hazing ritual"...Forced at gunpoint to participate in some midnight fraternity initiation in order to be admitted to the testing session?

>I do not agree. Then general attitude of the ARRL of the past, in
>both policy and publications, has emphasized morse code
>ability over most other modes in US amateur radio. This pleases
>the long-timer conservatives who make up a disproportionally-
>large grouping within the ARRL membership.

Of course you would not agree. It would ruing another LennieRant.

And as for "disproportionally large grouping", since when has it been illegal or inappropriate for a group of like-minded persons to associate under the banner of a membership organization?

That's like saying the ACLU shouldn't be considered a credible civil rights organization because there are so many left-wing minded members in it's ranks.

>The hazing ritual
>is supported by many in the fraternal sense, being something
>that newcomers must do because others have had to do it.
>Hazing rituals are emotional, not logical, and certainly not a
>regulatory thing.

They can support anything they want. Yet no one has EVER been denied access to a test session for lack of evidence of having completed some "hazing ritual". Even you could show up at a test session today and sit for an Amateur exam without providing anything more than proof that you are who you claim you are and the required testing fee.

>> And in THIS paragraph you contradict other assertions you have >>made relative to the FCC's stance on Morse code testing and the >>binding treaty of which THEY cite as reason for retention of the code >>exam at this time.

>There is NO contradiction. Robeson may wish to quote from FCC
>90-55 or 99-412 to explain, but otherwise, in the regard of treaties
>or agreements made by the USA to other governments or bodies,
>there is an obligation to obey the terms of such treaties or
>agreements.

So here we are again. Lennie at first claims that Amatuer Radio operators are holding everyone else's feet to the fire over testing criteria, and then he states that it IS a treaty obligation and the FCC is bound by law to do what it has been doing all along.

>Obligation does not render it an absolute as in an
>absolute obeyance of terms. Terms of treaties or agreements
>have been "violated" in the past.

I have travelled over 55MPH before too. Does that make it legal? Does it justify doing so in a school zone?

>> Regardless of what the FCC mayor may not be "qualified" to do or >>say, it's pretty evident that YOU are not qualified to address the topic >>with an INFORMED opinion.

>Well-poisoning again by personal pejoratives. Not unexpected.

I am sure you consider it so. It nonetheless is correct. You do not have any requsite experience in order to make an INFORMED opinion.

Did you think I meant "penis?" Tsk, tsk, jumping those conclusions again, aren't you?

>And it does NOT indicate that I "represent all of US Amateur Radio".

The royal use of "we" in voicing an opinion most assuredly says you do.

>   It does put me in the majority. A majority of which YOU are not.

A majority of what? Credential freaks? Control frieaks? Mental obsessives who are unable to civilly discuss, debate, or argue a subject without tossing in constant personal pejoratives?

I am no such "member."

>   While acknowledging the lack of objectivity of my own opinion, it would
>appear that it is in congruence with that expressed in much of the Amatuer
>media.

Translation: Brainwashed.   :-)

>   Putz.

Now, now, Yiddish you ain't. But you still have this obsessive need to insult the person, don't you? Why is that?

>>only for radio amateurs.
>
>   Yeah, Brian...and that's no doubt what eats at His Licenselessness. Now
>any 10 year old that can memorize the question pools can obtain the same GROL
>Lennie "used" to have, and many DO have in the Amatuer service.

Poor baby, no English comprehension. I tested for my First Class Radiotelephone (commercial) license in 1956. There was no "GROL" back then, no exact question pool answers, some parts of the written were essay and diagram-drawing, done at an FCC office. Yes, the present-day commercial radiotelephone test is a bit easier. How does that take away any of the original accomplishment?

Interesting thing. Back over a year ago, Robeson expressed an opinion that a GROL was not to his liking, did not seek to add a commercial radiotelephone license to his list of "qualified accreditations."   :-)

>>You seem to take anything against CW in amateur radio very,
>>very personally.

>been a contender..."

Sorry, I don't do Marlon Brando imitations (from "On the Waterfront"
released some time in the fifties).

Robeson has a vivid imagination...and unable to believe that anyone
else has experience in HF radio outside of amateur radio.  Big
leagues HF communications, 24/7 duty, military, also back in
the fifties.  Also other-spectrum communications, VLF to
microwaves in the sixties, seventies, eighties, and beginning of
the nineties.

>>A rather nice demonstration of eliteness, of self-proclaimed

>     I am sure you'd like to be left alone to purvey your smut.  Not likely.

Oh, my!  Advocacy of elimination of the morse code test in US
amateur radio is "SMUT?!?"  Tsk, tsk, that IS a rather strong
PCTA position, isn't it?   :-)

Oh, my, redeaux...a former USMC member complaining of
SMUT is interpersonal communications!     :-)

for
>anyone with an IQ over 27.  This barely includes you.  There is only a code
```

>ARGUEMENT, which you seem to enjoy perpetuating.

Really? :-)   The FCC issued a new Report and Order on Part 97?

Last I looked, Element 1 was still required for morse code tests.

>   Lennie, what would some of your old cronies "on the job" think if they saw
>how you behave? Liar and bully. Some end to a career, huh...???

Heh. Fine, let them observe. No problem. :-)

Ah...back to the profanities again. Once again, Lennie forgets that profanity is the last resort of the childish mind. Of course it's not when HE does it......(yeah...right)

Hmmm...an ex-USMC E-7 who is "sensitive to profanity?!?!?"

Poor baby.

>That is verifiable by anyone wishing to contact KD6JG or W6MJN

Perhaps we should copy some of your "enlightening" posts and let your "friends" in on how you REALLY act in public. Or that you USE them to somehow validate your conduct as acceptable.

"Gee..some of my best friends are Hams...."

As a matter of fact, Al Walston, W6MJN, was Best Man at my
wedding.   :-)

>He made some vague claims of being involved in aviation
>electronics while in the USMC but nothing specific stated.

A matter of public record, and unlike you, I feel no need to recite page's long CV's in order to bully others.

Translation: Robeson can't describe it.

Terminated? Hmmm...the hospital I worked at last night will be surprised to hear that....As will several others.

So...do you still have the purchasing agent job or not?

And as for "burn out", well, all I can say is that until you deal with the death of a family member and then try to balance that with a profession wherein you must capably balance your own emotions in such a way as to not negatively impact your dying patient or thier family, you have NO frame of reference in which to make an informed opinion.

My mother died on February 18, 2001 at about 10 AM.

Thank you for your condolences..

>>to receiving a degree (most of my career)
>
>   Yes, Brian...nothing like nagging little details about legality. Lennie
>doesn't like legalities. They interfere with his rants.

Robeson's obsession is manifesting itself again. :-)

Robeson has taken things out of context. It is very, very legal to use the title of ENGINEER (even in lower-case) without having a state-issued professional engineering license. Check the law to see that is correct. Most engineers are not PEs, yet they do engineering work, are regarded as engineers, and are successful.

>>Yes, I was an electronics technician prior to 1964. The interesting
>>part is that industry doesn't need all the anal-retentive
>>"qualifications" and "licensing" you insist on in order to DO THE
>>WORK of engineering or in assuming responsibility of pass or

>>fail of a work task
>
> Oh, I SEE! So, by virtue of doing the WORK, you are justified in
>claiming the TITLE...! ! ! !

No, Robeson jumps mightily into the conclusion pit. My first engineering responsibility was in 1964 and that title was given me by Micro-Radionics, Inc. (later bought by Systron-Donner, which was much later bought by another corporation) of Van Nuys, CA. Robeson cannot understand that all "credentials" must be "issued" by "authorities" to be legal and valid.

> I can teach you (well, I MIGHT be able to teach you...) how to start an
>IV or use a defibrillator. Neither task, even though they may be done
>correctly, would make you a Nurse or Paramedic.

Irrelevant to radio, let alone amateur radio. To be correct, I've worked for Birtcher Corporation of Monterey Park, CA, the main plant making medical electronics. My title there, company-bestowed, was Cheif Engineer of the Instrument Division. Very legal.

> I see....Well, THAT being true, Lennie (YOU said it...it MUST be
>true...) you may refer to me as DOCTOR Robeson from now on.

Purchasing Agent Robeson (if he is still employed as such) can call himself whatever he wants. :-) He is strong, he is mighty, able to leap tall pileups in a single bound!

<more personal insult diatribe omitted>

> If you limited yourself to "policy" or "regulations", chances are
>there'd be no argument. However you insert your uninformed opinion
>into arenas of whcih you obviously have no experience.
>
> Again and again and again.............

Sigh...Robeson still doesn't understand the workings of a democratic representative republic or realize that amateur radio physics is exactly the same as radio physics of every other radio service.

Robeson is a "credential" freak, a control freak who has an obsession with trying to "get" another who won't stand for his bullying, intimidating attitude and constant personal pejoratives used in place of civil replies on subjects.

Good luck on your next job interview...

A veritable hamgod has spoken!   :-)

>
>> Witness your own intolerant remarks as a bona fide PCTA.
>
>I'm not intolerant toward those amateurs who have not passed a code
>exam. I work quite a few on 2m each week. That doesn't mean that I am
>in agreement with the whole code free license scheme.

Everyone who can understand the written English word can
understand you are not in agreement with a code-TEST-free
license. Why is that?

>Heil does voice his grievances as does Anderson. Anderson pontificates
>and condescends.

Heil wishes to join the well-poisoners? Of course he does.
Repeat the "pontification" and "condescending" words often
enough and a few might believe it. :-)

>Anderson does not confine his arguments to the subject but personalizes them based upon his opinion of those who disagree with him. Anderson speak with forked tongue.

Heil speaks, not with forked tongue, but with the attitude of the fraternal hall leader. Or is that beer hall?   :-)

If someone wishes to discuss, debate, or argue a subject on the merits of the subject, I'll be willing to do that. When some, Heil and Robeson at the moment, want to take every posting so personally, so emotionally that they get into personal insults, then it is time to return fire.

>When I entered amateur radio and each time I've undertaken an upgrade of my license class, I set about to meet the qualifications for that license.

Yes, you and Roll, mighty towers of perserverance and fortitude, willing to jump through any hoop put before you without quivering. Well, you've accomplished that and feel that is some kind of permit to push newcomers around. Why do you have such an attitude?

>At no time did I demand that those standards be lowered for my benefit nor did I put off obtaining a license until such time as the powers that be made the entry into amateur radio easier.

Ah...the old "obey the LAW" ploy! Nice wording. Good job.

Regulations on amateur radio were made by humans, not gods. Regulations are changeable by humans. In a democratic republic we citizens can strive to change laws, regulations, and rules made by humans in government. Heil seems to think that everyone must jump unquestioning through the same hoops he did. Why that attitude?

If anything were to be changed in US amateur radio regulations other than eliminating the morse code test, I would opt for TOUGHENING the written test elements. That was stated in my Comments on 98-143. [it is a public document now, just one of more than 2500 on file]

One interesting aspect of my suggestion to increase the number of written questions is that the already-licensed would get a free ride through grandfathering. All of the PCTAs would still bitch and moan because morse code is still the epitome of amateur skill to them. :-)

Heil may not be in a humorous mood to appreciate the irony in the above. Heil is rarely appreciative of anything not involved in the absolute obeyance of the existing law,

the mighty and noble perserverance to meet those laws
as they are. Why does Heil have such an attitude?

Most paramedics, firemen, and police officers are not ham radio operators
and cannot, or do not talk on, or listen to amateur radio repeaters.

If the sample came from Intel, Dick, you would lose. Dr. Williamson,
PhD EE, is a no-code tech. So were all my engineering managers.

Professionals (those that accept money for services rendered) in radio of the mid-1950s opted for radiotelephone in the majority. There was NO NEED for telegraphy in the majority of the whole radio world back then. Yes, there was some demand for commercial radiotelegraphists in the maritime radio service, LORAN, aviation radio on board trans-ocean air carriers. Was there a need for radiotelegraphists in Private Land Mobile Radio then? No. [the PLMRS as a group then incorporated the public safety radio services of today, in the USA under Part 90] Was there a need for radiotelegraphy in radio broadcasting then? No. Was there a need for radiotelegraphy in long-haul commercial HF communications? No.

Where is radiotelegraphy even used today? On some maritime installations, principally in non-US shipping. [the old 500 KHz international maritime distress and safety frequency has been replaced by GMDSS]. The more modern maritime installation has SSB voice, VHF voice, data and teleprinter, automatic distress and safety UHF/low-microwave that includes GPS position data. The US military still had some need for OOK CW skills up to about 1975; that was very secondary

compared to their major message communications
mode of data (teleprinter) and voice.

Will any professional (those who accept money, a
salary for services rendered) really need ANY radio
license to work on government contracts involving
the radiation of RF for any intended purpose? NO in
the vast majority of such contracts, from the 1950s
on to present day. Is any sort of radio license needed
by staff personnel today in fixed or land mobile radio,
broadcasting, radionavigation, paging, or cellular
telephony? You look it up...ALL the Parts of Title 47
are available for free download/viewing at the FCC
site, recent as of October 2000. Do you want to
count and compare the number of ALL radio licenses
in USA civil radio? Those are free downloads too.
Radiotelegraphy is a very, very small part of that,
almost miniscule, the majority of those existing only
in amateur radio.

I never "did it all" as a professional (accepting money
for services rendered). I DID have prior experience in
long-haul 24/7 HF communications courtesy of the
US Army but radiotelegraphy in such military radio
of the early 1950s was already almost non-existant.
That exposure to the Big Leagues of HF communication
(a mere 36 to 42 transmitters at little ADA, all of them
running RTTY, AFSK TTY on 12 KHz SSB, and SSB
voice) convinced me that the future of commercial
communications past the mid-1950s did NOT include
any radiotelegraphy. That prophecy-by-demonstration
proved correct.

Why would anyone back then have wanted a commercial
radiotelegraph license for non-shipboard radio? Did you
think lots of radio-work-interested folks lusted after
working on the old LORAN shore stations?!?   :-)

Grab those Urban Myths of old radio days and haul them
out to reinforce the "necessity" to test for morse code
skills in amateur radio to provide a "pool of trained CW
operators" for the defense or emergency in the USA. :-)
Ho, ho, ho, lotsa laffs there, Briny. Ancient. Worn-out.

Don't sweat some of these diehard CW fans, Rob. They have to "prove" (by any means possible regardless of ethics, morals, or logic) that OOK CW mode is superior, more useful, or divinely better than any other amateur mode in order to substantiate their rank, status, and position in USA amateur radio that came about through that skill. Ergo, whatever They have done in Their locality is better, stronger, more robust, more resistant than any of the public safety or public communications.

Back on January 17, 1994, the Northridge Earthquake knocked out ALL primary power to a large area of 10 million population of the Greater Los Angeles area at a bit after 4:30 AM. The public safety folks were already up and running on VHF voice, UHF voice, and leased landlines, beginning to aid citizens and repair damages. Likewise for the utility companies. This locality has organized and drilled for such emergencies and it worked fine. [others in here have bitched and moaned that Their local communities "cannot afford such things" but that is just ignorant rationales at making their message points to "prove they are right"]

The state of California (population about on par with Canada) has an Auxilliary Communications Service or ACS that integrates amateurs with professionals into a unified emergency communications structure. Larry Close has posted most of the ACS general overview in a separate message in this newsgroup. The California ACS has NO need for CW modes, doesn't plan on using such, no longer drills in CW mode among its amateur members. The ACS is realistic, it is part of the citizenry rather than being part of the past.

A number of PCTAs have decried the ACS with the usual geographic bigotry exhibited by eastern US and some midwestern US residents. The ACS still exists, works, and drills successfully for the citizenry, not for fulfilling some pipe dreams of past glories or exaggeration of past accomplishments demonstrated by the PCTAs in here. The ACS model is being picked up by some other states of the US.

From what I've seen of Canadian efforts at viable communications of amateur radio networks and in integration with government radio, Canadians can be as proud of their efforts in emergencies.

>as far as the operators being calm ... i havent seen a single person (myself
>included) not be shaky during cpr ...

My father suffered a single, fatal heart attack in the summer of 1975. In my back yard while I was at work. Reaching home quickly on hearing of this, I was able to meet and talk with the paramedics who had tried to revive him. One was shaky with exhertion of CPR and oxygen application and whatever else they did, the other despondent because my father couldn't be saved.

thats not the point ... one doesnt gain genious status becaus he can tap out morse ...

there are many out there who dont even know what smt is ...

so because they know code they are more valuable than even the most skilled no coder ?

There's a 40m net based around Miami which handles heaps of traffic
for the Red Cross during & after Central American and Carribean
natural disasters. They use both ssb and cw and the paths are a bunch
more than 120 miles long. There are some people around here who
apparently don't spend much time reading QST so that they'd know
what's actually up in this area.

Back in the mid 60's I ran into a ham on 20 cw using my call (different
one at that time).  I didn't have a beam antenna, so couldn't really get
a bearing on the location, but propagation was primarily to the midwest
at the time.  I called him, and signed with the same call.  He quietly
disappeared.  :_)

Its worth repeating Cary Magnum's comment. It was unfortunate
that the FCC did not mention it in their License Restructuring
Decision.

Larry KC8EPO

~~~~~~
In The Matter Of 1998 Biennial Regulatory Review � Amendment of Part 97 Of
the Commission�s Amateur Service Rules, FCC WT Docket 98-143

FCC Secretary Magalie Roman Salas
Office of the Secretary, Federal Communications Commission
1919 M Street N.W. Room 222
Washington, D.C. 20554

Public Service is the basis on which the amateur Service license has been authorized since its inception. This is the aspect on which the commission is urged to focus, and which we here address, as follows: (1) license privileges and classes, (2) testing requirement (code), (3) RACES Station licensing, (4) Amateur operation.

Background And Basis

Since 1985 California has had an aggressive program utilizing Amateur licenses. That year the state legislature mandated a paid staff coordinator with directions to enhance and expand that public service function involving amateur licensees. In April 1985 we began a series of education bulletins statewide at a time when there but three RACES units in the state. Today almost all of the 58 counties have an emergency communications unit based on the Amateur licensees; and our weekly EMCOMM Bulletins have would-wide distribution in addition to every state in the country.

In so far as we know, our program � the leader in the nation � is the only one with a paid staff position created by the state legislature to support the use of Amateur licensees in service to their communities.

In 1987 the American Radio Relay League requested that the statewide
~~~~~~

Bulletins be placed in the Amateur packet radio networks around the U.S. In time they became the standard in the US, replacing s defunct FEMA education program. Today these Bulletins are the source of education information for emergency communications units based on Amateur Radio. They are literally on hundreds of bulletin boards and Internet sites around the world.

Because we are involved daily with quintessential public service � their use in and for local government, we have a broader experience of Amateur license activities that than most petitioners. Our program is the recognized model in the U.S., Canada, Australia, New Zealand, England and other countries worldwide. The weekly EMCOMM Bulletins are on the worldwide Web at www.acs.oes.ca/ . Our Manual, titled the �establishing and maintaining an Emergency Communications unit for government�, is the only one of its kind in the country.

(2) Testing Requirement (4) Amateur Operations

In the 1990�s very significant changes have occurred affecting the usefulness of Amateur radio licensee to government. Today we face information systems that did not exist in the past. As we look to the year 2000 we need Amateur licensees capable of providing a variety of services in communications, typically computer based.

Thus, the use of code has declined to where it is no longer viable for government.

a. California eliminated the use of CW some years ago. Although we have a large and extensive communications center staffed for and with Amateur licensees, we had not used CW in decades. We retained a CW net until 1995, but it served no essential purpose, just once-a-week training for 3-5 participates. No county governments participated for years.

b. The US Coast Guard also eliminated the use of morse code several years ago, which is further evidence of its lack of applicability to today�s communications needs.

Today, our information systems are based computer based and operate by both wire and wireless. If the Amateur of today is not familiar with computers he/she is of little use. A background in computer experience and knowledge is far and away more important than that of CW.

When I became licensed in 1941 Amateur radio was the means of alternative communication. Today, the computer provides that, hence thousands of those who would otherwise be FCC Amateur service licensees never apply because the service does not attract them. Until we recognize that factor the service will not grow significantly, nor do we get the new blood of technically oriented people to spark the new innovations so badly needed.

To make matters worse, to a large degree an �old-boy network� exists in Amateur radio; one that grew up with �you must pass the code� concept. Like people everywhere �what�s good enough for me is good enough for you� is the mindset of many of today�s Amateurs. Without the ability to look to the future, or grasp the many changes occurring around them, they would keep practices long since useless. In government today we pass data digitally, not by CW or voice radio. In fact, there are government agencies who seek to do away with radio entirely.

One of my constant battles is to keep some radio capability functioning in government. There is a new breed of administrators who focus on the bottom dollar, not redundancy. Often they have no experience in communications failures, and their digital computer networks have not failed. They see no need for radio. So, they no longer fund or support radio programs. The federal Highway Authority (FHWA) is one instance of an agency that no longer supports High frequency radio. It�s a very real every-day battle. Our fiscal year has just begun and yesterday I was informed that there are no funds for communications equipment as it all went for computer systems.

So, I urge the reduction of code requirement to 5 wpm at general license level as it is not essential skill qualifier in today�s world. When it is possible to do so under international radio regulations, I further urge the Commission to drop the CW requirement entirely. It is not relevant to the year 2001 and subsequent real-world needs in communications.

(1) License Privileges and Classes

The proposed classes (no-code Tech, General, Advance, Extra) are appropriate. There is a shortage of people above the tech license interested in emergency Communications. It has been the Tech licensee�s that have made our programs possible. Without them the programs would flounder. There are exceptions, but in general it is the Technician licensees we rely on today. Due to the shortage to those qualified to operate HF we have to put a higher qualified licensee with them just to staff HF circuits.

I urge the Commission to adopt a requirement of computer ability, at least at the general level. Knowledge of technical digital information is not important. There may be those who will assert that test should include questions on Amtor, Pactor, Clover or such. The problem there, however, is that such modes are already out-of-date. To lock the testing into them is already a decade behind the times. What we need is young minds open to new possibilities, not old minds locked in decades old minsets. There are enough computer specialist around that its� easy to find them and they don�t need Amateur licensees to fix technical problems. In fact, it is their interest in the technical aspect of computers that have draws them away from Amateur radio.

I recommend that the licensee demonstrate the ability to use a computer; that is, demonstrate operating ability in word processing program, in a text-editor, how to use eMail and how to use communications programs. These are skills that need demonstrating in person, in lieu of the code test. It will be difficult to have multiple choice or yes/no questions to uncover these skills. Have the applicant demonstrate ability on his/her computer or one by owned by the examiner. It�s not too difficult to set such a standards as it is required of countless job applicants these days. An alternative is some of certification by a computer user group as to demonstrated skills.

(3) RACES Station Licensing

I urge that the provision for RACES station license be dropped. Few exist. Those that do should not be renewed. With today�s easy availability of callsigns, the purpose of calls for government EOC�s is simple. Here we formed a club to support the state activities and got licenses for each of the state�s regional EOC�s. It�s not quite the same, but it works.

The disadvantage of the RACES station license is a provision in the current regulation that has been misapplied. (see.......) This provision should be dropped. Specifically, that section states that a Races Station (defined in ....) cannot talk to another RACES station. Legally that means two RACES stations LICENSEE. However it has been interpreted to mean that any Amateur licensee operating in the RACES (mode or activity) cannot talk to any Amateur licensee operating in a non-RACES activity. For instance, during the 1970�s a FEMA employee critized one of our California amateurs for allowing a Amateur operating in a RACES activity to call and talk to an amateur for a club (non RACES) who had telephone capable of solving a need. The FEMA person did not understand that it only to a RACES station licensee.

Cary Mangum, Advanced Class Licensee W6WWW
State RACES Officer, California
State ACS Officer, California
Emergency Coordinator, Telecommunications

The California ACS dropped CW some time ago...and it has
already been through Real Emergencies...and it plans
ahead and more realistically by integrating amateur
communications with the rest of the governmental and
industrial-business networks.

California has a larger population, greater land area, more
and higher mountains, more and flatter land than Missouri
and Pennsylvania combined.

The 1994 Northridge Earthquake affected an area of about 40 by 80 miles. That's 320 square miles in area. No problem here since the emergency organizations planned for that, trained for that, were equipped for that and did the job well.

The California ACS is set up, drills, holds regular practice with all amateur modes except CW...and integrates amateur communications with other existing communications.

>In our case, cell phone lines were overloaded (useless), landlines were
>working, but were very busy. VHF didn't have the capability to reach out
>300 miles, and SSB was racked with QRN. CW was clearly the communication

During the 1994 Northridge Earthquake there was no damage

to the cellular telephone sites but, cellular being a part of the
telephone system, there was a period when too many tried to
call out through both cellular and landline telephone paths.
No problem to the local emergency/public safety folks since
they had planned for that, trained for that, were equipped for
that and did their job very well.

>Your side seems to think that local voice communication is the end all
>solution to every problem. I was merely showing that it was not, and that
>CW was still a good tool to have available.

"Your side" seems overly engrossed with CW because you
happen to prefer that mode. The California ACS has dropped
CW as any sort of emergency communications mode.

Ever hear of the Condor Net, Briny? One can talk on 223 from
north of San Francisco all the way south to the Mexican
border or cross state lines into Nevada or Arizona. Quite a bit
more than "5 miles." California radio amateurs made it
happen over twenty years ago.

Parts of California are definitely not flat (Mt. Shasta is over

14 thousand feet ASL and the surrounding mountain ranges
begin at 4 thousand feet and go up and down and up and...).
California has more unflat land than Pennsylvania. It has
more flat land (the gigantic San Joaquin Valley) than
Missouri...and some other flat states combined.

Well how many people have you save using CW?

Are you proficient in medical first aid, CPR, and AED use?

If thing are so bad that CW and only CW will get through,
you would probably do more good using your medical
first aid, CPR and AED skills.

I propose that that the FCC change 47CFR 97.503(a)
the require CPR certification.

"Usually"? What's the basis of such a conclusion? I'd be interested
in the research you've conducted in this area. How did you compile
the data to make such a statement, especially when most cases probably
go undetected and/or unreported?

Actually, if memory serves, NJ uses an extensive HF net that meets weekly between the various Northern counties and the State capital. I remember talking to a Hank something or other (old time ham) and he was waiting for the 40m net to begin with Trenton. I forget which county he was from but he mentioned that they always get tons o'snow. That was a CW contact (going back a year or 3)

Come work a mini-field day with the FISTS CW Club of Coastal Georgia some day and see how much of what you just said holds true. To the contrary, almost all of the pro-CW folks I know, not only have great skill at CW, but build their own antennas, and equipment. Can you say QRP? It sounds to me like you're grasping at straws now, Rob. Good luck holding on.

hehe...One more thing I'm doing to stir up trouble in our club is trying to
get everyone (well, some anyway) certified in first aid by the Red Cross. I

think a requirement for a ham license is a tad bit of a reach, but the idea itself is good.

It stands to reason that a person who can bootleg CW can probably
obtain a general class license. It is not so apparent for voice
mode bootleggers.

I didn't say that it has to be the former amateur who had the SAME call; just a former amateur who can't get relicensed and happened to pick your call.

> >Bootlegging usually is with the voice modes.
>
> "Usually"? What's the basis of such a conclusion? I'd be interested

On the basis that most of the bootlegging that goes on around here happens to be on 2m repeaters, and the mode certainly isn't CW. Anyone can bootleg using voice; no practice required. Not anyone can bootleg using manually generated morse code - such takes practice.

Anyone who has gone to the trouble of learning CW, etc., has no reason not to take the amateur radio examinations. That is my experience from being a volunteer examiner for 7 years and therefore meeting alot of people who have proven such.

[PS: As far as licensing is concerned, I am not in the "pro-code" group and do feel that the FCC's elimination of the higher speeds as a requirement was a correct action.]

Sorry - my mistake. Let me rephrase my question:

You previously wrote:

"but in reality ... on land there is not a need for >100km emergency traffic"

How do you figure that, Rob?

Will ALL future emergencies that occur on land only affect areas less than 120 miles in diameter? If not, then situations will arise where longer-haul communications will be needed.

73 de Jim, N2EY

The Mounds of Evidence are all the shortime hams who know so little about CW that even some who have passed a code test have no clue to its characteristices or how to actually use it on the air. Ignore and deny all you wish, facts are facts.

Lessee, there are a few dozen hams who work for Intel. There are ~650K hams in the USA. Case closed.

You must work in computers like Cecil did. You digi's get brainlock
when required to think about anything else.
Who said anything about value other than that a ham who is CW capable
is of value when it is to be used? He's worthless if not.

Sure they do...they gain "superior" capability and seek to
enforce that "superiority" by the continual urban myth claims
of "necessity" and "usefulness" of code as if that is a reason
to keep the code test element... :-)

>there are many out there who dont even know what smt is ...

Please don't ask too much of long-timers. I'm not sure they
know about technology, let alone surface mount technology.
:-)

>so because they know code they are more valuable than even the most skilled
>no coder ?

Absolutely according to all the PCTAs. They keep saying so.

>Advanced, Extra) have gained about 28,000.

Whether one uses "10 month" figures or the 11-month figures as of the end of March 2001, the above isn't quite true for HF. I used the end-of-March numbers compared to the end-of-April numbers to get the following:

The total number of Extra, Advanced, General, Technician-Plus, and Novice declined by 13,190 while the Technician (no HF privileges) increased by 19,010. The overall number of all licensees increased by 5,280 or a 0.86% gain over the end-of-April-2000 total licensees [approximately 0.94% annual gain].

Looking at the NEW licenses issued shows 210 new Extras, 1010 new Generals, but 18,391 new Technician class. Despite the restructuring with its lowering of the morse code maximum rate, 90.85% of all new licensees were Technician class.

The trite old argument that "Technicians will not renew" once they have reached the end of their first license period is not borne out by FCC database figures. Between end of April 2000 and end of March 2001, the total number of renewals within the ten-year period and during grace-period renewal was 26,200. Of those, Extra-through-Novice represented 63.5% of all renewals while Technician class renewals was 36.5%, a ratio very much like the that of all licensee class ratios.

According to FCC database figures collated at the AH0A site, there are still renewals of Advanced, Technician-Plus, and Novice classes.

Based on the AH0A tabulated data, there are FEWER licensees with HF privileges at the end of March 2001 as compared to the end of April 2000. Fewer, not more. No "seems" about it.

Aw, don't worry, Larry, you probably won't have to go into therapy over the CW test after all. You should know the FCC is almost sure to drop all CW testing, probably along with any meaningful testing of any sort, after the treaty is changed. Till then, well, you'l still have something to bitch about. You've got a few years to find something new to replace CW testing with.

Again, since it has made nary the slightest dent in your skull, the only reason for hams to know CW is so that they can use it when it is needed, and IT IS sometimes needed. I know, having faced those circumstances, and not in ham radio either.

Originally from the ACS network and in printed material
from that state office. After making the acquaintence of a
couple of local radio amateurs who worked for the city of
Los Angeles.

I and others have mentioned the California ACS website as
a convenient place to view their own words, particularly for
those who are out of state. The words do not differ from
their words printed on real paper using real ink.

Is the California ACS website "false and misleading"
because the ACS policy abandoned morse code mode?
Or is it "false and misleading" because it is a website?

>It couldn't have been as a volunteer - like some of the rest of us
>around here.

Oh my, aren't you something?   :-)

Why don't you volunteer to argue a subject on its merits
rather than on casting implications on personalities?

Good luck with that one now.

...And are you reclassifying any of those "Technicians" who are so because they
renewed their "Technician Plus" (or upgraded from Novice) and were issued a
"downgraded" license? If not, please redetermine these renewals or upgrades
and classify them as they should be, Technician w/ HF. Also, how can you be
certain of any of the Technician licenses now, being that since April 15, 2000
(except those previously licensed as novice), the only proof will be a morse
code CSCE in hand which does not even show in licensing records...?

Much more important would be the question how many people could you possibly save if their only communications happened to be to call in on

CW on your voice net?

>
The down 'n dirty question is do hams ever participate in emergency
comms between stations which are separated by sixty-some miles? The
answer is a thundering YES!
>
Conjurs up the story abt when Richard Nixon went to Venezuela on a
horribly misguided "good will tour" and his whole high-profile
entourage found thenselves barricaded in some hotel in Caracas against
screaming mobs of Venezuelan nationaists bent on tossing the Yank oil
companies out of the Lake Maraciobo oil field.
>
Washinton went apeshit because the phones in Caracas went unusable
during the riots and DC had no idea if Slippery Dick was still alive
or dead. No problemo. USAF Cheif of Staff General Curt LeMay who was a
ham and part of the Nixon entourage dropped some wire out the hotel
window and put his suitcase portable Collins KWM-2A on the air and hit
the tribander on the roof of the White House and called off the
Marines.
>
It's history carved in stone.
>
Hey Jim, how far izzit from Caracas to 1600 Pennsylvania Ave.? Gotta
be more than 60 miles . . .
>
Anybody dull-witted enough to think that technology has anything to do
with keepinhg bad history from repeating itself has an education
enroute.

They are exactly like you were in, when was it, 1960? You keep
exhibiting this need for newcomers to be as experienced as you,
Dick. You know it doesn't happen that way. There's just no way
a 20 year old can be as experienced a ham as you are. I know it
makes you feel superior, but newcomers deserve a break.

The trouble is that the way Powell and Company are talking this could be
a TRUE story in a few years. How much would the Amalgamated
Consolidated-United Mega-Corp. pay at auction for an exclusive
assignment at 40m? or 10m, or maybe for ALL of HF?

You may think this is a troll now, BUT?!?!?!?!

There are more than 30 dozen hams at Intel, Dick. Multiply that by all
the technical companies like IBM and Motorola and you have a plethora
of engineers including a lot of PhDs who are nocode techs. Your wishing
it wasn't so doesn't change a thing.

Being unable to get a license is only one of a number of reasons for someone
to bootleg a call. It is quite possible the bootlegger in person actually
has a call but for some reason would rather use Jeffrey's. (to suggest one
possible reason: because he wants to know what it's like to be DX without
actually travelling to a DX location)

The Titanic had plenty of flares. The problem, as I understand it, is that they were not the right color (white instead of red). And, back then, they were huge bottle rocket type affairs, not the small flares that could be carried on a lifeboat today. In addition, the flares burned for only five to six seconds, as opposed to the 60+ seconds of today's parachute flares.

Haven't heard this, but it wouldn't surprise me. It looks like a halfway
decent residential neighborhood surrounding it on most sides, and I'm sure
the golf course improved residential values too. The Hara does seem more
than a bit out of place at that location.

He has absolutely atrocious fist, and has to pause periodically to look
up rarely-used letters from the Morse Code list on the front of his
walkie-talkie.

I dunno about the bootlegger, though.

It must. You can hear the anti-gun nuts saying, "Die, die, die"
as they grind up the guns.

My wishes have nothing to do with it. Reality is what matters. There are just not that many techies even mildly interested enough in ham radio to get even a nocode ticket. Your wishes are at variance with the facts as usual, of course.

There were bugus dx cw & phone callsigns being used going back before I got into dxing in the '50s. It was almost a sport, provided chances to get into pileups when things were slow. The "Island of Ambrosio" popped up regularly on 20m ssb. Then we had the Don Miller fiasco. Based on what I'm hearing on the bands these days there isn't anywhere near as much of that nonsense today as there was back when.

The discussion is the telegraph license in it's applicable timeframe,
it's not about not who did what elsewhere when. Divert maneuver = OFF.
U.S. commercial ships (over some size) could not put to sea without
having a Radio Officer who held a First Telegraph.aboard. And the only
way a Second Telegraph could upgrade was by spending a one year
apprenticeship under a First Class either at sea or at a coastal
station. A cw-proficient kid could make a helluva lot more money by
shipping out as a shipboard sparky than could a phone-licensed kid who
just twisted knobs at some BC station.

>kind in the last ten years?

No. There are presently three new power plants being constructed in California.

>Sounds like they have a real handle on the long
>term planning game, huh?

The "California power crisis" was due to the controversial power deregulation brought about in 1996 by the state congress. That did not unduly affect any of the municipal power generating facilities. At issue in primary electrical power is the purchase price of power from other sources by PRIVATE (i.e., independent business) power suppliers. The deregulation of private electrical power has already begun in other states of the USA. The news media highlights California's problems in electrical power because it is the most populated state in the union, 33 million.

The California Auxilliary Communications Service has, presumably like independent RACES, independent electrical primary power emergency supplies. As an integrated state-wide communications service it is tied in with other infrastructure communications facilities. I do not know precisely if the ACS has such emergency power but the existing infrastructure certainly does...demonstrated by the total electrical power loss to 10 million as a result of the 1994 Northridge Earthquake. None of the government or untility company communications infrastructure was unduly affected by that sudden electrical power cutoff.

>...And are you reclassifying any of those "Technicians" who are so because they renewed their "Technician Plus" (or upgraded from Novice) and were issued a "downgraded" license?

I'm not "reclassifying" anyone, just looking at numbers tabulated by a long-time radio amateur who is also the author of Morse Academy and Ham Academy training programs.

>If not, please redetermine these renewals or upgrades and classify them as they should be, Technician w/ HF.

I'm just looking at license class totals. Since neither you nor I regulate US amateur radio, I can't see how the judgemental "as they should be" label applies.

>Also, how can you be certain of any of the Technician licenses now, being that since April 15, 2000 (except those previously licensed as novice), the only proof will be a morse code CSCE in hand which does not even show in licensing records...?

If the information isn't in the public record for everyone to see, it isn't possible to be "certain" about any CSCEs. Please do not ask the impossible.

FCC public records for all licenses, all radio services, are found under the ULS page on their website. US radio amateur license information is available in two forms: Applications (approx. 20 MB in size) and Licenses (approx. 52 MB in size). Both are .ZIP files. The License file will take about 2 hours, 20 minutes to download at 49 1/3 KBPS (my average data rate with a 56K V90 modem and ISP). All of the data field information is explained on separate, much smaller files (see clicks at bottom left of ULS page file listing). Feel free to download anything you have access to, un-zip it, sort the information, total whatever you can organized by whichever way you want, and tabulate it in a form that everyone can look at...and be judgemental about. :-)

Joe Speroni, AH0A, does all that downloading, sorting, and tabulating, makes it available free of charge on his website. Even though Joe is an obvious morse code booster, his efforts in doing the data presentation each month deserves a long round of applause from everyone through that volunteer service, available to PCTA and NCTA alike..

I did not take any issue with CSCEs or with any data that was not publicly available to all. I merely put up a counter argument against Hans Brakob's assertion that "there seemed to be more HF-privileged hams available" under post-restructuring period, based on publicly-available data available to both of us.

As far as the post-restructuging period is concerned, I do not see much of a difference in licensing AS A RESULT of restructuring other than a lot of "lower" class licensees "upgrading." The total number of licensees shows a very slight gradual gain (just under an equivalent annual increase of 1 percent). As far as NEW licensees are concerned, it would seem that newcomers are going for the no-code-test Technician license far more than any General or Extra class license:

>> Looking at the NEW licenses issued shows 210 new Extras,
>> 1010 new Generals, but 18,391 new Technician class. Despite
>> the restructuring with its lowering of the morse code maximum
>> rate, 90.85% of all new licensees were Technician class.

Not only that, but RENEWALS' numbers don't show the PCTA previous claim that no-code-test Technicians "will not renew:"

>> borne out by FCC database figures. Between end of April 2000
>> and end of March 2001, the total number of renewals within the
>> ten-year period and during grace-period renewal was 26,200.
>> Of those, Extra-through-Novice represented 63.5% of all
>> renewals while Technician class renewals was 36.5%, a ratio
>> very much like the that of all licensee class ratios.

It does not seem to be true that no-code-test Technicians are "dropping out" en masse as predicted by the PCTAs.

Unfortunately for the PCTAs, the total number of all classes which do or did require a code-test for that class are still declining. In the 11-month period following April 15, 2000, the total number of code-tested license classes decreased by 13,190. Had it not been for the 19,010 license class increase of Technicians the overall number of amateur licenses would have declined.

It can be argued that the Technician class totals increased "because" of the transfer of Technician-Plus renewals to Technician. Unfortunately, that argument is degraded by the number of NEW Technician license grants which are NOT renewals: 18,391. Those "transfers of renewals" account for only 619 Technician class license increases (19,020 minus 18,391). That 619 "renewal transfer" number is 3.3% of the Technician class increase.

The trend in US amateur radio license classes should now be clear. The Technician class licensee is still the largest class (now 32.9% at end of March 2001) and continuing to grow (was 30.3% at end of April 2000) and (surprise) is being renewed. The total number of code-tested license classes is still dropping; the 619 "renewal transfers"

of Tech-Plus to Tech in the 11-month period represents
only 4.7% of the total code-tested-class decline of 13,190.

I'm sure (no, make that certain) that you think telegraphy is the
primest of the prime qualities in radio...in the 1950s or in the 2000s.

You asked a (somewhat snarly) question asking me if I'd already
had a commercial radiotelegraph license in 1956. I said I didn't
and presented some opinions against it, again in the 1956 timeframe.

>U.S. commercial ships (over some size) could not put to sea without

I was 23 1/2 when I got my commercial First Phone in 1956, senior.
Why should everyone have to lust for a life at sea?   :-)

Chances are a "phone-licensed kid" who rode gain at a broadcast
station could make more than you think they could in 1956.   :-)

>>Was there a need for radiotelegraphy in long-
>>haul commercial HF communications? No.

No, because all your concentration is on ships and shipping for
radio use, emphasizing CW. I'm thinking communications of
every mode and I remember RTTY and commercial sideband as
predominating other modes and modulations on HF in 1956,
exclusive of ham bands.

In my personal experience in the US Army Signal Corps of 1953
to 1956, the Army's trans-Pacific HF network connecting Seattle,
Anchorage, San Francisco, Honolulu, Manila, Okinawa, Saigon,
Pusan, Seoul, and Tokyo did much more than send bills of lading.
ADA in Tokyo was a larger medium-size station with 42 transmitters
ranging from 1 KW to 40 KW. ADA's monthly message average in
1955 was 220,000, all of them on teleprinter. No OOK CW used
anywhere on that net. WAR (Washington Army Radio, gotta love
that callsign!) had a 1955 monthly message average of 1.2 million,
all on teleprinter. The Army had other networks in other theaters
of operation on HF as did the USAF and USN (for fixed-base to
fixed-base, land to sea still used CW).

Since you mentioned RCA, the pre-WW2 and just post-WW2
RCA Globecom service was primarily teleprinter (I can't recall
any Globecom veteran ever mentioning CW). Some of the pre-
WW2 commercial networks and companies are shown in the
beginning of the "Collins SSB Book" by Pappenfus, Bruene,
and Shoenicke. SSB really began on landline around 1918
as "carrier" frequency-multiplex equipment...which was then
used almost intact on radio SSB for 12 KHz wide, four-voice-
channel-bandwidth circuits by commercial communicators.

>>Where is radiotelegraphy even used today? On some

Wonderful, you have ONE example. Did you get a call sign to
prove it was not a ship or coastal station? If it was sending
gibberish, how do you know what it was? [sounds like a
"numbers station" sending encrypted messages]

Try tuning the entire HF band (or even just below the MUF) and
total the types and kinds of modulations outside of amateur bands.
A broadband antenna will help. Sounds of various HF modulations
are available as WAV files on a couple of websites, the ARRL's
included.

\>>Why would anyone back then have wanted a commercial
\>>radiotelegraph license for non-shipboard radio?
>>
\>Where did I even intimate otherwise?? Divert=OFF again.

Then why did you ask if "as a 'with-it' communications professional,
did I already have a radiotelegraph license" in 1956?   :-)

[your divert switch is broken...]

What facts? A lot of the "facts" you utter are wet dreams.

Most of the nocode hams at Intel are techies. I have no reason to
believe that Intel is unique among technical companies.

Then, any conclusion based on the statistics you've used will be incorrect because they don't account for these issues. The only question then will be: Is the error caused by these issues material? I say that it is, because by 10 years time (and we've had 1 year - therefore 10% of that time period), there will be NO Technician Plus entries in the FCC database, yet all those who did not upgrade will still have HF priveleges. To measure those with HF vs. those without cannot be accurate.

The best that you can hope for in correcting this is to go through a copy of the FCC database (or a copy) as it existed on April 18, 2000 (since the first restructuring upgrades showed up on April 19, 2000) and identify all those technicians with HF and novices that are now listed as merely technician and adjust (move them from "no HF" to "HF"). This information is available - why aren't you using it?

There will always be the CSCE problem introducing an error, but at least, you'll eliminate the other error.

>
> If the information isn't in the public record for everyone to see, it isn't possible to be "certain" about any CSCEs. Please do not ask the impossible.
>
> FCC public records for all licenses, all radio services, are found under the ULS page on their website. US radio amateur license information is available in two forms: Applications (approx. 20 MB in size) and Licenses (approx. 52 MB in size). Both are .ZIP files. The License file will take about 2 hours, 20 minutes to download at 49 1/3 KBPS (my average data rate with a 56K V90 modem and ISP). All of the data field information is explained on separate, much smaller files (see clicks at bottom left of ULS page file listing). Feel free to download anything you have access to, un-zip it, sort the information, total whatever you can organized by whichever way you want, and tabulate it in a form that everyone can look at...and be judgemental about. :-)
>
> Joe Speroni, AH0A, does all that downloading, sorting, and tabulating, makes it available free of charge on his website. Even though Joe is an obvious morse code booster, his efforts in doing the data presentation each month deserves a long round of applause from everyone through that volunteer service, available to PCTA and NCTA alike..

And he's not the only one. However, like many of the more well known sources (Buckmaster, QRZ, etc.) who also stamp CD's, I bet that his program suffers from the same fault - failure to retain HISTORICAL records. Most callbook programs that I have seen will retrieve ONLY the current record (with perhaps a link from an old call to the new one). I have my own copy of the database, and I don't do a "replace" when a record is updated; I have it do an "add."

Also, why downloading the DAILY UPDATE files (alot smaller) hasn't occurred to you is beyond me?

[See below for an example:]

> I did not take any issue with CSCEs or with any data that was not publicly available to all. I merely put up a counter argument against Hans Brakob's assertion that "there seemed to be more HF-privileged hams available" under post-restructuring period, based on publicly-available data available to both of us.
>
> As far as the post-restructuging period is concerned, I do not see much of a difference in licensing AS A RESULT of restructuring other than a lot of "lower" class licensees "upgrading." The total number of licensees shows a very slight gradual gain (just under an equivalent annual increase of 1 percent). As far as NEW licensees are concerned, it would seem that newcomers are going for the no-code-test Technician license far more than any General or Extra class license:
>

> >> Looking at the NEW licenses issued shows 210 new Extras, 1010 new Generals, but 18,391 new Technician class. Despite the restructuring with its lowering of the morse code maximum rate, 90.85% of all new licensees were Technician class.
>
> Not only that, but RENEWALS' numbers don't show the PCTA previous claim that no-code-test Technicians "will not renew:"
>
> >> borne out by FCC database figures. Between end of April 2000 and end of March 2001, the total number of renewals within the ten-year period and during grace-period renewal was 26,200. Of those, Extra-through-Novice represented 63.5% of all renewals while Technician class renewals was 36.5%, a ratio very much like the that of all licensee class ratios.
>
> It does not seem to be true that no-code-test Technicians are "dropping out" en masse as predicted by the PCTAs.
>
> Unfortunately for the PCTAs, the total number of all classes which do or did require a code-test for that class are still declining. In the 11-month period following April 15, 2000, the total number of code-tested license classes decreased by 13,190. Had it not been for the 19,010 license class increase of Technicians the overall number of amateur licenses would have declined.
>
> It can be argued that the Technician class totals increased "because" of the transfer of Technician-Plus renewals to Technician. Unfortunately, that argument is degraded by the number of NEW Technician license grants which are NOT renewals: 18,391. Those "transfers of renewals" account for only 619 Technician class license increases (19,020 minus 18,391). That 619 "renewal transfer" number is 3.3% of the Technician class increase.
>
> The trend in US amateur radio license classes should now be clear. The Technician class licensee is still the largest class (now 32.9% at end of March 2001) and continuing to grow (was 30.3% at end of April 2000) and (surprise) is being renewed. The total number of code-tested license classes is still dropping; the 619 "renewal transfers" of Tech-Plus to Tech in the 11-month period represents only 4.7% of the total code-tested-class decline of 13,190.

Example of Historical lookup:

Call to search: AH0A   (since that was the only call appearing in the msg)

Now, if he were currently a "technician" but previously a "tech plus", a HISTORICAL database would show that. In this case, all I have is two prior entries of the same class.

again with the area sheesh ... since when does area matter in radio communications ... distance my good lad ... is all that matters ... fact is ... 100km's gives you 10000km^2 area ... plenty more than 300 ...

and 40 miles is a short trip between base stations on hf ssb

```

but what is the problem with having more than one relay ... for the most part ... when we set up i&r stations up here ... each has a comm center ... and they typically are no more than 20kms apart ...

>amateur radio that came about through that skill....(SNIP)

     Lennie's usual "proletariate vs burgeuois" (pardon the spelling) spin.

     Still not true nor accurate, but it makes Lennie feel like he desreves to
```

be on the pedestal he has created for himself.

>This locality has organized and
>drilled for such emergencies and it worked fine. [others
>in here have bitched and moaned that Their local
>communities "cannot afford such things" but that is just
>ignorant rationales at making their message points to
>"prove they are right"]

California, if it were a seperate republic, would have the 6th largest GNP in the world. THEY can afford it.

That YOU, Lennie the Impotent, consider it "ignorant" that we know our own circumstances better than YOU, is arrogant.

>The state of California (population about on par with
>Canada) has an Auxilliary Communications Service
>or ACS that integrates amateurs with professionals
>into a unified emergency communications structure.

Now you admit that Hams ARE a part of ACS. You have previously asserted that ACS did not use Amateur Radio nor Amatuer Radio Operators.

>A number of PCTAs have decried the ACS with the
>usual geographic bigotry exhibited by eastern US
>and some midwestern US residents.

Yes, Lennie...I guess YOU would consider it "bigotry". Again, the above delineates the difference between emergency services available in regions with a high per-capita income as opposed to other areas that don't enjoy that deep-pockets tax base.

THAT'S bigotry.

>The ACS still
>exists, works, and drills successfully for the citizenry,
>not for fulfilling some pipe dreams of past glories or
>exaggeration of past accomplishments demonstrated
>by the PCTAs in here.

You really are a very sick, mentally depraved person, Lennie. You really do believe this crap, don't you?

Putz.

>The ACS model is being
>picked up by some other states of the US.

I have a model of a C-5B, Lennie. Doesn't mean I can own one.

>My father suffered a single, fatal heart attack in the
>summer of 1975. In my back yard while I was at

>did, the other despondent because my father couldn't
>be saved.

My condolences on your father's untimely demise. Hopefully the proliferation of AED's and other devices will help to take the edge off of sudden cardiac death.

if im driving down the street ... and happend accross an accident i more than likely would be far more qualified to perform first aid on the person than any witnesses ... and thus i would have them call out on the radio while i attended victims ...

that aside ... if i were alone ... i could send a voice mayday etc far
faster than you could on cw ...

and at very last ... try sending cw while performing cpr! its much easier to
use a handmic on a ht !

again getting back to the comm centers here ... our emergency and disaster
services members all have rroc and some have amater ... we use commercial
freqs to comm between shelters and r&i's its simply faster to send voice
between em anyways ...

Hans, did you give up on Amatuer Radio awards and are now trying to accumulate the most ISP's...?!?!?

What formula would it be that you are using?  Does your antenna have a
square radiation pattern?  If you are trying to argue a point in a room full
of people that heartily disagree, you have to watch things like that.  You
stated this as "fact".  Fact is, the area of a circle is pi(r^2).  Things
like that can really blow your credibility.

>I'm just looking at license class totals. Since neither you nor I
>regulate US amateur radio, I can't see how the judgemental
>"as they should be" label applies.

Ah yes...Let's "ignore" the fact that the FCC does not presently define any difference between "Tech" And "Tech Plus" since the difference in the numbers will significantly alter Lennie's rants.

Again.

>If the information isn't in the public record for everyone to see,
>it isn't possible to be "certain" about any CSCEs. Please do not
>ask the impossible.

Yes, don't "ask the impossible". Heaven forbid Lennie was proven wrong. Lord know's THAT has never happened. (yeah...RIGHT!)

>I did not take any issue with CSCEs or with any data that was not
>publicly available to all. I merely put up a counter argument

>against Hans Brakob's assertion that "there seemed to be more
>HF-privileged hams available" under post-restructuring period,
>based on publicly-available data available to both of us

His "seem(ed)" based, of course, upon the experience of a person who both HAS an Amatuer License, and is ACTIVE with that license.

Furthermore, even if he was "wrong", it was still an opinion, not an offering of fact. Ergo your dissertation was done not as a "counter argument" to Hans, but as the potentiator of an argument.

Not that we expect anything less.

>As far as the post-restructuging period is concerned, I do not see
>much of a difference in licensing AS A RESULT of restructuring
>other than a lot of "lower" class licensees "upgrading.

Ah yes...Lennie sitting behind his computer screen once again pontificating on the impact of regulatory changes based upon numbers he reads on that screen...NOT practical experience...NOT participation in club activities...NOT as a licensee.

Again.

>It does not seem to be true that no-code-test Technicians are
>"dropping out" en masse as predicted by the PCTAs.

Definitive numbers? Or more emotional pontificating?

>Unfortunately for the PCTAs, the total number of all classes
>which do or did require a code-test for that class are still declining.

Nothing unfortunate about it for me....The more Hams the merrier. Regardless of WHICH band I work 'em on. Of course THIS is an experience you can't know, Lennie.

>It can be argued that the Technician class totals increased
>"because" of the transfer of Technician-Plus renewals to
>Technician. Unfortunately, that argument is degraded by the
>number of NEW Technician license grants which are NOT
>renewals: 18,391.

And is further diluted by the number of those NEW "Technicians" that are obtaining a CSCE for 5 wpm at local VE sessions and are subsequently taking advantage of the FCC's ruling that if they have that CSCE in thier possession, thye make take advantage of "Tech Plus" priviledges.

I have signed several (12-15) CSCE's granted for the 5WPM test only by persons holding a Tech.

>The trend in US amateur radio license classes should now
>be clear.

Yes, Lennie, it's clear....that no matter what the numbers show, you're
out there and the rest of us are "in here".........

Jeff:

My last shipment from the QSL Buro included 4 QSL cards from stations I had not worked. This has occurred to me several other times throughout my ham career, involving my last three callsigns (N3CRA, WR2F, K3LT). I'm sure I'm hardly the only one being bootlegged; I'd be curious to know how extensive this phenomenon really is. I'd also like to know what can be done about it, although I suspect that not much, if anything, could be.

square area ... why not ? ... area of a circle ... pi * r^2 ... ...
100kmx100km grid ... what section of area a station (comm center) may be
responsible for ... of course in real life you would have a 10 x 10 ... but
thats beside the point ...

fact is ... an ssb can have reliable comms up to 100kms easy ... assuming
the operator isn't deaf

Any person that calls for CPR help on a CW net is not properly
prepared for such emergency. The help provider must start CPR
immediately and call 911.

All of which raises a very interesting question. How do you for
help on the Internet? This discussion group should know,
because after WRC 2003, it will be important.

>many that frequent these newsgroups.

jj:

Speaking as someone who isn't an old, cynical, name-calling, holier-than-thou, or vulgar-as-hell "example" of hamdom, I totally agree with you.
Note I omitted the bit about being a "fart," because I do occasionally
indulge in that activity -- usually after a visit to Taco Hell.

>Let's hope they never learn they are
>not "real hams"

Who is saying they *aren't* "real hams, jj? So far, you're the only
one who's made an issue of it.

because they would probably joins the ranks of former and
>inactive hams, of which we have far too many already

I disagree. I don't think we have nearly enough former and/or inactive
hams. Those out there who are bootlegging my call sign on-the-air,
as recently as January, would do me and the ARS a great service if
they would become "former and inactive" hams.

>(and in my opinion,
>there are a whole bunch of you who should be in the category but aren't -
>you and the rest of us would both be much happier I think if you were to
>stop your tirades and tantrums and take up woodworking or needlepoint to
>fill your idle hours).

Just what *is* your problem here, jj? Personally, I'm more than willing
to live and let live whenever new hams show up on the local repeater,
as long as they aren't doing anything illegal, against club policy, or
deliberately annoying. It sounds to me like you're hollering long
before the hammer drops on your foot.

Hint: Don't judge us rrap'ers as hams by how we appear to behave on Usenet. This is NOT ham radio; never was, never will be, and we are intelligent enough to understand the difference. So stop whining about how you *think* we would behave on-the-air if you don't have any direct experience.

Dick:

Keep in mind, I don't remember anything of the sort. I may have exchanged one or two e-mails with a friend of Cecil's, in which I may have simply stated my position on whatever matter was being discussed at the time. I never "harassed" anyone "without end," because, in addition to the fact that I would still be doing it right now (which I'm obviously not), I have never had any inclination to do any such thing to anyone. Like everything Cecil says, it must be taken with at least 7,000 grains of salt.

Here are some numbers from the AH0A website to consider.

From March 31, 2000 to March 31, 2001:

- The total number of US ham licenses rose from 677,784 to 684,359 - a gain of 6,575 (1%)

- The total number of Extras rose from 75,985 to 95,243 - a gain of 19,258 (25.3%)

- The total number of Advanceds dropped from 103,048 to 88,082 - a loss of 14,966 (14.5%)

- The total number of Generals rose from 109,787 to 136,056 - a gain of 26,269 (23.9%)

- The total number of Technician Pluses dropped from 133,688 to 96,145 - a loss of 37,543 (28%) (See discussion)

- The total number of Techncians rose from 204,646 to 224,867 - a gain of 20,221 (9.9%) (See discussion)

- The total number of Novices dropped from 50,630 to 43,966 - a loss of 6,664 (13.1%)

The above totals are for individual licenses. Note that from a percentage viewpoint, the fastest growing class is the Extra, while from a number of licenses viewpoint, the fastest growing class is the General.

Since April 15, 2000, the FCC has renewed all Technician and Technician Plus licenses as Technician. Also, a ham who holds a Technician license and has passed Element 1 (5 wpm code) has Novice/Tech Plus HF privileges, even though the database simply shows "Technician" as the license class. There is no easy way to determine exactly how many Techs are actually Techs with HF, because the FCC does not keep that information in its database. A lower bound on this number can be found by adding up the number of Technician renewals from April of 2000 until October of 2000 (3273) This works out to an average of 467 per month, or 5,604 per year, being reclassified from Tech Plus to Tech because of renewal.

There is also no easy way to determine the number of upgrades for most of the classes, because upgrades are recorded as "modifications", just like address or name changes.

The total number of "lots of HF" licenses (General/Advanced/Extra) rose from 288,820 to 319,381 - a gain of 30,561 (10.5%). This is what K0HB is referring to in his post - more hams with lots of HF privileges.

The above figures reflect only one year's change, starting on the eve of restructuring. It will be interesting to see how the trends evolve over longer time frames.

It wasn't the quantity that was the problem. It was the fact that those on board the Californian didn't know what the rockets meant.

> Aren't all
>present day lifeboats equipped with flares?

I suppose so - but not so in 1912. You see, the professionals had determined that the probability of a ship the size of Titanic sinking before help would arrive was so low as to be of no concern. That's why there were not enough lifeboats for all on board, no flares, rockets or even flashights in the lifeboats, no lifeboat drills, no binoculars for the lookouts, etc., etc.

Often more is learned from failure than success.

I nearly fell out of my chair tonight watching "Titanic" on The Discovery Channel. The reenactment of the CW operator showed him tapping out CW using only his index finger. If Dick saw that, I'm sure someone had to carry him to the emergency room.

If cell sites can have hexagonal coverage, why can't he have square coverage? :-)

i have operated a class c on my own ... solar powered ...

and last year was with vo1aa in nfld ...

actually ... antenna design (simple anyways) is part of the licencing here
... as well as station setup ... simple block diagrams etc ...

It was so common they even had a name for bootleggers, like 'Elmer', only for the bootleggers it was 'Slim'.

 You can bet the farm that the real Titanic operator didn't handle his
key that way. So much for depictions.

>receive CW?

On the receive side, it would become obvious pretty quickly. Machines have a hard time copying CW, and find it nearly impossible in QRM. It might not be obvious that the guy's a bootlegger, but it would be obvious that he wasn't copying code by ear.

(awhile back, a Chilean military officer/ham was stationed on a Chilean island that counts as a rare country separate from Chile. The operator knew little or no Morse - he did all of his operating on RTTY. Apparently after being asked for CW QSOs enough times, he decided to fire up his multimode TNC on CW. The effort was very much appreciated, but it was very obvious something different was going on...)

Tech Pluses started to be renewed as Tech 15 April 00 and about 5k of them were in the Tech figures by December before renewal of the Codeless began. FYI 11,875 Pluses expire in 2001 and 16872 Techs.

>
> It is known that less half of eligible amateurs renewed their

And where does that bit of wonderment come from? Even expiring Novices are renewing at about 30%. At first quarter rates, we will renew about 33k of the 54k that come up this year. Give or take two-thirds is a far cry from 'less than half'.

Think about it! Given an Amateur career in the 40 year range, something like 20-25% will fail to renew on any given 10-year cycle because they are dead. In fact, given the aging of the population in general, death would appear to be nearly the sole cause of non-renewal these days.

The ARRL has made a mockery of its constitution and by-laws, and they've trashed the good principles on which Hiram Percy Maxim founded the organization. Enough is Enough, it's time to sue.

Anyone know if we can sue them? Can you sue an organization that has not followed its by-laws and constitution in recent years? How much is the League worth right now?

Thanks for any info or advice. I'm not an attorney.

Well, since you're such a dullard that you can't figure out how not to cross
post this crap and are too much of a coward to use your real name, I don't
hold much hope for your case.

Exactly what "good principles" has the League trashed? Please fill us in...

Johny B. Good wrote in message ...

How can you mistake reality for delusions, Dick? Exactly what is it that I have said that you think is delusional?

Thus shutting the barn door after the horse was gone. Are you advocating
that all ships go back to CW for emergency communications, Dick? If not,
exactly what are you advocating for ships?

And of course, you know better than all the experts combined. Exactly
what are you advocating for ships, Dick? Do you advocate a CW operator
standing by 24/7?

No, the code test will be dropped because it serves no regulator purpose, is unecessary, not in the public interest, and not in conformity with 5 USC 706(a)(A).

You the one that thinks it has something to due with numbers, not me.

Because get the numbers from the W5YI Report. I will go to site you provided
and update my table. I am not exactly sure they are counting the same
way (licenses in the 2 year grace period).

<sniped>

The database I have shows that the Tech Plus license was not issued until 1991.
It unimportant becaue in terms of meanful access to HF there is little difference
between Tech Plus, Novice, and Tech licensees.

What, precisely, is the problem? How has the BOD violated the bylaws?
>
>Anyone know if we can sue them? Can you sue an organization that has not
>followed its by-laws and constitution in recent years? How much is the League
>worth right now?

First you need to show that the constituion and bylaws were actually violated. Then you have to show that such violation resulted in some sort of harm to someone.

Details, please.

In article <3acd1800$0$12831$bbae4d71@news.net-link.net>, "Larry Klose" <lklose@net-link.net> writes:

>The effect of Tech Plus class being renewed as Tech will not
>be seen until 2001.

That's not correct, Larry. The FCC began to renew Tech Pluses as Techs on April 15, 2000. More than 3500 Tech Pluses were renewed as Techs from April 2000 to November 2000. (November 14, 2000 was when the very first post-Feb 14-1991 Techs came up for renewal).

>You will see the VHF/UHF class gain
>jump up to 20,000 by April 2001. It is estimated the Tech Plus
>renewal account for about 5,000 of the gain.

Agreed. Probably more like a gain of 6000, though. And anyone who passes Element 1 but does not upgrade to General gets Novice HF privileges but still shows up in the database as a Tech.
>
>It is know that less half of eligible amateurs renewed their
>license at the end of the ten year term.

How do you figure that? Compare the following figures from the AH0A site:

Total renewed licenses (not including grace renewals) from Mar 31, 2000 to Mar 31, 2001: 23,407

Total expired licenses from Mar 31, 2000 to Mar 31, 2001: 18,537

So out of a total of 41,944 licenses eligible for renewal during that time period, at least 23,407 renewed - that's 55%.

And that 55% is an absolute worst-case number, because it does not include any grace period renewals or new vanity calls. The real renewal rate is much, much higher than 55%.
>
>I leave you to draw your conclusions on the meaning of these trend.

I think it means the restructuring mostly affected existing hams, who upgraded in large numbers. Slightly more newcomers were added than before. Still too early to gauge the long term effects.
>
Here's the really good news: The renewal rate for Techs, which was an unknown

for a decade because none of them had expired yet, appears to be very high. The AH0A data shows that in March, 2001 (the first month in which such epirations would show up) 208 Tech licenses expired - and 1,427 renewed. 1,427 renewals out of 1,635 total possible is better than 87% - and again, that 87% is a worst-case number that doesn't include grace period renewals or vanity calls. Sure, that's only one month's worth of data - so we'll keep an eye on it. My highly educated guess is that it's not a fluke, though.

As Rich McCollum has pointed out, about the only reason for nonrenewal these days seems to be death.

I want to stand up for the ARRL. I think they have followed their organization documents. The members have voted for and elected directors who have made tough decisions based upon the facts they know. Did you vote? Did you speak out?

Amateur radio is changing and the ARRL must be responsive to that change - whatever it takes. They are they best organization to represent amateur radio and in my opinion have done a great job. The directors are pretty much volunteers who spend a lot of hours doing their job.

I would like to thank the directors and the staff at ARRL.

Over the last 40 years I have heard this same sort of thing. ARRL this, ARRL that. I have YET to hear any serious suggestions to improve it (the ARRL). Just a lot of bitching.

Some time back, in the sixties, Wayne Green started up the 'Institute of Amateur Radio'. What a flop and what a goof.

So, anyone got some suggestions? some solutions? And BTW what exactly is the problem?

Up until now I have only taken ONE of the NG "opponents" seriously, and that's Lennie...Only because I know he is mentally ill and in need of help.

Now there are two. Lennie AND Hans.

Bitter, mean, and arrogant. I guess aging is a milestone we will all pass eventually. Hopefully some of us will pass it more gracefully.

Get help, Hans. Your bitterness will be your demise.

Jason,

With the present 5WPM requirement for all licenses except the Tech, it probably makes no sense to continue the Novice.

That being said, I am sad to see it go because I can remember how hard I worked to learn the code in order to pass it, and how excited I was when it finally came in the mail and I could get on the air. I was 13 at the time and though it was a big accomplishment then. I know I am probably in the minority in thinking that the Novice was the best way in to ham radio and thought that the FCC (in retrospect) was truely inspired when they instituted the Novice license in the early 50s. Some of my best ham radio memories stem from the year I was Novice.

I always thought that the FCC made a mistake when they took away the 2 meter voice allocation, and made a larger mistake later when they made the license renewable. The Novice license was really a learners permit that allowed you to slowly learn most of what you needed to become a capable operator. At one time it was either up or out. It was important to get your code speed up in order to get the General.

But times change. The Technician license is arguably easier to get, conveys more spectrum allocations, and well meets the needs of a large amount of people presently in ham radio. I wish that the FCC had "grandfathered" all Novice and Tech+ licensees to General, but it did not happen.

The restructuring of Amateur Radio may or may not make a difference in the service. The jury will be out for a while on this. My opinion is that there are really no more than two licenses needed now. A no code VHF /UHF license and a full spectrum allocation license.

>Ahem...that period begins two weeks before restructuring.

I know. If we are to consider the effects of restructuring, the last two weeks of April 2000 should be included in the totals.

>Hans Brakob used the 10-month period following
>restructuring...which I should have done too...
>
Why? The AH0A site contains information right up to the end of March, 2001.
>
>>Since April 15, 2000, the FCC has renewed all Technician and Technician Plus
>>licenses as Technician.
>
>For Technician-Plus license class the renewals can only be
>between 10 and 8 1/3 percent of all Technician-Plus
>licensees.

How do you figure that? The license expiration dates of Tech Plus and Tech licenses are not evenly distributed over the past ten years. One reason is that they were not issued at a constant rate. Another reason is that changes in vanity call rules caused a surge of Tech and Tech Plus vanity calls to be issued about 1994. Since the issuance of a new vanity call includes a renewal, the distribution of expiration dates is not uniform.

>The assumption seems to be that TechPlus
>renewals all abrogate their ability to "upgrade" but that
>doesn't seem to be the case.

Who is assuming that? Not me.

On the AH0A site, "renewals" are the number of licenses renewed in the 90 day window before they expire. Upgrades do not result in a new license. Upgrades do not result in a renewal unless the upgrade happens in the 90 day window before expiration of the existing license.
>
>For the Technician class licensee, the number of renewals
>will be small compared to all other classes because their
>initial numbers were small.

Not true.

The AH0A site shows that from April 2000 until December 2000 the number of Technician renewals averaged under about 500 per month. Practically all of these were Tech Plus renewals because none of the post-Feb-14-1991 Technicians were up for renewal until mid November, 2000.

In January of 2001 the number of Tech renewals was 812. In February 2001 it was
1,718 and in March 2001 1,472. The sudden rise is obviously due to the renewal
of the first post-Feb-14-1991 Techncian licenses.

> The Technician class has been
>renewing regularly since their first license term expired.

That only began at the end of November, 2000.
>

>Technician-Plus renewals transferred to Technician class.

It's not that simple.

If one uses the AH0A data, the Technician class license total is increased by
three things: new licenses, renewals from the Tech Plus class, and grace period
renewals. The Technician class license total is decreased by three different
things: expirations, cancellations, and upgrades to General and Extra.

>The surest possible way to ascertain of who went where to

>INCREASED by 20,221.

Nobody is debating that. What's your point?

> While those numbers for 12 months
>could be massaged more, it represents a bad comparative
>time since there were delays in licensing and class reassignment
>for up to two months following April 15, 2000 (see ARRL news
>for that period).

So? Why should those delays cause that period to be ignored?

>It would be better to go back to the original
>Brakob 10-month period and see the numbers from the end of
>June 2000 to March 2001.
>
Why do you want to ignore the period immediately after the April 15 changes?

>In the 10-month period the number of total Extra-Advanced-
>General-TechPlus-Novice licensees DECLINED by 10,943
>while the Technician INCREASED by 16,029. The net gain
>was 5,086. It is still growth. Of the Technician class increase
>15,970 were new licensees exclusive of any TechPlus
>renewal reclassification. That leaves the Technician class
>total change "off" by only 59 "others," presumably from the
>TechPlus renewal reclassification.

Nope. Your method of calculation is incorrect. You are assuming that no Techs upgraded to General or Extra during that entire 10 month period. That's simply not valid.

> Those 15,970 new
>Technicians still don't have any HF access with/without
>CSCEs.

Wrong again, Len. A Tech who has passed Element 1 but not upgraded to General or Extra gets Novice HF privileges.

>There is no valid way to explain the Extra-through-Novice
>class total decrease of 10,943 by any "Tech-Plus renewals
>to Tech."

One third to one half of that decline was caused by reclassification of renewing Tech Pluses as Techs. Add up the number of Tech Plus renewals, Tech Plus renewals in the grace period and Tech Plus vanity calls issued to get an idea of how big that number is.

> Attrition is happening among the code-tested
>classes.
>
Nobody denies that. What's your point? Do you want hams to die?

>>... It will be interesting to see how the trends evolve over
>>longer time frames.
>
>Why? The trend is still clear. The number of no-code-test
>Technician licensees had been steadily increasing before
>April 15, 2000, and one cannot deny that they are still
>increasing exclusive of any Tech-Plus renewal
>reclassification to Technician.

Nobody is denying that. But a significant cause of the apparent growth of the Tech and apparent decline of the Tech Plus is renewal reclassification.

> Technician class licensees
>ARE, in the majority, renewing in that class.

Probably true. In fact, most hams renew in their current class of license. Since upgrades are not tabulated in the AH0A data, there's no easy way to tell.

>
>The TREND has been present for a long time.

Which trend? The fact that the Tech class is growing? That's no surprise.

Tell us something new for a change, Len.

I got my Novice license in 1951 and would have been entirely happy with it but it expired after a year. The great majority of the thrill of ham radio for me was world-wide coverage with 40 watts on HF. For those young and/or non-technical potential hams who get no thrill out of talking on a local repeater and would get a thrill out of world-wide coverage using CW (or SSB on 10m), the loss of the Novice license is a considerable loss. If the Tech license had existed in 1951 instead of the Novice license, I would not have been interested.

Uh NO, again Cecil, just all in the evolution of workable procedures
and the education of the dunces in charge of such things at the time.
Then as now such decisions were made for reasons of economics, and only
after dreadful result, such as Titanic's sinking with such awful loss of
life, does the public demand for the improvements that should have
already been in place happen.

Are you advocating
> that all ships go back to CW for emergency communications, Dick? If not,
> exactly what are you advocating for ships?

Who said I advocate anything for ships? My remarks were by way of a
realistic explanation for the reasons CW was abandoned in maritime use.
But it is important that people know about the shortcomings and
potential failures of new systems.
They are far from foolproof. And no alternate means of emergency
communications are kept on board most ships.

Why do you assume that the "experts" opoinions had anything to do with
it?
As always, all such actions are driven primarily by ecomomics, not

expertise. If yo doubt that read Richard Feynman's "minority report to
the committe investigating the Space Shuttle Challenger disaster".

And why would I advocate "opreators standing by"? I would advocate CW
as a backup, but even that would require people to learn how to use it,
and your favorite organization, NCI would probably pitch a bitch again.

>conspiracy theory, suddenly the guy switches to SSB! Your whole rant is
>not believable.

I said "the latest QSL card" -- they continue to arrive. I'll be
glad to FAX you a copy of this card, or you can write directly to
KP4XA yourself to confirm that he sent me his card.

I'll quote him: "KH6O, Hi Jeffrey. Tnx for the 10-10#. It's the
second time to copy HI. Pse QSL. 73 -- KP4XA -- Edwin."

His QSO with "KH6O" was on SSB on 28.345 MHz.

You're just upset because your "explanation" (KH6MT sending my
callsign) is so silly.

>>You're opening yourself up to a defamation of character lawsuit
>>by KH6MT

>So sue me.

I have no reason to sue -- but once KH6MT learns that you falsely
accused him of bootlegging my call on SSB, he might be interested
in at least having you make a public apology.

When would it be necessary ... That has been my questions all along ... all
you cw'ers keep babbling about is weather reports and such traffic ... that
is not vital! If you are in a hurricane ... guess what ... you can count on
lots of rain and winds ... whether its 80f or 88f is totally irrelevant ...
(notice i used the "imperical" system for you old farts who haven't caught
on to the metric system either ... another outdated piece of horse pucky
that has seen its day come and go)

As far as the red cross is concerned ... canadian and international both use
commercial vhf in north america and abroad ...

There are a few reasons that I wish the Novice license was still
an entry-point option for new hams.

#1) The test was aimed at a middle-school level of education, kids in
the 4-7th grades roughly. The Technician license test is longer and
covers a higher level of technical content.

#2) Many people out here in "flyover country" cannot benefit from
a uhf/vhf-only license because they might be the only ham in their
town or county.

#3) Some people are interested in radio primarily for "long distance"
as opposed to "local" communications and experimentation. Such kinds of
interests are difficult to pursue above 30MHz, and are more suited to the
HF orientation of the Novice class priveleges.

well then if it is the only truly reliable mode than why is it so necessary
to know it before getting on hf and saving hte dya in all those fance
emergencies that apparentlyu kick up a lot of noise as to make ssb useless

enough typos for ya ?

Of course I never made such an accusation (but you already knew
that). I simply proposed that someone may have incorrectly
copied the morse "KH6MT" as "KH6O". I have never even suggested
that "KH6MT" was on SSB -- that twisted and tortured "explanation"
originated from you.

Good luck on this one now.

Hans, K0HB

Bullshit to the core. The only way a 19 year old kid could ship out as
a sparky was if he had a recommedation from a relative already in the
closed union and the starting rate was something like $10k in 1956. I
had the opportunity but I opted for engineering school instead. What
did you make in 1956 Lenny with yer First Phone, hmmm?

>"numbers station" sending encrypted messages]
>
It wasn't a commercial ship, I know shipboard cw operations, I have
the license, remember? It was slow cw and probably was encrypted comms
of some sort. I listened for 30 seconds and moved on.
>

Can they (ARRL) be sued? I'm not a lawyer. But an Attorney friend once told me in general conversation - ANYONE can be sued... "Winning" the case is another matter. Does the party launching the suit have legitimate grounds to even attract an Attorneys interest? Yes they get paid to do it, but I doubt any (intelligent) lawyer would insult his/her intelligence and reputation with a frivolous lawsuit. The case has to have merits. Otherwise, you are merely wasting your time and money. Can you prove the ARRL hasn't "tried" to do as they have said?

I'm not a member of the ARRL. I was back when I first was licensed (80s). I don't agree with all their policies either. Sue them? No..... Nothing worth suing for. It is just a dis -agreement of policies. I'm not saying they are totally wrong either. But I will say this, if it weren't for the ARRL, I think Big Business would have sucked up a good portion of, if not all of the Ham Bands - moons ago.

There was a comment made of whether the staff or board was doing volunteer work. To some extent, that is true, not sure to what extent. So to the extent that they are doing it free of their own time, energies and maybe dollars, you have to applaud them for that.

I too am a volunteer in other services. Being a volunteer is often a thankless job, but if someone didn't step up to the plate to do it, who would? Certainly not the critics. It is easy to whine and moan and groan. If you can't appreciate the efforts, step up and offer to help or stay out of the way altogether instead of making things worse. As the saying goes... "Lead-follow-or get out of the way".

The FCC is a governmental agency.... Overseen by the powers that be. Arm twisting can be done. It happened with the Code with the introduction of the Waiver/simplified testing. If I'm not wrong, King Hussein of Jordan (now deceased/Amateur Radio Operator) had a friend in the US that couldn't muster the grade for whatever reason, so he asked the President to help out. And, whalah! Code waivers......changes in the CW testing for those who couldn't copy it like thousands before them. My point is, they can also be"convinced" to cut the bands to sell off. Let's face it folks, the majority of the equipment manufacturers who make our beloved ham radios are also 2 way radio manufacturers. So, they won't lose out. They can merely stop production. They could do like Uniden did to the Bearcat parts inventory when they bought them out. DESTROYED ALL. No repairs to be made. Will it happen? I don't know, but it is feasible.

So, maybe we don't agree with the ARRL completely. Let them go down the tubes and see where we stand 15 years from now. If I"m not wrong again, they fought for scanner, tower and other rights, when the states started cracking down. How many of you whiners are ready to take on the fight - ALONE? I certainly can't afford a lawsuit for such a cause.
My cash is tied in to buying food and clothes and keeping a roof over my head. As much as I enjoy radio, it is still a HOBBY. My family needs come first and foremost. I may not support the ARRL presently in dues, but I DO

applaud the things they've done right. Someday soon, I will rejoin to help
ward off the wolves.

Technology is changing dramatically. WE (Ham Operators) and yes, maybe some
CBers as well, are a part of that process through developing modes of
transmission such as packet and so on. IF no one is there to stand up for
the rights of radio operators Ham and CB alike, it is highly possible, we
all will be taken off the air in the near future.

Enjoy your Ham/CB hobby today, for tomorrow, it could be GONE!

Just an opinion...my 2 cents.

Actually, this was a good suggestion for the possibility (until it was
disclosed that the names and the 10-10 number didn't match).  An "M" followed
by a "T" does constitute two dashes followed by one, which if one is lax on the
interletter spacing, could be mistaken for three dashes in a row, thus "O".

So why was this "jumped on" so quickly?

There's also the factor that until 1994, when the FCC started to print
"Technician Plus" licenses, any renewal occuring between 1991 and 1994 of an
existing "Technician" license was done as "Technician," not "Technician Plus"
as it should have been since all those renewals were for those who had passed
[at least] 5 wpm. Although many caught on and asked for correction, many did
not.

Hans, you made some excellent points. I have fond memories of my novice ticket (WN2CJV) which I received in 1962. I had a ball with it and struggled with morse and didn't get the general (WB2OSP) until 1964. A friend, WB2KAO, promised me if I copied for 15 minutes a night for a week I'd get it. He was right. One week took me to around 18 - then it got easy. With incentive licensing, I took and passed my extra, commercial telegraph, and 1st phone in 1966. After a stint in the Navy and two new calls (WA3RJX and N2JH), I let the tickets expire around 1980 - 81. I jumped back in in 1993 as AA2QA. I think some of the most fun I had was with that novice ticket ...

73 from Rochester, NY

Phone, that's why.

According to the QSL card, that QSO occurred on SSB; the phony
"KH6O" gave his QTH as Hawaii and his name as "Jeff." All on
phone.

If everything was driven by economics, we would have economic anarchy
but we don't. Wheelchair ramps are not driven by economics.

Electronic things get less expensive and more sophisticated with
time. It is progress for machines to replace people for mundane tasks.
It doesn't make sense to dedicate people to a situation that may happen
once in a blue moon. Such actions are driven by economics AND expertise.

In response to the question, I suppose I can answer since I am a lawyer.

You can sue almost anyone. Certain entities like the government and foreign countries may need to give you their permission. If you can show the lawyer that there is a lot of money to be made, he or she might take it on a contingent fee. Otherwise, you must pony up the cash up front to finance it. A small case like this would probably require $20,000 cash just to begin.

The next step is to show that you have special standing or are an injured party. If you are not a member of ARRL, your case would be thrown out unless it was something like an assault or some other personal injury.

Assuming you have standing, then you must show that ARRL did something that adversely affected you.

If you get that far, then you have to convince the court what they should do to remedy the problem. That would normally be an injunction or monetary damages.;

Griping will not cost a thing. But, it generally is not productive.

Colin K7FM

And any lawyer filing a frivilous lawsuit risks what are known
as Rule 11 sanctions - big cash penalties for filing a suit
which s/he knows - or should have known - has no merit.

The League president, vice presidents, and directors are volunteers, with the exception of the Executive Vice President (currently Dave Sumner) who is a paid employee. The directors are elected by the membership, and the officers are elected or appointed by the board of directors.

>of a giggle.

In 1956 there didn't appear to be any future in radiotelegraphy, either for me or for long-haul HF commercial communications or in any other radio service except maritime mobile, land-based LORAN, or a few scattered land stations still using the first mode in radio communications.

The only "GIGGLE" going on is some old fart sitting around chomping at the bit, wanting to fight, and weakly doing so by personal pejorative posting.

>>I was 23 1/2 when I got my commercial First Phone in 1956, senior.
>>Why should everyone have to lust for a life at sea? :-)
>>
>We all have the option of limiting our options.

A commercial license NOT involving your beloved morse code was much more of an attractive and practical option in 1956. Forty years later a commercial radiotelegraph license is of very limited options for a future in radio.

>>Chances are a "phone-licensed kid" who rode gain at a broadcast

>closed union and the starting rate was something like $10k in 1956. I
>had the opportunity but I opted for engineering school instead. What
>did you make in 1956 Lenny with yer First Phone, hmmm?

I could care less about 19 year olds of 1956. Working at WREX-TV, WRRR, WBEL, and WRRR in 1956 I earned enough to move west to California. Now why that is all some kind of "dispute" only Kelly can explain. As far as money is concerned, no problem, senior. We might compare salaries up to retirement, personal equity value, married status, etc., etc., etc. but that is not something about amateur radio policy is it? Or maybe you think you have some kind of "moral/ethical standard" for amateur radio just because you've been licensed for a while?

>I was never serious about it, I took the test just for the hell of it
>because the eaminer challenged me to take it. Makes a nice piece of

If you need wallpaper so bad, might I suggest the American Blind and Wallpaper Company? They have a nice website, selection of wallpaper patterns and colors, and specialize in mail-order...

>>No, because all your concentration is on ships and shipping for
>>radio use, emphasizing CW.
>>
>. . . while you struggle on trying to bury cw in irrelevancies . .
>just wasn't that way was it Lenny?

It is not irrelevant that OOK CW is burying itself in the inability to compete with all other communications modes in radio. It is relevant that many old farts still haven't got a clue that they are unable to compete in other radio modes, cannot stay with the state of the art, and want to endlessly dream of and demand adherence to old standards and practices.

>Like I never been there. I have three sub-500Khz-30Mhz radios Lenny.

Then go play with them. Don't come in here spitting and sparking because you feel a need for respect and don't get it. There's lots and lots of communications modes in radio, including HF radio, that don't involve OOK CW. Try learning about them, understanding them. Improve your self-worth. Or sit around the campfire bragging up old stories about when hams were Men and only did CW.

>>Then why did you ask if "as a 'with-it' communications professional,
>>did I already have a radiotelegraph license" in 1956?   :-)
>>
>You haven't answered the quetion, Why didn't you get that license
>Lenny?

Kelly is a Class A dumshit with short-term memory loss. Geez.

I didn't get any commercial radiotelegraph license in 1956 because there wasn't any future in commercial radiotelegraphy back then. Turned out I was right. There is even less of a future for radiotelegraphy 45 years later.

I got a commercial radiotelephone license in 1956 so that 45 years later some old fossils could get their giggles poking fun at that accomplishment because they were (later) so damned "superior" in CW skills, self-important, and need some "civilian" to hit on when they are frustrated. Was that the answer you want and need? Does anyone care?   :-)

>>Ahem...that period begins two weeks before restructuring.
>
>I know. If we are to consider the effects of restructuring, the last two
>weeks of April 2000 should be included in the totals.

You are forgetting the FCC's temporary backlog and slow response
to upgrading and new licensees in the month following April 15, 2000.
[that news was in all the ham periodicals and newsletters]

A truer picture of post-restructuring changes is to use FCC database
information beginning in June, 2000. Post-restructuring effect was
the main point of Hans Brakob's posting.

>How do you figure that? The license expiration dates of Tech Plus and Tech
>licenses are not evenly distributed over the past ten years. One reason is
>that they were not issued at a constant rate. Another reason is that changes
in
>vanity call rules caused a surge of Tech and Tech Plus vanity calls to be
>issued about 1994. Since the issuance of a new vanity call includes a
>renewal, the distribution of expiration dates is not uniform.

A truer picture of post-restructuring changes is to use FCC database information beginning in June, 2000. Post-restructuring effect was the main point of Hans Brakob's posting.

>On the AH0A site, "renewals" are the number of licenses renewed in the 90 day
>window before they expire. Upgrades do not result in a new license. Upgrades
>do not result in a renewal unless the upgrade happens in the 90 day window
>before expiration of the existing license.

Quit trying to be confusing and read Joe Speroni's own explanations. "New" licenses are truly new licenses, the individuals receiving them not being in the amateur radio database with any other amateur license or so indicated on the FCC's new database format. "Upgrades" are those already-licensed in previous database records or so indicated on the FCC's new database format. Since the FCC databases are updated daily, weekly, and monthly, the AH0A site tabulations may sometimes be in a "funny" date (such as 25 March 2001 as was recently posted there) or at some common date such as the of the last day of the month. The AH0A tabulations are not at 90-day increments.

>>For the Technician class licensee, the number of renewals
>>will be small compared to all other classes because their
>>initial numbers were small.
>
>Not true.

Sigh...In the beginning of the new Technician class (as that class is known as today, not the old Technician class which became "Technician-Plus"), their numbers started as ZERO and increased from there. Arithmetic progression.

>The AH0A site shows that from April 2000 until December 2000 the number of
>Technician renewals averaged under about 500 per month. Practically all of
>these were Tech Plus renewals because none of the post-Feb-14-1991
>Technicians were up for renewal until mid November, 2000.

A truer picture of post-restructuring changes is to use FCC database information beginning in June, 2000. Post-restructuring effect was the main point of Hans Brakob's posting.

>In January of 2001 the number of Tech renewals was 812. In February 2001 it
>was 1,718 and in March 2001 1,472. The sudden rise is obviously due to the
>renewal of the first post-Feb-14-1991 Techncian licenses.

"Obvious?!?" :-)

The AH0A site has tabulations for Total, New, Renewed (within 10-year period), Renewed In Grace Period, Expirations. The Speroni site no longer tabulates "upgrades" from or to another class.

>That only began at the end of November, 2000.

A truer picture of post-restructuring changes is to use FCC database
information beginning in June, 2000. Post-restructuring effect was
the main point of Hans Brakob's posting.

>If one uses the AH0A data, the Technician class license total is increased by
>three things: new licenses, renewals from the Tech Plus class, and grace
>period renewals.

Between the end of June 2000 and end of March 2001 the number
of NEW Technician class licenses exclusive of any renewals was
15,970. Between the end of June 2000 and end of March 2001 the
total number of Technician class licenses increased by 16,029.
The difference is 59...which have to be (by N2EY statement)
from renewals.

>The Technician class license total is decreased by three different
>things: expirations, cancellations, and upgrades to General and Extra.

The AH0A site doesn't tabulate "upgrades."

>>The total number of Extra-Advanced-General-TechPlus-Novice
>>licensees DECLINED by 13,646 while the Technician licenses
>>INCREASED by 20,221.
>
>Nobody is debating that. What's your point?

License classes Extra, Advanced, General, Technician-Plus,
and Novice all have HF privileges. Technician does not. All
classes have VHF-and-higher-frequency privileges. Hans
used the grouping of some-HF/no-HF versus all-HF in order to
show "more hams on HF after restructuring." If you don't see
the difference, why did you type all those words "objecting?"

Hans Brakob used a 10-month period after restructuring. I
used the period after restructuring. Jim Miccolis used a 12-
month period beginning BEFORE restructuring.

>So? Why should those delays cause that period to be ignored?

Hello?!? The public doesn't know new or changed-modified-etc
licenses until the FCC has processed all the applications and
made it official. [the FCC is the only amateur radio regulatory
agency in the USA]   If the FCC is "late" or "backlogged" to
delay applications, the public doesn't get to find out about it.
If the public doesn't know it, it can't be tabulated and those
who pick flysh*t out of pepper pots won't know it but those
will also try to load up from the adjacent salt pot and change

their numbers. :-)

>Why do you want to ignore the period immediately after the April 15 changes?

What did I just finish explaining?!? Geez.

>Nope. Your method of calculation is incorrect.

Geez...you want to begin number-chasing BEFORE restructuring
in order to comment on POST-restructuring effects? Tsk, tsk,
very BAD! Not at all correct.

>You are assuming that no Techs
>upgraded to General or Extra during that entire 10 month period. That's
>simply not valid.

In the period between the end of June 2000 and end of March 2001
there was a difference of 59 between the NEW licenses (exclusive
of renewals or other changes) and the change of Technician class
license totals over the same period. I never discounted anything.

You are attempting discrediting by a false statement of omission.
Bad form, OM, bad form.

>> Attrition is happening among the code-tested classes.
>>
>Nobody denies that. What's your point? Do you want hams to die?

I've never said anything about "dying." Quit lying.

My Webster's says "attrition" is defined two ways: "A wearing
away by or as by friction" or "A normal loss of personnel as by
retirement." The code-tested classes are, as a total, reducing
in numbers...by dropping out one way or another.

>Nobody is denying that. But a significant cause of the apparent growth of the
>Tech and apparent decline of the Tech Plus is renewal reclassification.

Good grief, no-clue, go and read the definitions of Speroni's
NEW license grants totals per month for 10 months (15,970)
against the total change in Technician class licenses for the
same 10 months (16,029). If you are going to say that a 59
difference is "significant," you are speaking with total and
near-absolute denial of the obvious.

Sorry, but your counter-argument FAILS badly in explaining
anything in regards to POST-restructuring changes. Go
away, say 100 Hail Hirams in penitence, and sin no more.

The Technician and Novice license were both created in the 1951 restructuring. The 1951 Tech had the same requirements as the General except for a 5 wpm instead of 13 wpm code test. 1951 Techs had all privileges on 220 and higher.

: assignment at 40m? or 10m, or maybe for ALL of HF?

Highly improbable. The HF spectrum is of little use to commercial
interests. The problem is the inconsistant propogation.

I wouldn't worry about anything under 2 meters.

I spent one to two hours per night, plus several hours per day on the weekends, studying code and radio theory for four months to get from Technician Plus to Extra Class. Unlike many people, Morse Code did not come easily to me. In addition to all the studying, I took an eight week code class. It was taught by a visually impaired ham, who was a truly gifted instructor. I put a lot of work into getting my Extra Class license, and when I finally passed the 20 word per minute code test, and three separate tests for General, Advanced (50 questions), and Extra (another 25 questions), I was proud of my achievement.

Now the FCC has taken my Amateur Extra license and made it an almost worthless piece of paper. It now only takes one 50 question test to get from General to Extra Class, and there is no code test whatsoever.

Forget the "code" versus "no code" debate. Shouldn't it be take the same level of dedication to reach Extra Class as it was before the FCC license restructuring? Shouldn't we have a license system which pushes hams to achieve things they thought they couldn't do?

I not only feel sorry for the old "Extra" Class hams who have seen their achievement devalued. I feel sorry for the new Extra Class hams, who will never feel the sense of pride the Extra Class license use to bring.

73,

Michael Adams
AC6ZK

. . .and today's 4 - 7th graders are more technologically savvy. I
think it evens out.

> #2) Many people out here in "flyover country" cannot benefit from

True. This means that they can either promote ham radio in their areas,
or upgrade to General.

> #3) Some people are interested in radio primarily for "long distance"
> as opposed to "local" communications and experimentation. Such kinds of

5 WPM isn't a difficult level to reach, especially when the reward for
that and another theory exam is a General license.

No, you did that, by deciding that your 20 WPM element was the reason
you got the license.

> It now only takes one 50 question test to get

That depends on your interpretation of the reasons for having ham radio
in the first place. Most of us are here to run radios. If you feel
that it is here simply to test your "dedication," then perhaps you
should consider a hobby in nuclear physics.

> Shouldn't we have a license system which pushes hams to achieve things they
thought they couldn't do?

You mean like accepting change?

> I not only feel sorry for the old "Extra" Class hams who have seen their

I feel sorry for you, thinking that the important thing is the exam.

> I feel sorry for the new Extra Class hams, who will
> never feel the sense of pride the Extra Class license use to bring.

If you say so. I'm looking forward to passing the exam soon, I'll let
you know if I have any sense of pride afterward.

My gut reaction was the same as yours but when it was all over I was still doing the same thing I did before for much the same reasons; I had lost nothing. Even having passed the 20, I always did feel anything beyond 12 was exactly what you called it, an indication of a level of dedication (or orneryness, or stupidity, or ego) for no particular purpose. Much like education, it is yours and it is portable. Among your peers nothing has been devalued.

Those who follow will have to discover it for themselves rather than being led into it. OK, so be it and amen. Time to move on.

Given the incredible grousing about a 5wpm test, perhaps it does need to be retained to show at least SOME level of dedication or orneryness, or stupidity. Ego we got lots of.

I thought "presentday Tech license" was implied.

What's all this feeling stuff? Do you have all those feelings about your
driver's license? The value of an amateur radio license, like a driver's
license, are the privileges granted by the license.

My God are full of yourself or what.

Maybe you need to sit down and have a look at yourself.

Maybe its not the people on the radio it is YOU!!!!!!!!

If this is all you have to bitch about you really need to have a good
hard look at yourself.

>Well how many people have you save using CW?

They at least number in the hundreds, but that was on the maritime frequencies over a 4 year period, and included copying distress and medical messages, issuing various severe WX warnings to shipping in the Pacific, issuing navigation hazards to shipping -- you get the idea.

>Are you proficient in medical first aid, CPR, and AED use?

Advanced first aid and CPR.

>If thing are so bad that CW and only CW will get through,
>you would probably do more good using your medical
>first aid, CPR and AED skills.

So you're saying that if conditions get so bad that only CW will get through, that someone will have a heart attack??? Gee, you shouldn't take DXing so serious, OM...

73, Jeff KH6O

Here Len, let me hold that mirror for you. Can you see yourself
alright? Are you telling Brian that he should go away and not comment
on these matters here in a public newsgroup?

Seems to me that I've seen you in here spitting and sparking because you
aren't given any respect here. Of course that doesn't stop you from
spitting and sparking.

Yes, but at the time, you said CW.... (That's even quoted above).

A voice mode does change that, but that's not what you originally started with.

>questions), I was proud of my achievement.
```

Michael:

Nobody has taken your achievement away from you. It is still there, you have still "earned" your Pre-Dumbing Down Amateur Extra Class License, just like all the rest of us who attained that status prior to April 15, 2000. You have a right to be proud of that achievement, and you can rightly state that the Post-Dumbing Down Extras are not your "equals" as radio amateurs. There is nothing wrong with them personally, but they have been made the victims of changing circumstances which have had the effect of diminishing their status as hams.

>Now the FCC has taken my Amateur Extra license and made it an almost
>worthless piece of paper.

It is nothing of the sort. It still conveys the same valuable privileges it did prior to the Dumbing Down. The only difference is that YOU were able to achieve this status under a significantly more challenging licensing structure. You have proven YOUR superiority. You have nothing to prove to your fellow hams who achieved Extra class in this past year; THEY have something to prove to YOU.

>It now only takes one 50 question test to get
>from General to Extra Class, and there is no code test whatsoever.
>
>Forget the "code" versus "no code" debate. Shouldn't it be take the same
>level of dedication to reach Extra Class as it was before the FCC license
>restructuring? Shouldn't we have a license system which pushes hams to
>achieve things they thought they couldn't do?

It would be nice if it still did, but you need to remember that we now live in a society where we not only share equal opportunities, but must now provide equalized outcomes as well. It wasn't "fair" for some people to achieve while others remained stagnant. The stagnant ones were tired of being chided for their laziness and lack of ambition, and began whining and complaining for a change to be made on their behalf. Those who thought they would gain an economic advantage by meeting this need followed suit. You know the rest.

>I not only feel sorry for the old "Extra" Class hams who have seen their
>achievement devalued.

There is no need for you or anyone else to feel sorry for me, Michael. I have a permanent record of my achievement as an Amateur Extra Class ham, and nobody can take this achievement away from me. The value of my achievement will remain unchanged for as long as I choose to remain licensed as an Amateur Radio Operator, and this applies to you and all other pre-Restructuring hams who attained General, Advanced, or Extra-class.

<I feel sorry for the new Extra Class hams, who will
>never feel the sense of pride the Extra Class license use to bring.

I have mixed feelings about that. Those who asked for the dumbed-down licensing requirements got what they deserved -- a devalued license with no meaningful accomplishments behind it. They have been given a free ride into higher privileges without having "paid their dues," as it were. They are here on an Affirmative Action program, like the clients of any Welfare State. They are to be treated with common courtesy and the same basic human dignity that anyone would deserve, but they are not to be heartily congratulated for having made any sort of brilliant "achievement," unless they are developmentally disabled to a fairly severe extent. Of course, hams with even fairly severe disabilities were still able to master

the Morse Code and pass the 20 WPM test for an Amateur Extra
class license; so if I have just insulted anyone in this category,
I hereby humbly apologize.

Jason:

Yes, it is a big loss.

>It seems to me that the No-Code Technician license replaced the
>Novice license as the most popular entry-level license.

You are truly a master of the totally obvious.

>The No-Code Technician requirement is similar to the Novice
>requirement; it simply
>replaces the 5 wpm CW test with the questions from the pre-restructuring
>Technician exam. In my opinion, studying for the Technician exam takes less

>effort than going from 0 to 5 wpm.

Once again, something that is totally obvious did not escape the
steel-like grip of your sharp mind. Congratulations for having an IQ
just barely above the "developmentally disabled" level.

>Furthermore, the fact remains that after the No-Code Technician license was
>introduced a decade ago, very few people obtained Novice licenses.

Is this guy good, or what? I'm impressed!

>Also, bringing back the issuance of new Novice licenses would require
>splitting the Technician license exam.

Wow. Jason, this is one of the most impressive restatements of
totally obvious and completely well-known-to-everyone facts I've
witnessed in this NG to date. The only thing missing is some kind
of point. What would that be, anyway?

>What's all this feeling stuff? Do you have all those feelings about your

>driver's license? The value of an amateur radio license, like a driver's
>license, are the privileges granted by the license.

Cecil:

Like an amateur radio license, a driver's license is something that requires those who have one to learn useful skills, and then demonstrate those skills to an examiner in order to have the privileges granted to them. Notice I said "privileges," not "rights." Therefore, drivers licenses and ham radio licenses must be "earned" and "achieved."

Now, I have gone beyond a normal driver's license. I have a Commercial Driver's License, CDL class B, with Passenger and Air Brake Endorsements. To attain this, I had to study for and take a CDL General Knowledge test, a Passenger test, and the Air Brake Test. I also had to take another road test under the watchful eye of an examiner from the DMV. I have done more, achieved more, and as a result, have the right and privilege of driving larger, heavier vehicles carrying more than 16 passengers. I also have the greatly increased responsibilities for safe vehicle operation that are expected of a professional driver. I realize it's not the same as a ham radio license, because the public safety and my company's economic future depend on my taking my responsibilities as a professional driver as seriously as they are intended to be taken. However a radio amateur who does not take his responsibilities seriously can also cause a lot of harm in the form of interference, so perhaps there is a direct comparison. That being the case, what is the harm in requiring that radio amateurs be required to demonstrate at least a fraction of the dedication as professional drivers must when attaining their licensing privileges?

>should consider a hobby in nuclear physics.

Keith:

I don't believe Michael was referring to quite that level of "dedication." The amount of dedicate effort required to master the Morse Code at 20 WPM is significantly less than that required to become a Nuclear Physicist. However, this dedication does impart a useful communications skill upon a person who has chosen a voluntary activity in which radio amateurs prepare to provide emergency backup communications services for their communities.

>
>> Shouldn't we have a license system which pushes hams to achieve things
>they thought they couldn't do?
>
>You mean like accepting change?

What if the "change" had gone the other way, Keith? What if we increased the number of theory questions by 50%, and kept the three-level code testing requirements with a 20 WPM top end? Would you have accepted that "change?" After all, it would have addressed the stated desire of the NCTA to diminish the overall importance of code testing as a licensing requirement!

>> I not only feel sorry for the old "Extra" Class hams who have seen their
>> achievement devalued.
>
>I feel sorry for you, thinking that the important thing is the exam.

Which exam, Keith? Code or theory? Or are you advocating "exam free" licensing?

>> I feel sorry for the new Extra Class hams, who will
>> never feel the sense of pride the Extra Class license use to bring.
>
>If you say so. I'm looking forward to passing the exam soon, I'll let
>you know if I have any sense of pride afterward.

Keith, you're entitled to any sense of pride you wish to confer upon yourself. However, you will have to face the fact that certain of your fellow hams will view your "achievements" through the filter of their own experience. Whether you believe this is "fair" or not is irrelevant; it is simple human nature.

The license has always been nothing more than a piece of paper authorizing certain frequency privileges, no different then a driver's license authorizes certain driving privileges. It has certainly never been evidence of skill, or knowledge, beyond what is specifically covered in the exam (which is very basic compared to the overall skills and knowledge associated with the subject of radio).

As a driver, I don't really care how long you studied for the exam, or what license you have - it is how you drive now that really counts.

Likewise, it is not the exam, but what you've done since, that determines your real value as a ham operator - your value to the ham radio community, your value to your neighbors and community, and your value when deciding how worthy ham radio is when it comes to it's privileges.

Now, if you've wrapped your ego up in that piece of paper, then you've wrapped yourself with nothing more than false pride. And I'm not sorry at all that you're now having to face reality. Perhaps these changes will finally force ham operators to realize that we're a community of equals (all in this together, for better or worse), not a community based on a class system.

Dear Dick and Larry,

I've got to hand it to you two Nobel laureates. You guys must also have psychic abilities and knew I was downloading an amateur radio newsgroup for the first time. Who do you think you are to attack this man and insult him for no reason. You know nothing about him and his life and yet you respond back to him with insults. What you two did flies right in the face of everything that Ham radio stands for. First and foremost with all Hams is the ideal of the dissemintation of information. It is how we inform and teach ourselves and others about our hobby which in turns causes us to gain

new members that strengthens our hobby and enrichens not only our lives but others as well. It is the same for all hobbies whether it is model rocketry, radio control cars and planes, Civil War re-enactments or any other hobby you can think of. Did either of you two ever think that maybe some people are happy just working the VHF/UHF bands? Maybe RG had a period in his life where he had to put his his hobby on the backburner and is just now getting back to it. I was going to reframe from attacking you two but since I took your comments personally you two are now fair game. Everyday I'm out there trying to convince kids and adults alike to realize that there are other things in life to do other than drugs, the television, and celebrity idealization. And in case your pea-size brains didn't think of it, children do have access to computers and may watching what you post. I know guys like you...I can time my watch to the way you act...No doubt you two probably have at least $50,000.00 apiece worth of ham radio equipment with huge towers and yet your front yards look like they could have been used as sets for the movie "DELIVERANCE". By way, your tickets are a privilege and not a right and thus can be revoked at any time!!! Oh yeah, one more thing -- my license is expiring this summer. I'm a no-code tech and would like to know how to renew my license////////

>well then if it is the only truly reliable mode...(SNIP)

No one said it was.

Please quote the author who said it was the ONLY reliable mode and thier exact words, please.

>than why is it so necessary to know it before getting on hf...(SNIP)

Because it is a requirement of an international treaty that (as far as I know) every soverign country is a signatory to.

>and saving hte dya in all those fance emergencies that apparentlyu >kick up a lot of noise as to make ssb useless...

No one said it was. This is a flame-inducing assertion that Lennie the Licenseless and a couple others keep alive. Those that support Morse Code useage have simply (and accurately) pointed out that it is the simplist mode and usually able to overcome other propagation and QRM deficits.

Unless, of course, you can prove otherwise?

>enough typos for ya ?

If you ENJOY being ignorant, I suppose.

>>>in the same way you believe the only true reliable method of radio >>>comms is cw ... such an out dated and ancient technique

>>Dick never said any such thing.

You have yet to prove Dick made the assertions you say he made. Or do you enjoy just making wild-pitch assertions you can't back up?

>by personal pejorative posting.

Obviously Lennie the Arrogant has been in an introspective mood again. This is about as "dead on the money" as you can get, Lennie, even if you won't admit it was yourself you were ranting about.

You should read some of your OWN writings. I bet if we sat you down, snipped paragraphs from all of our various posts INCLUDING YOUR OWN, you couldn't tell the difference.

>Forty years later a commercial radiotelegraph license is of
>very limited options for a future in radio.

And forty years from NOW almost any radio license or RF engineering degree will be useless...shall we just stop operating radios and stop sending kids to school because of what it WON'T be worth in 40 years?

>I could care less about 19 year olds of 1956.

And judging from your hate-spewn rants in here, I'd say it's safe to say you don't care about 19 yar olds from 1966, 76, 86, 96, 06, et al. If you didn't do it first or better, no one could do it.

>We might compare salaries up to retirement, personal equity value,
>married status, etc., etc., etc. but that is not something about
>amateur radio policy is it?

You never let it stop YOU before, Putzmeister. You have delved into SEVERAL rants on property you own, the value of your retirement, income from part time consulting, etc etc.

>Or maybe you think you have some kind
>of "moral/ethical standard" for amateur radio just because you've
>been licensed for a while?

Perhaps it's the same "moral/ethical standard" YOU apply by virtue of your alleged engineering experience or COMMERCIAL radio experience...?!?!?

>If you need wallpaper so bad, might I suggest the American Blind
>and Wallpaper Company? They have a nice website, selection of
>wallpaper patterns and colors, and specialize in mail-order...

We can roll it up and put it in the bathroom...right along where I have rolled up your "been there/done that" rants for some future use.

>It is relevant that many old farts still haven't got a clue that they are
>unable to compete in other radio modes, cannot stay with the
>state of the art, and want to endlessly dream of and demand
>adherence to old standards and practices.

And which of those "excuses" is why YOU, "Mr. Technology", continue to lie, harass and intimidate in a newsgroup for a radio service in which you have no vested interest...???

>Don't come in here spitting and
>sparking because you feel a need for respect and don't get
>it.

This is priceless, coming from a twerp who constantly whines about how Hams allegedly don't kneel sufficently before the "Great RF Technician".

>Kelly is a Class A dumshit with short-term memory loss. Geez.

He asked you a question. You responded with one of those profane "personal perjoratives" you are so fond of accusing others of levelling against you.

Pot/kettle/black. As usual.

>I didn't get any commercial radiotelegraph license in 1956
>because there wasn't any future in commercial radio-
>telegraphy back then. Turned out I was right. There is even
>less of a future for radiotelegraphy 45 years later.

Commercial Morse Code continued in use for another 40 years in the United States and continues in other countries. Seems you are wrong...again.

Guess I can stop learning new nursing techniques since they will all be obsolete in 40 years.

>Was that the answer you want and need? Does anyone care?

Obviously YOU do, otherwise you'd move on and stop being such a putz. But it has been clinically proven that retiree's without a point of focus generally succumb at earlier ages. Is that it..??? This IS your life? Couldn't make it on a park bench or playing shuffle board (requires being out in the light of day) so you sequester yourself in a dark room with your keyboard and bad attitude, determined to inflict you hatred and angst on others?

I think they call those people "sadists". You are a sadist, but just one that can't stand the sight of blood, so you suffice it to be annoying in this forum.

What ever spins your propeller, Lennie.

"An America Not Preapred For War In Peacetime Will Not Know Peace In Any Time."

>to upgrading and new licensees in the month following April 15, 2000.

No, I'm not forgetting those delays and backlogs at all.

>[that news was in all the ham periodicals and newsletters]

Yes, I know. What happened was that the surge of applications in the last two weeks of April caused many of them to be delayed. But others went through quickly.
>
>A truer picture of post-restructuring changes is to use FCC database
>information beginning in June, 2000. Post-restructuring effect was

By ignoring April and May of 2000, those applications that were not delayed, or
which were delayed only slightly, are ignored.That is NOT "a truer picture".

I can cut and paste too, Len. I think you know I'm right on these points, but
cannot admit it.
>
>>On the AH0A site, "renewals" are the number of licenses renewed in the 90
>day
>>window before they expire. Upgrades do not result in a new license. Upgrades
>>do not result in a renewal unless the upgrade happens in the 90 day window
>>before expiration of the existing license.
>
>Quit trying to be confusing and read Joe Speroni's own explanations.

I have. And I understand them. That's what the above is based on.

>"New" licenses are truly new licenses, the individuals receiving them
>not being in the amateur radio database with any other amateur
>license or so indicated on the FCC's new database format.

That's true. That's what I wrote. Upgrarades do not result in a new license.

>"Upgrades" are those already-licensed in previous database
>records or so indicated on the FCC's new database format.

"Upgrades" are not recorded separately in the AH0A data. They are lumped in
with modifications.

> Since
>the FCC databases are updated daily, weekly, and monthly, the
>AH0A site tabulations may sometimes be in a "funny" date (such
>as 25 March 2001 as was recently posted there) or at some common
>date such as the of the last day of the month. The AH0A tabulations
>are not at 90-day increments.

The 90 day window refers to the fact that the FCC will only process ARS license
renewals 90 days or less before the expiration date.
>
>>>For the Technician class licensee, the number of renewals
>>>will be small compared to all other classes because their
>>>initial numbers were small.

>>
>>Not true.
>
>Sigh...In the beginning of the new Technician class (as that
>class is known as today, not the old Technician class which
>became "Technician-Plus"), their numbers started as ZERO
>and increased from there. Arithmetic progression.

Not true. Again.

In 1991, all the FCC did was remove the code test from the Techician class
license. All of the then-licensed Techs who had passed 5 wpm still had Tech
licenses and the database did not record the difference.

It was not until 1994 that the "Tech Plus" license came to exist as a separate
license class.
>
>>The AH0A site shows that from April 2000 until December 2000 the number of
>>Technician renewals averaged under about 500 per month. Practically all of

>>Technicians were up for renewal until mid November, 2000.
>
>A truer picture of post-restructuring changes is to use FCC database
>information beginning in June, 2000.

No, it isn't.

>Post-restructuring effect was
>the main point of Hans Brakob's posting.

Restructuring started April 15, 2000.
>
>>In January of 2001 the number of Tech renewals was 812. In February 2001 it
>>was 1,718 and in March 2001 1,472. The sudden rise is obviously due to the
>>renewal of the first post-Feb-14-1991 Techncian licenses.
>
>"Obvious?!?"   :-)

Yes, because there is no other source for the sudden rise in renewals.
>
>The AH0A site has tabulations for Total, New, Renewed (within 10-year
>period), Renewed In Grace Period, Expirations. The Speroni site
>no longer tabulates "upgrades" from or to another class.

I know. You just figured that out, huh?
>
>>That only began at the end of November, 2000.

>15,970. Between the end of June 2000 and end of March 2001 the
>total number of Technician class licenses increased by 16,029.
>The difference is 59...which have to be (by N2EY statement)
>from renewals.

No, that's NOT what I wrote. And it's NOT correct. You are ignoring the effect
of upgrades. Why?
>
>>The Technician class license total is decreased by three different
>>things: expirations, cancellations, and upgrades to General and Extra.
>
>The AH0A site doesn't tabulate "upgrades."

But it DOES reduce the totals of the previous license class when an upgrade
occurs. Once a license is upgraded, it is no longer shown in the old license
class. All Techicians who upgraded to General or Extra in the June 2000 - March
2001 time frame are REMOVED from the Technician license total.
>
>>>The total number of Extra-Advanced-General-TechPlus-Novice
>>>licensees DECLINED by 13,646 while the Technician licenses
>>>INCREASED by 20,221.
>>
>>Nobody is debating that. What's your point?
>
>License classes Extra, Advanced, General, Technician-Plus,
>and Novice all have HF privileges.

True - but that wasn't K0HB's point. Tech Plus and Novice have minimal HF. The
others have lots of HF. BIG difference.

> Technician does not.

NOT TRUE in all cases. Renewed Technicians who were Tech Pluses have HF
privileges. Technicians who have passed Element 1 have HF privileges. This is
basic Part 97 stuff. You obviously don't understand Part 97, Len.

> All
>classes have VHF-and-higher-frequency privileges. Hans
>used the grouping of some-HF/no-HF versus all-HF in order to
>show "more hams on HF after restructuring." If you don't see
>the difference, why did you type all those words "objecting?"
>
>Hans Brakob used a 10-month period after restructuring. I
>used the period after restructuring.

And ignored the period immediately after restructuring.

> Jim Miccolis used a 12-
>month period beginning BEFORE restructuring.

Two weeks before resturcturing, so as to include all of the post restructuring
period.
>
>>So? Why should those delays cause that period to be ignored?
>
>Hello?!? The public doesn't know new or changed-modified-etc
>licenses until the FCC has processed all the applications and

>agency in the USA]   If the FCC is "late" or "backlogged" to
>delay applications, the public doesn't get to find out about it.
>If the public doesn't know it, it can't be tabulated and those
>who pick flysh*t out of pepper pots won't know it but those
>will also try to load up from the adjacent salt pot and change
>their numbers. :-)

Nonsense. The delays did not affect ALL of the applications.
>
>>Why do you want to ignore the period immediately after the April 15 changes?

>What did I just finish explaining?!? Geez.

Your explanation is faulty. There were thousands of post-April-15-2000
applications processed by the FCC in late April and in May of 2000.
>
>>You are assuming that no Techs
>>upgraded to General or Extra during that entire 10 month period. That's
>>simply not valid.
>
>In the period between the end of June 2000 and end of March 2001
>there was a difference of 59 between the NEW licenses (exclusive
>of renewals or other changes) and the change of Technician class
>license totals over the same period. I never discounted anything.

You did NOT include the fact that all Technicians who upgraded in that
timeframe are removed from the Technician license class totals.
>
>You are attempting discrediting by a false statement of omission.

No. I am pointing out your errors, Len.

>Bad form, OM, bad form.

The only "bad form" is your denial of the obvious.

Simple question:

When a licensee upgrades his/her license from Technician to General or Extra,
is the Technician license total reduced or not?

>>> Attrition is happening among the code-tested classes.
>>>
>>Nobody denies that. What's your point? Do you want hams to die?
>
>I've never said anything about "dying."

No, yiu haven't. But from the renewal rates, it's clear that the death of hams is the main cause of attrition.

>Quit lying.
>
Did I write that you wished for hams to die? No. I asked a question. If the answer is "no", all you have to do is say so.

>My Webster's says "attrition" is defined two ways: "A wearing
>away by or as by friction" or "A normal loss of personnel as by
>retirement."

You're not Cecil. Don't try to play his game. He's good at it. You're not.

>The code-tested classes are, as a total, reducing
>in numbers...by dropping out one way or another.

And the most common reason is....?
>
>>Nobody is denying that. But a significant cause of the apparent growth of
>the
>>Tech and apparent decline of the Tech Plus is renewal reclassification.
>
>Good grief, no-clue, go and read the definitions of Speroni's
>NEW license grants totals per month for 10 months (15,970)
>against the total change in Technician class licenses for the
>same 10 months (16,029). If you are going to say that a 59
>difference is "significant," you are speaking with total and
>near-absolute denial of the obvious.

No, I'm not. YOU are.

Your faulty math assumes that NO Technician licenses expired, were cancelled, or upgraded in the 10 month timeframe mentioned. That's simply not correct. Why do you deny the obvious, Len?
>
>Sorry, but your counter-argument FAILS badly in explaining
>anything in regards to POST-restructuring changes. Go
>away, say 100 Hail Hirams in penitence, and sin no more.

In other words, I've pointed out that Emperor Anderson has no logical clothes.
>
Try reading and understanding Part 97 and the explanations on the Speroni site. Your denial of the obvious is boring, Len/

How high is the dipole, Cecil?

Most real-world 40 meter 1/4 wave verticals won't beat a dipole a quarter wavelength high. Too many obstacles and too much ground loss, unless you have a wide open site and put down a lot of radials.

The answer is....oh no, you don't want that answer. It's old technology, dating back to the spark days.

Dropping the Morse code requirement to 5wpm has not decreased the dedication and skill that you have developed. You are still just as skillful and you still have the same privileges, i.e. nothing has been taken away from you. CW still has all the HF ham frequencies and still has all its capabilities to be used in emergencies if necessary. New hams who like CW will use it and their increased code speed will come naturally just like mine did in 1951.

The "I did it so they should have to do it" concept seems to keep creeping back into the discussion.

I didn't have to work nearly as hard for my high school education as my Dad did. He milked a cow and then rode a horse to school. He worked on the farm after school until dark, then studied by the light of a kerosene lantern, and went to bed cold in the winter. Should my Dad resent me because I had it easier than he?

It continues to amaze me that hams want to hang on to the past! Look at QST or any ham radio magazine and look at the great number of "silent keys" each month.   The fact is , like it or not, amateur radio is dying and if the something is not changed, you will not have anyone out there to talk to! It's obvious that you are retired and not in the business world or you would know that "change" is rapid and constant. Why? Survival? The same holds true with Amateur Radio. Enjoy your Extra Class licenses and the hobby and quit living in the past.

Larry

You are still confused, Larry. Examinations are not meant to test dedication. They are meant to to test qualifications. Licenses are not a certificate of dedication. They are a certificate of privileges granted after meeting the qualifications. Any citizen who meets the requirements, whatever they happen to be at the time, is qualified by definition. One person may already be qualified. Another person may have to study/practice for a year. They both get the same license. Dedication is irrelevant. Effort is irrelevant.

In the past, it was very difficult to qualify for a concealed weapons permit in Texas. Then Bush signed the concealed carry law and now it is relatively easy for a citizen of Texas to qualify for concealed carry. If you were one of the earlier concealed weapons carriers, would you feel disappointed that there are now lots more concealed weapons carriers? Qualifications simply change with time in every field (including amateur radio).

Incidentally, the murder rate in Texas has dropped 45% since Bush signed the concealed carry law.

Sure it does. And your attitude,"Technology will solve all ills" is the very cause of the Titanic disaster. Everyone believed the techies who swore that the all new hitech Titanic just COULDN'T sink, and that enough lifeboats to carry all aboard were just misuse of deck space. Sort of like you and your claim that CW will never be needed again in ham radio since there are better modes around...

I didn't say "everything", as you well know if you can read. Just everything that can be made to be is driven by economics.

> Wheelchair ramps are not driven by economics.

And what would you say about the the many years before wheelchair ramps were mandated - that they *were* driven solely by economics?

>
> Electronic things get less expensive and more sophisticated with

So then ham radio operators should just ignore all possiblilty that their stations may someday be needed for emergency comms. We see.

> Such actions are driven by economics AND expertise.

And we already know what predominates, and it isn't expertise.

N2EY wrote:
> How high is the dipole, Cecil?

My dipole is 40ft high and is one-wavelength long on 40m.

> Most real-world 40 meter 1/4 wave verticals won't beat a dipole a quarter
> wavelength high.

Note that I'm not talking about the direction of maximum gain for
the dipole. There should be some nulls off the ends of the dipole.
I want to see the vertical beat the dipole in *any* direction and/or
at *any* take-off-angle.

Modeling indicates that the vertical should be about 20dB better than the dipole off the ends of the dipole at a take-off-angle of 20 degrees. I want to see that happen in the real world.

I've got my 40m vertical up. All I lack being functional is installing a coax connector.

The grass around my vertical was about waist high. I bent down to pick up something I had dropped and heard a whirring noise. Zap, I was struck on the hand by a four foot long snake. I grabbed a towel, threw it over the snake, and wrapped it up in it. Around here, we have every poisonous snake in the US and one needs to know which one it was. Luckily, it was a harmless rat snake and non-poisonous. Those snakes have learned to imitate a rattler by rattling their tails in the leaves and that's what I heard. They have even evolved with a diamondback pattern although they are more colorful than a rattlesnake. So this morning, I have a couple of holes in my hand but no after effects. And I took the snake down to a little creek behind my house and let it go.

Dick Carroll wrote:
> Sort of like you and your claim that CW will never be needed again in
> ham radio since there are better modes around...

I have never made that claim, Dick. I said, IMO, it is *unlikely* that CW will ever again be needed for emergencies. What I have said is that CW skill should be left up to the discretion of the individual ham and not be implemented as a governmental affirmative action welfare program.

Some people value storage food and water for emergencies and some don't. It is a choice for each individual to make. If storage food and water is someday needed, the first group will be rewarded for their investment in a winning situation. If storage food and water becomes stale and has to be thrown out, the second group will be rewarded for their decision not to invest in a losing situation. Different strokes for different folks.

Some hams value CW for emergencies and some don't. It is a choice for each individual ham to make. If CW does save the day during an emergency, the hams who possess CW skill will be rewarded. If CW doesn't ever save the day during an emergency, the hams who had no interest in CW will not have wasted their time and effort learning and developing an unneeded skill. When the Morse code requirement is lifted, every ham will still be free to develop his CW skill to whatever level he chooses. What is wrong with live and let live?

That's the way a free country works, Dick. Every citizen should be free to assess the probabilities and decide to take personal action or not.

> for no reason.

You can wonder who you are if you want, we already know. It was time
for his reality check. Just because he was given a license doesn't mean
he's hoome free forever.

You know nothing about him and his life and yet you respond
> back to him with insults. What you two did flies right in the face of
> everything that Ham radio stands for. First and foremost with all Hams is
> the ideal of the dissemintation of information.

Hey, it was time that he learned that All Knowledge Flows From
Newington. If he hasn't learned even that, and owns a compter--what a
dunce. You too, maybe?

It is how we inform and
> teach ourselves and others about our hobby which in turns causes us to gain
> new members that strengthens our hobby and enrichens not only our lives but

> others as well. It is the same for all hobbies whether it is model rocketry, radio control cars and planes, Civil War re-enactments or any other hobby you can think of. Did either of you two ever think that maybe some people are happy just working the VHF/UHF bands? Maybe RG had a period in his life where he had to put his his hobby on the backburner and is just now getting back to it.

excuses, excuses.....

> I was going to reframe from attacking you two but since I took your comments personally you two are now fair game.

Well, Bryant, I was gonna 'reframe' from attacking you too, but what the hey...

> Everyday I'm out there trying to convince kids and adults alike to realize that there are other things in life to do other than drugs, the television, and celebrity idealization.

I gotta tell you, thanx for your efforts, but until your clients have the light go off that they, too, must strive a little for anything in life that is above the mud level, you can expect little in the way of success. 'RIGHTS without investment' is the biggest single factor that we face these days. A huge percentage of people, kids and their parents alike, have the 'right', so you dare not stand in the way. Good luck.

> And in case your pea-size brains didn't think of it, children do have access to computers and may watching what you post.

Maybe they'll get something besides 'feelgood' and ego massaging for a change.
No doubt you're a charter member of NEA...which never heard of the word Incentive.
(needn't ask, you might grab a clue that I'm familiar with it, too)

> I know guys like you...I can time my watch to the way you act...No doubt you two probably have at least $50,000.00 apiece worth of ham radio equipment with huge towers and yet your front yards look like they could have been used as sets for the movie "DELIVERANCE".

You are even more clueless than the character who couldn't even do an

online search for information before he jumped in with a 'simple'
question. Even more simple than the couple dozen on his test, to which
he had all the answers in advance. I guess since he didn't have this
answer in advance, he was stumped, huh?

By way, your tickets are a
> privilege and not a right and thus can be revoked at any time!!!

Stuff it, Pal, I don't need a pompous ass to tell he about my ticket.
I've had it longer than you've been alive.

Oh yeah,
> one more thing -- my license is expiring this summer. I'm a no-code tech
> and would like to know how to renew my license////////

So the advice stands for you too--go learn the Morse code then get back
to us.

I'm not dedicated to emergencies, Dick, are you? I am on standby for emergencies. That's a huge difference. It means that I can have a life outside of ham radio emergency communications. And hams should be free to either ignore or accept the fact that their stations may someday be needed for emergency comms. A lot of hams have no station at all. That's the way it should be in a hobby in a free country.

It seems rather obvious to me but in case it doesn't to you:

1. A ham who decides that he needs equipment and skills for emergencies is free to acquire such equipment and skills. A ham who decides that he needs CW skill for emergencies is free to progress to any skill level he chooses.

2. A ham who decides that he doesn't need equipment or skills for emergencies is free not to acquire such equipment and skills with the exception of Morse code. A ham who decides that he doesn't need CW skill for emergencies should be free not to acquire such skill but he isn't free to choose because of an outdated section of a treaty which requires a governmental affirmative action program.

All the FCC changed was the code test, it's still just as much
theory as before. Compared to a college degree, the extra
is like a 3 to 5 credit college course. Or maybe somewhat
similar to dreaming up a patent (I have a dozen of those).

The extra is still an achievement, but nowhere as big as
graduating college with a BSEE or getting a bunch of
patents. Think of a license as a step in the process of
going into a career in electronics, but not the last step.

An extra with a tech + callsign   73 de wa2ise

Oh geez...here we go again..."It's dying! It's dying!"

The same "it's dying" they were lamenting in the 40's, 50's, 60's, et al.

Someone get me a Bromo.........

lbratche wrote:

> It continues to amaze me that hams want to hang on to the past!

I don't know why you don't, but as for myself, I like the present. If you don't know about the huge amount of Morse on HF ham radio you haven't been listening for it.

Look at QST

> or any ham radio magazine and look at the great number of "silent keys" each month. The fact is , like it or not, amateur radio is dying and if the something is not changed, you will not have anyone out there to talk to!

This is the most fraudulant claim put forth by the codebashers to date. The death rate for hams is no different than the rest of the general population.
The percentage of hams showing up in the silent keys columns in the mags today is no more and no less than ever.
Ham radio dying? Shows what you *don't* know. The rate of growth has far surpassed the growth of the general population.

> It's obvious that you are retired and not in the business world or you would know that "change" is rapid and constant.

You have demonmstrated that you can'd discern the past from the present.

> Enjoy your Extra Class licenses and the hobby and quit living in the past.

What you can't change is the fact that radiotelegraphy is the simplest, most easily implemented mode of radiocommunications and has excellent efficiency as compared to other commonly present modes. That is as true today as it was in 1920. Why did all new hams start out on CW instead of voice modes when they had to assemble their first stations instead of flashing the platic at HRO like today? Because it was the easiest, most simple and effective gear to get on the air! That has not changed, and will not for the forseeable future.

You are still confused, Cecil. When the qualification for Extra class
license is reduced to approximately that of the previous Novice class,
the entire system suffers irepairably.

The original message, asking for license renewal information, was a troll. It was posted by someone who has been lurking in this newsgroup for quite some time, and who knows how certain individuals will respond to certain posts. Congratulations to all who took the bait by posting a negative response. You are now the laughing stock of the amatuer radio community. (As if you really care)

"Michael Adams" <michaeladams2000@no-spm.hotmail.com>
shared these priceless pearls of wisdom:

->Forget the "code" versus "no code" debate. Shouldn't it be take the same
->level of dedication to reach Extra Class as it was before the FCC license
->restructuring? Shouldn't we have a license system which pushes hams to
->achieve things they thought they couldn't do?

Yes, probably so. It is just that most of us believe that testing to Morse Code makes about as much sense as testing for circuit analysis of a type 45 triode tube. Other than nostalgia, neither one makes much sense. Nor do I believe that the new exam has anywhere near the technical complexity that it needs. Neither of us is well served by the current system.

->I not only feel sorry for the old "Extra" Class hams who have seen their
->achievement devalued. I feel sorry for the new Extra Class hams, who will
->never feel the sense of pride the Extra Class license use to bring.

I'm sorry for you, but I'm even sorrier for the system. My personal opinion is that the current question pool was made from a group of technical incompetents whose level of expertise in RF stops just short of a trivial series-parallel equivalent LC circuit calculation. It takes roughly two hours to memorize the "by formula" answers in the pool.

Nor do I believe that "the pool" shouldn't be published. However, as long as I've been teaching this stuff at the college level, I've NEVER given a rote memorization exam. So far as I'm concerned, my midterms and my finals have real kick-ass questions, but you get a week to take them home/library to find the answers. I'm not real sure how we implement this sort of a technique to the amateur Extra exam, but I'm sure there is a better way than we are doing it right now.

Guess I missed that one, Cecil ;-)

Point is, though, that the original Tech was truly a "technical" license. Back
then, there was practically no ready-made ham gear for 220 and up. One had to
either convert surplus or homebrew from scratch just to get on the air.

In article <20010407085909.26667.00000715@nso-bh.aol.com>, n2ey@aol.com (N2EY)
writes:

>>You are forgetting the FCC's temporary backlog and slow response
>>to upgrading and new licensees in the month following April 15, 2000.
>
>No, I'm not forgetting those delays and backlogs at all.
>
>>[that news was in all the ham periodicals and newsletters]
>
>Yes, I know. What happened was that the surge of applications in the last two
>weeks of April caused many of them to be delayed. But others went through
>quickly.

So...Miccolis has some kind of psychic power to see through
publicly-available databases to determine "quickness?" Goodie.

>By ignoring April and May of 2000, those applications that were not delayed,
>or which were delayed only slightly, are ignored.That is NOT "a truer
picture".

So...the subject was not POST-restructuring? OK...   :-)

It is called "'not' a truer picture" by others in an attempt to
dismiss an argument based on pique rather than on publicly-
available data.

>By ignoring April and May of 2000, those applications that were not delayed,
>or which were delayed only slightly, are ignored.That is NOT "a truer
picture".

Ah, but is data from PRE-restructuring somehow "valid" in
showing effects in a POST-restructuring period?

>I can cut and paste too, Len. I think you know I'm right on these points, but
>cannot admit it.

No, I know you are wrong on the POST-restructuring effects.

>>A truer picture of post-restructuring changes is to use FCC database
>>information beginning in June, 2000.
>
>No, it isn't.

Ah, so Miccolis has a priori knowledge unavailable to ordinary

mortals? The only valid license status is that after the FCC
has processed an application. If there is a backlog, those
applications are in a limbo and cannot be counted for a POST-
restructuring effect discussion.

>Restructuring started April 15, 2000.

Did all applications, new or "upgrade" or whatever, get
processed and recorded on that date? They were not.

>Saying it over and over doesn't make a falsehood any more true, Len.

Apply that to yourself. As far as Hans Brakob and myself were
debating-discussing-arguing a point, the point was POST-
restructuring. All that Miccolis is seeming to do is arguing a
different point and trying to show "errors" which aren't there.

>No, that's NOT what I wrote. And it's NOT correct. You are ignoring the
>effect of upgrades. Why?

I'm NOT ignoring "upgrades." They aren't included in what I am
saying because of a lack of definitive, quantitative data on the
number of "upgrades," who went from one class to another class.

If Miccolis wants to argue about the NUMBER of "upgrades," he
needs a quantitative value of that NUMBER that is available for
reference by anyone. Any other argument about "upgrade"
numbers is mere subjective opinion and not factual.

>Two weeks before resturcturing, so as to include all of the post
>restructuring period.

...so as to "include" FCC approval of PRE-restructuring
conditions...that's not a correct way of discussing POST-
restructuring effects.

>Nonsense. The delays did not affect ALL of the applications.

So, give us all a valid, quantitative number of those that were
approved immediately. The rest of us can only work from valid
publicly-available data and such basis is the FCC database
which the tabulators all use.

>Your explanation is faulty. There were thousands of post-April-15-2000
>applications processed by the FCC in late April and in May of 2000.

Nothing "faulty" about it. There is NO valid quantitative number

value on POST-restructuring APPROVED licenses until the FCC
has released the figures.

>>You are attempting discrediting by a false statement of omission.
>
>No. I am pointing out your errors, Len.

All that Miccolis has said is that "I made errors." Were those "errors" arithmetic? Were those "errors" from using the "wrong" data? The discussion on "Restructuring - did it make a difference" started out on the effects of US amateur radio license class privileges FOLLOWING the restructuring date.

>The only "bad form" is your denial of the obvious.

Which time frame is Miccolis using? Two of us in this thread were discussing the POST-restructuring effects. That period cannot be made valid by including data prior to the restructuring date.

>No, yiu haven't. But from the renewal rates, it's clear that the death of
>hams is the main cause of attrition.
>
>>Quit lying.
>>
>Did I write that you wished for hams to die? No. I asked a question. If the
>answer is "no", all you have to do is say so.

Upset? Miccolis made a loaded statement and it went off in his face. Wounds are not healed by trying to shift blame.

>>My Webster's says "attrition" is defined two ways: "A wearing
>>away by or as by friction" or "A normal loss of personnel as by
>>retirement."
>
>You're not Cecil. Don't try to play his game. He's good at it. You're not.

"Attrition" is clearly defined in dictionaries. Dictionaries are the accepted standards for word meanings...except possibly in this newsgroup when some cannot use valid numbers from publicly-available data, imply their own are more valid, then try to chastise others for "errors" in not accepting subjective, unreferencable data.

>>The code-tested classes are, as a total, reducing
>>in numbers...by dropping out one way or another.
>
>And the most common reason is....?

...whatever someone wants it to be, subjectively. There is NO reference point for the reasons behind dropping out. I gave NO opinion on reasons for dropping out.

Why do you continue to imply "wrongness" by manufacturing
conditions which did not exist?

>In other words, I've pointed out that Emperor Anderson has no logical
>clothes.

...only because Miccolis has tailored his response. [he made
the pants too long...with no buttons...]

I used publicly-available data over a time-period that is logical,
the FCC's processing time included, on post-restructuring. My
only subjective opinion statement was on the TREND of future
US amateur radio licensing and license classes.

>Try reading and understanding Part 97 and the explanations on the Speroni
>site.
>Your denial of the obvious is boring, Len/

The reading and understanding has been done here some while
ago. Miccolis should try to employ some logic to his own
statements rather than a lot of subjective (and imperious) remarks.

The only BORING part of this is attempting to establish conditions
and time-frames which have been WRONGLY applied by another.

Jim, you sound like one of my EE profs. He said that knowing exactly where to
find something is just as good as knowiing it. I keep my library on the
bookshelves so I don't have to remember everything. As I get older, I forget
a lot of stuff but I never have forgotten where than bookshelf is. :-)

You are confused, Dick. The qualifications for the Extra class license have NOT been reduced to approximately that of the previous Novice class. It only seems that way to you because you are more knowledgable now than you were when you took your Novice exam. Please get a grip on reality and realize that, no matter what a dumb-$hit you seem to be now, you were a lot more of a dumb-$hit in the past. And please realize that, in the 21st century, Morse code skill has very little to do with qualifications for an amateur radio license of any kind. You said in another posting that you like the present. If so, why don't your quit bitching, moaning, and whinning about the present?

Leland C. Scott and another amateur, doug adair, have conspired among each other and have been attempting to start all kinds of trouble in another group for quite some time now. A visit to the cb room will reveal a bit of these folks true nature. Do a back search and see how doug came into the group and how he digressed from there. Leland has just recently stepped up his forging of names of regulars in the other group, targeting me because he does not agree with my political views and, well, to be perfectly honest, he is a bit troubled. Leland has posted under the names "Punisha-of-keyclowns", "keyclown killa", many,, many anonymous names and cotse names, as well as a host of others. He has consistently trolled and posted filthy pornographic items to the cb room and has been forging many regs on there for quite some time, shamelessly letting another licensed fellow amateur take blame. I am a cber, but I have many ham friends. I do not use foul language, I do not use excessive power, and I do not trespass into ham bands. I feel the amateur community needs to be made aware when one of their own can not hold their contempt without stooping to such tactics. Beware this Leland, fellow. It is he that blackens the eye of good will between ops and his type that wish to foster animosity between cbers and ham ops. I invite any of you to peruse the cb room threads, see how Leland was caught red-handed, and make up your own mind. If a post contains obscenities, it was more than likely forged by Leland. This is the only post I shall make. Any others are forgeries. Have a good day.

Don't feel sorry for me. I have had an extra class license for almost 40
years,
and my license is not devalued a bit. In fact, it gets more valuable every
time
a new licensee comes on the air.

Well well,

"NO CW TEST means CB."

"And only CBers would want to eliminate the only thing keeping ham radio from becoming CB. It is high time for firm action to save ham radio from the CBers and the lobbying profiteers. (The FCC mentions "Kenwood" in a policy-making action eleven times!!)"

Encouraging a boycott of a major manufacturer based on their political (real or perceived) stance. Interesting idea. 73.

>>Yes, I know. What happened was that the surge of applications in the >>last two weeks of April caused many of them to be delayed. But >>others went through quickly.

>So...Miccolis has some kind of psychic power to see through
>publicly-available databases to determine "quickness?" Goodie.

I guess "facts" are something that you ahve a hard time with, Lennie? Some DID go quickly...some DID get delayed? YOU dispute this fact?

>>I can cut and paste too, Len. I think you know I'm right on these points, but cannot admit it.

>No, I know you are wrong on the POST-restructuring effects.

Lennie cannot agree on anyone's facts, right or wrong, as long as it counters HIS assertions.

>>Restructuring started April 15, 2000.

>Did all applications, new or "upgrade" or whatever, get processed and
>recorded on that date? They were not.

As ususal, Lennie steps in his own rhetoric within the same post...Here now we see him stepping in his "psychic powers" rib from the frst paragraph as he obviously employs his own powers to tell us what applications got processed on what date.

>>Saying it over and over doesn't make a falsehood any more true, Len.

>Apply that to yourself.

Nope...you first Lennie. You need it more than anyone else here.

As ususal...mostly kindergarten tit-for-tat "not meeeeee" stuff. The very obvious "return to childhood" of advancing age.

>Upset? Miccolis made a loaded statement and it went off in his
>face. Wounds are not healed by trying to shift blame.

A curious statement, in as much as this entire post was an attempt to band-aid his "wounds" from Jim's obvious "direct hit" on Lennie's poor math and statistical analysis.

>The only BORING part of this is attempting to establish conditions
>and time-frames which have been WRONGLY applied by another.

The BORING part is watching you, Lennie the Loser, once again try to worm your way out of a situation that you got yourself into.

>The only BORING part of this is attempting to establish conditions
>and time-frames which have been WRONGLY applied by another.

"An America Not Preapred For War In Peacetime Will Not Know Peace In Any Time."

  As we speak, "commercial interests" are running operational
  tests on spread-spectrum data transmission on HF.  We're
  starting to see the deleterious effects of concentrated
  "sharing" SS and conventional modes in the same spectral bands
  at UHF and SHF.

  HF propagation measurements and forecasts are routine now,
  courtesy of equipment, techniques, and studies funded by
  Uncle Sam's military purse and easily for sale to the said
  "commercial interests".

> >
> >No, it isn't.

I agree that it isn't. The FIRST "restructuring upgrades" appeared with processing dates of April 19, 2000. The only true baseline that can be used is the FCC database as it existed on April 18, 2000; the day before the first restructuring changes affected it.

> >No, that's NOT what I wrote. And it's NOT correct. You are ignoring the

Wrong. The FCC database has a field of "previous license class" for each amateur record, so it is exactly possible to determine who when from what class to what class. If the web site you're using didn't use that information, that's YOUR problem, but don't say that the information isn't available.

Excellent point, Cecil. I would just add the suggestion to remember that
the REAL purpose of a government-issued license, like the real purpose of
government itself, is to protect the rights of the people. In these cases
of vehicle and amateur radio licensure, those rights are protected from
infringement due to incompetent operation of whatever technological system
that impinges on the peoples' lives. Once that protection has been afforded,
the rationale for additional licensing qualifications disappears.

> In the past, it was very difficult to qualify for a concealed weapons permit

> that there are now lots more concealed weapons carriers? Qualifications
> simply change with time in every field (including amateur radio).

An excellent example of licensure (the old carry laws) being used to as a social-engineering platform rather than to protect the public from firearm misuse. Incentive licensing was another such social-engineering debacle that was supposed to encourage (ie: force) hams to become more competent by restricting their access to certain frequencies if they did not comply. Acquiring higher-class licenses became an end in itself and amateur radio was saddled with an entrenched credentialism that would have been the pride of any public-school teachers union.

Larry,

> It's obvious that you are retired and not in the business world or you
would

Let me get my flame suit on first. It's that obvious?

I hate to denigrate your perception, but I have a lot of years to go until retirement, and work in one of the fastest "changing" industries.

I don't think people should just "accept" change for the sake of change. If it is in the wrong direction, than "changes" should be made to make it go in the right direction.

Regards,

Michael Adams

Jim, an interesting point. Back around 1964 I visited a ham for whom another ham babysat his kids. He had a homebrew 440 transceiver. 1 tube. Superregenerative receiver. I was amazed (back then) by the tiny antenna. All of several inches at most. If he found someone else on, he could communicate for maybe a mile. That was when UHF truely was 'ultra'.

On Fri, 06 Apr 2001 09:36:26 -0400, Jason Hsu <jhsu-no-spam@cotse.com> wrote:

>I have heard many people lament that new Novice licenses are no longer issued
>and that they provided a good entry point into ham radio.
>

In it's day it certainly was. I had one in it's original form. One year drop-dead non-renewable license, the second letter in the callsigns were "n", Novices had small up-the-band slices of 80,40 and 15m cw plus 2m phone. Transmitters had to be xtal controlled and not run more than 50 watts input.

>
It was the advance of technology which eroded the usefulness of the
license. Back then there was very little VHF activity. Getting on 2m
was tricky and the equpment was alsmost all homebrewed. Of all the
dozens of Novices I knew none of 'em botherd with the 2m privelege.
There just wasn't anybody to yak with, range was very limited, etc.
>
Conversly the 80 & 40m bands virtually crawled with Novices which took
advantage of the piles of cheap WWII military surplus radios and
parts. Getting a 50w Novice station on the air for $50 and often less
was SOP. I managed a Novice WAS on 80 in a few months.
>
Then in the 60s along came cheap & plentiful tube-type commercial
surplus VHF FM radios and the stampede from the HF Novice bands to VHF
FM with Tech tickets was on. Today you can tune the 80m Novice band
for hours at night and never hear one. Interest in Novice band
operations has simply petered out despite the significant
liberalization of the Novice rules over the years.

So....what you learned has no value to you? I think you should be
proud that you passed the older test and will know more than current
Extra's need to pass. I feel NO "devaluation" in my Extra, in fact I think
it has increased in value since, like you, more went into it and you can't
get
these old Extra's anymore!!!
Chuck...K1KW

Concise and apt.  You might be surprised to know that such
"credentialism" has turned off more than one prospective
radio amateur.  :-)

>Superregenerative receiver. I was amazed (back then) by the tiny antenna.
>All of several inches at most. If he found someone else on, he could
>communicate for maybe a mile. That was when UHF truely was 'ultra'.

"Ultra?" A Class A Citizens Band transceiver (near the ham band) was available for purchase in 1958 (Class A and B, UHF CB was available before Class C and D on HF). Superregen receiver that was switched to be a modulated oscillator for transmit. Good for at least half of an LOS path length.

General Electric Company had microwave radio relay equipment on 1800 MHz in 1950, using 2C39 inverted lighthouse tubes for the LO and PA finals. Twenty-four voice channels. US military bought some, later designating them AN/FRC-23 in 1955.

International civil aviation adopted 118 to 136 MHz in 1956, and the US military went to 225 to 400 MHz for aviation comm in 1955.

All kinds of examples available for the pre-1964 period in radio other than amateur radio...

It's already been done by government radio services. Although
that is "preliminary," the major interest by both commercial
and military HF radio users is in ALE (Automatic Link Analysis)
techniques and protocol. ALE can be an intermediate form on
HF for many years in the future. [at least two licensed amateurs
are presently experimenting with ALE techniques on HF]

> We're starting to see the deleterious effects of concentrated
> "sharing" SS and conventional modes in the same spectral bands
> at UHF and SHF.

That's in shared bands at UHF and higher. Wait until UWB
starts to enter the lower microwave spectrum.

> HF propagation measurements and forecasts are routine now,
> courtesy of equipment, techniques, and studies funded by
> Uncle Sam's military purse and easily for sale to the said
> "commercial interests".

I recall ionosondes for HF first appearing just before 1950,
certainly available by 1952 for government-military use. The
measurement and observation of the ionospher for HF
communications has been going on for over half the existance
of all radio. The techniques (radio metrology) are well-known
and don't have to be any marketable item. Regular measurement
of the ionosphere is a service that can be provided by any
commercial interest from the 1960s onward.

On that, whatever happened to the worldwide HF beacon
system timed by the GPSS and written up in QST a few
years ago?

>>I wouldn't worry about anything under 2 meters.

>
> Famous Last Words.

Fact: Use of HF as a regular communications medium for
government and commercial users is declining but the US
military is, and has been using for ten years, the 30 to 88
MHz region for tactical NVIS communications, including
FHSS mode. Military aviation worldwide is going to hold
onto 225 to 400 MHz for air-to-air and air-to-ground-to-air
communications for a long while.

I can live with that, no problem. The most common source of already-
sorted, counted, and tabulated data is the AH0A website maintained
by Joe Speroni. Speroni does end-of-month tabulations although has,

in the past, done some "intermediate" totals such as March 25, a Sunday.

A problem with using an end-of-April tabulation on the Speroni site is that it includes license data existing prior to restructuring. That would make it a false month for discussing post-restructuring effects. The only dispute now would involve the month of May. May could be used as "buffer" time to let the backlog of license changes immediately following April 15 settle down. Using end-of-June 2000 to end-of-March 2001 is a ten-month period and should be stable enough to examine effects.

>> I'm NOT ignoring "upgrades." They aren't included in what I am

information,
>that's YOUR problem, but don't say that the information isn't available.

Available to the public, yes...available as tabulations on the AH0A site, not yet. Correction noted. Thank you.

It's a problem for anyone with "mere" 56K V90 modem connections to an ISP in that the two FCC amateur radio databases are 52 MB and 20 MB in size, license and application, respectively. A 52 MB file needs a bit over two hours to download, the smaller file needing about an hour additional. Then there is the problem of setting up a search-and-tabulate program, in itself a straightforward task following the revised data fields under the newer ULS formatting. It is much easier to use tabulated data already processed...since much other time will be spent in arguing against those who say that observation of AH0A site data is "wrong" when it is not wrong. :-)

The FCC does provide for Technician Plus previous-license indicator as the "P" in that data field. That statement comes from the FCC's Memorandum Opinion and Order 01-108, 6 April 2001, page 5 (.PDF file available on ARRL website). Incidentally, that same MO&O states (page 18, item 48) that all further 98-143 commentary and reconsiderations are "Hereby Terminated." :-)

As to effects of Restructuring, there is little evidence that HF-privileged US radio amateurs are expanding into HF, either by license class and special conditions thereof. The trend remains as it was before restructuring: Technician class seeing the 9 out of 10 new licensees and the early Technician class licensees renewing, all other classes as a group decreasing in number. One out of three US amateur radio licensees are now Technician.

If the trend continues it won't be too long before one out of two US amateur radio licensees are Techs. So much for morse code interest... :-)

I don't usually post to ham groups but there has been an awful lot of criticism of freebanding and freebanders in general. I have been in the CB tech repair business for years and have seen nothing but growth and expansion among freeband people. There is no sign this will soon abate, so it is high time SOME in the ham radio service face the facts.

Fact: hams should not be concerned at all about this issue. What goes on within 27-28 Mhz is none of their business.

Fact: most of the squawking is done by rule-obessed no-lifes who can't stand to see other people enjoying themselves.

Fact: high-quality SSB export radios like the Emperor, Ranger, Galaxy, and others that go from 25 Mhz to 32 MHz are being marketed by big companies because the FCC has admitted it can't be bothered to enforce trivial rules. If it is OK by the FCC then it is no one's business to squawk, ESPECIALLY hams who's frequencies are not part of the equation.

Fact: the same goes for RF power amps. Freebanders can responsibly run power and are capable of using it wisely.

Fact: many families out food on the table from businesses that operate to serve freebanders. There are much worse crimes to go after than those who ignore trivial and outmoded FCC rules.

All the bitching an moaning needs to stop and some mutual RESPECT shown between hams and freebanders.

Sir,
I agree that your rise to extra was truly do to hard work and desir. I think your story its most of the folks that have gotten their extra class. But i think you have missed the point entirely. Our hobby is not one that is shared my many individuals. Times have changed and we hams must change or we will be lost in the shuffle. You, like most hams think we have been given these bands we have by God.
They are not, they were given to us by the grace of government, and world agreement. Our bands are some of the most choice ones around. Don't think for one minute that if the big boys in the communication industry wanted the whole she-bang belive me they would get it. Where would you be - out in the cold like the rest of us. So instead of be-moaning the fact that code is not needed,but enjoy the skill that you have. If you and others like you don't wake up and smell the roses. You may find that instead enjoying this hobby you will have alot of expensive junk. By the way do you ride a horse to work. You know what happened to fellows that laughed at Henry Ford? Well neither do I. Nobody remembers the nay sayers. You could encourge new hams to join our ranks then display your code skills let that
be testament. You know the old saying you draw more flies with honey than vineger.
73's and gud sending
N5LEV

Okay, but the people who are allocated this spectrum might not be
happy about this.

The rules aren't just some arbitrary kids' game, they exist so everyone can
benefit from the use of radio spectra.

What a moron. A troll AND a moron. When this bozo get done fixing illegal CB crap, he probably hangs out near elementary schools with bags of candy.

I have seen enough of your posts to know you usually make sense -- a lot more sense than you are making here.

1. Your tormentors have in general been Codeless Techs who seem to be in need of love. Below 28 MHz most of us old guys could not care less; I sure as hell don't. To some extent you are reaping the fallout of some interesting politics within the Amateur Service but we can't keep headcases from passing exams any more than you can prevent their buying radios.

2. Beyond that, substitute 'methamphetamine' for 'freeband' and look at your post again. Lots of things exist that would not in an ideal world. Doesn't make them desirable.

3. A gentleman, it is said, is one who ignores the trivial, is a cast-iron SOB about more important things, and has sense enough to know the difference. Lots of things exist in the 25-35 MHz range including the ten-meter ham band. Are we supposed to roll over and play dead?

4. RESPECT is an interesting term. The black community picked up one version of it from cracker whites and it has gotten a number of them killed. Do you expect deference from outlawry? If so, what is the difference between a freebander and a pimp? Diana Ross notwithstanding, R-E-S-P-E-C-T (sock it to me) is no way to run things.

If you mean genuine admiration for achievement, for what might this be extended?

If the idea is 'make nice' and don't state the obvious, take it up with the chaplain.

In my football coaching days, I set as the ideal for respect having the other team lurch toward the showers beat to shit but saying something like, "And they beat the crap out of us within the rules". It is the difference between competition and thuggery, the difference between a boxer and a street brawler.

5. No discussion of 'power' is complete without pointing out that it is blessed useless in the lo-VHF frequencies. If 100 watts won't do it, fix your antenna, learn to operate, or go home. Manhood problems are no excuse for moose and dirty linears on either side of 28.

There is a basic lack of understanding: Given that a few weeks with Morse Academy http://ah0a.org and some quick bathroom reading at irregular intervals will make 28.3-28.5 legal in no time and some more reading while picking up the kid at school will make all of ten meters legal, there isn't just a lot of sense in freebanding, period, if communication is the object of the exercise. So amateurs tend to suspect that freebanding has much the same motivation as mis-aimed fog lites on a clear day, "Look at me, I'm Sandra Dee, lousy with virginity." The lamps are known as Virginity Lights in some circles; watch some dude with his 'kewl' pickup (or the ubiquitous Blazer) howl when the arresting officer notes that on the ticket.

The essence of your argument is 'prepare to be overwhelmed'. OK, I am prepared.

Dick N�BK

The FCC does provide for Technician Plus previous-license indicator
as the "P" in that data field. That statement comes from the FCC's
Memorandum Opinion and Order 01-108, 6 April 2001, page 5 (.PDF
file available on ARRL website). Incidentally, that same MO&O
states (page 18, item 48) that all further 98-143 commentary and
reconsiderations are "Hereby Terminated." :-)

That includes a WAD petition for reconsideration to restore 20wpm
for extras. FCC says no, it's gonna stay at 5wpm.

see
http://hraunfoss.fcc.gov:8888/edocs_public/attachmatch/FCC-01-108A1.txt
for the gory legalistic details.

Quoted text about the "extra lite", aka "novextra" (note that I am one):

As noted above, the Commission eliminated the twenty wpm Morse
code
proficiency examination as a federally mandated licensing
requirement
because it was not in furtherance of
the purpose of the amateur service and it did not continue
to serve a regulatory purpose. 41 WAD II has
not shown that the Commission�s conclusions were in error.
Further, we note that since the Report and
Order was released, there does not appear to be any
decline in the proper operation of amateur stations. 42

end quote.

I listened to the HF bands before April 15, 2000, and I haven't
seen any decline that wasn't because of newbie errors (which
go away as we newbies learn and correct ourselves).

I am studying for my ticket and came across some questions refering to a "Gentlemen's Agreement".

Ex.

Which of the following frequency ranges is reserved by "gentlemen's agreement" for DX contacts during international 6-meter contests?

D. 50.100 to 50.125 MHz

--

A quick look in the ARRL Handbook and I didn't see anything about this "agreement"? Where is this written if anywhere?

Thanks,

Scott McClements

I have always thought that was why the original Tech was begun, so that anyone interested would help develop VHF/UHF, which was almost unused in 1950. Virtually no gear was available and what was was exremely expensive. I don't know how much good the Tech ticket actually did, virtually all the few I ever knew in the 50's-60's were definitely not inventors or developers. Of course YMMV.

Bull$hit Cecil! He said old Extras live in the past. We don't. We DO
know
the practical value of radiotelegraph communications.

Do you get the feeling in the pit of your stomach that the ARS is being
set up
for a Humpty-Dumpty type of fall? There is a nagging feeling that all
this
dropping of qualifications that shoves the ARS ever closer to a CB-like
atmosphere is not without some goal in mind......

 Yep, that's one reason. Of course there are others. The fact that some
observers don't agree doesn't negate them.

I have seen enough of your posts to know you usually make sense -- a lot more sense than you are making here.

"What about you, Dick? In rec.radio.cb you support freebanding and amps. Here you act snotty. Hmmm?"

1. Your tormentors have in general been Codeless Techs who seem to be in need of love. Below 28 MHz most of us old guys could not care less; I sure as hell don't.

"That's the Dick we know and love. Good boy. Don't step out of line again mister"

To some extent you are reaping the fallout of some
interesting politics within the Amateur Service but we can't keep headcases from passing exams any more than you can prevent their buying radios.

"If you are an example of this you are a prime one. Enough said"

2. Beyond that, substitute 'methamphetamine' for 'freeband' and look at your post again. Lots of things exist that would not in an ideal world. Doesn't make them desirable.

"Realism is the mark of a true intellectual. Let us see if you can pass the test"

3. A gentleman, it is said, is one who ignores the trivial, is a cast-iron SOB about more important things, and has sense enough to know the difference. Lots of things exist in the 25-35 MHz range including the ten-meter ham band. Are we supposed to roll over and play dead?

"In a word, yes. The opposition is overwhelming. The old must go out and the new must come in. Your hobby is dying. If 10 and 12 meters must fall, you have no choice but to let it"

4. RESPECT is an interesting term. The black community picked up one version of it from cracker whites and it has gotten a number of them killed. Do you expect deference from outlawry?

"What about the outlawry of 3950 and 14310? Your slip is showing Dick"

If so, what is the

difference between a freebander and a pimp? Diana Ross notwithstanding, R-E-S-P-E-C-T (sock it to me) is no way to run things.

"Simple. But we the enlightened do not expect you to understand. Freebanding harms no one. Pimping does. Except when it is a ham turncoat like you lurking in rec.radio.cb waiting to rat out CBers"

If you mean genuine admiration for achievement, for what might this be extended?

"It might be extended to freebanders and those that want to operate radio transceivers without the complications of licensing. A little respect is in order to your betters"

If the idea is 'make nice' and don't state the obvious, take it up with the chaplain.

"You and your dying hobby need a prayer, not me and mine"

In my football coaching days, I set as the ideal for respect having the other team lurch toward the showers beat to shit but saying something like, "And they beat the crap out of us within the rules". It is the difference between competition and thuggery, the difference between a boxer and a street brawler.

"Following rules does not a man make. If the Constitution prevents me from talking on 24 MHz I want to see where it is written so"

5. No discussion of 'power' is complete without pointing out that it is blessed useless in the lo-VHF frequencies. If 100 watts won't do it, fix your antenna, learn to operate, or go home. Manhood problems are no excuse for moose and dirty linears on either side of 28.

"Too bad for your POV Dick. What we want we will simply take. Time you learned the rules, boy"

There is a basic lack of understanding: Given that a few weeks with Morse Academy http://ah0a.org and some quick bathroom reading at irregular intervals will make 28.3-28.5 legal in no time and some more reading while picking up the kid at school will make all of ten meters legal, there isn't just a lot of sense in freebanding, period, if communication is the object of the exercise. So amateurs tend to suspect that freebanding has much the same motivation as mis-aimed fog lites on a clear day, "Look at me, I'm Sandra Dee, lousy with virginity." The lamps are known as Virginity Lights in some circles; watch some dude with his 'kewl' pickup (or the ubiquitous Blazer) howl when the arresting officer notes that on the ticket.

"There you go again with the authority figures. They do not scare us, Dick. Take off the bogeyman costume"

The essence of your argument is 'prepare to be overwhelmed'. OK, I am prepared.

"I hope you are prepared for freebanding to prevail and spread to your precious hammie bands"

Dick N0BK

You are still confused, Cecil. When an applicant can pass all tests through Extra without knowing anything significant about radio theory or practice, and needs only 5wpm code, the de facto reduction of Amateur Extra class licensing standards to the Novice level is fait accompli, whatever name is attached to it.

My current level of knowledge has nothing to do with it beyond my ability to see and understand what is there.

Before anyone goes berserk, this is a classic forgery of the type that has been going on for a long time. Our friend and buddy Leland Scott at work.

It is more than likely I fell for the first one.

You've been shouting that the sky is falling ever since you joined this newsgroup, Dick. Freebanders have not overrun the ARS, CW is still being used, and the sky is still where it should be.

But you don't know the practical value of reducing the Morse code
requirement to 5wpm. You don't like the present after all.

Please name a few Extras who don't know "anything significant about
radio theory". Besides yourself, of course.

>

Freebanding is OK because it's lesser crime than some other crimes?
The bald-ass bottom line is that under existing federal statutes a
freebander can wind up in a federal slammer and so can the suppliers
of the equipment he uses. You have to be a complete idiot to put you
and your family at any such even remote risk. There's a guy out there
right now who just got whacked by the FCC with a $17,000 forfeiture
for operating in the ham bands without a ham license. That's a lotta
pork & beans. Another one is doing some hard time. It can't happen to
you, huh?

>

I operate in rhe low end of the 10m ham band, I'm in there with the
freebanders and they're a minor nuisance from the operational
perspective. But that's not what pisses me off, what pisses me off is
that they're a bunch of criminals, abusers of other folk's rights
under law and they're anarchists. There is no room for you people in
American society never mind 10m.

>

And you come in here expecting "respect" for any of it? Whatta twisted
asshole! I've been ignoring the freebanders on 10, I think I'll start
paying "more attention" . . .

Don't for get, Larry, to these guys anything that disagrees with their opinions is harassment. Remember their characterization of CW testing as a "hazing ritual" instead of a qualifying test.

I don't think that under ITU regulations they can do that on HF...I'm
worried about 2-meters and above.

Keys must have evolved over the years. The key used in the depiction
had an upside down tear-drop shaped "knob". There wasn't a horizontal
surface anywhere on the knob like there is on a J38.

Subject: Re: Restructuring -- did it make a difference
Message-ID: <20010405011731.27365.00000863@nso-ff.aol.com>
Xref: supernews.google.com rec.radio.amateur.policy:18720

In article <20010404213411.25479.00000559@nso-fz.aol.com>, n2ey@aol.com (N2EY) writes:

>Here are some numbers from the AH0A website to consider.
>
>From March 31, 2000 to March 31, 2001:

Ahem...that period begins two weeks before restructuring. Hans Brakob used the 10-month period following restructuring...which I should have done too...

>Since April 15, 2000, the FCC has renewed all Technician and Technician Plus licenses as Technician.

For Technician-Plus license class the renewals can only be between 10 and 8 1/3 percent of all Technician-Plus licensees. The assumption seems to be that TechPlus renewals all abrogate their ability to "upgrade" but that doesn't seem to be the case.

For the Technician class licensee, the number of renewals will be small compared to all other classes because their initial numbers were small. The Technician class has been renewing regularly since their first license term expired.

>Also, a ham who holds a Technician license and has passed Element 1 (5 wpm code) has Novice/Tech Plus HF privileges, even though the database simply shows "Technician" as the license class. There is no easy way to determine exactly how many Techs are actually Techs with HF, because the FCC does not keep that information in its database. A lower bound on this number can be found by adding up the number of Technician renewals from April of 2000 until October of 2000 (3273) This works out to an average of 467 per month, or 5,604 per year, being reclassified from Tech Plus to Tech because of renewal.

There is a more sure to determine the number of Technician-Plus renewals that were made Technician or to separate the originally-Technician-Plus from Techician by going to the NEW license, RENEWED, and RENEWED WITHIN GRACE PERIOD tabulations. Since there are no new Technician-Plus license class grants, one can simply subtract the new Technician license number from the Technician class total to see the number of Technician-Plus renewals transferred to Technician class.

The surest possible way to ascertain of who went where to what is by downloading the Amateur database on a regular basis and searching all records. :-)

>The total number of "lots of HF" licenses (General/Advanced/Extra) rose from
>288,820 to 319,381 - a gain of 30,561 (10.5%). This is what K0HB is referring
>to in his post - more hams with lots of HF privileges.

The total number of Extra-Advanced-General-TechPlus-Novice licensees DECLINED by 13,646 while the Technician licenses INCREASED by 20,221. While those numbers for 12 months could be massaged more, it represents a bad comparative time since there were delays in licensing and class reassignment for up to two months following April 15, 2000 (see ARRL news for that period). It would be better to go back to the original Brakob 10-month period and see the numbers from the end of June 2000 to March 2001.

In the 10-month period the number of total Extra-Advanced-General-TechPlus-Novice licensees DECLINED by 10,943 while the Technician INCREASED by 16,029. The net gain was 5,086. It is still growth. Of the Technician class increase 15,970 were new licensees exclusive of any TechPlus renewal reclassification. That leaves the Technician class total change "off" by only 59 "others," presumably from the TechPlus renewal reclassification. Those 15,970 new Technicians still don't have any HF access with/without CSCEs.

There is no valid way to explain the Extra-through-Novice class total decrease of 10,943 by any "Tech-Plus renewals to Tech." Attrition is happening among the code-tested classes.

>... It will be interesting to see how the trends evolve over
>longer time frames.

Why? The trend is still clear. The number of no-code-test Technician licensees had been steadily increasing before April 15, 2000, and one cannot deny that they are still increasing exclusive of any Tech-Plus renewal reclassification to Technician. Technician class licensees ARE, in the majority, renewing in that class.

The TREND has been present for a long time. It is unfortunate that so many PCTAs keep denying the obvious.

> Decision.

Let's look at a couple of his points

~
> Since 1985 California has had an aggressive program utilizing Amateur
> licenses. That year the state legislature mandated a paid staff coordinator
> with directions to enhance and expand that public service function involving
> amateur licensees. In April 1985 we began a series of education bulletins
> statewide at a time when there but three RACES units in the state. Today
> almost all of the 58 counties have an emergency communications unit based on
> the Amateur licensees; and our weekly EMCOMM Bulletins have would-wide
> distribution in addition to every state in the country.
>

Bottom line: another level of government bureacracy has been created,
with the
usual (unstated) mandate that the first order of business it to
perpetute itself, and that of course means 'get the numbers up, however
it an be done'.

> In so far as we know, our program � the leader in the nation � is the only
> one with a paid staff position created by the state legislature to support
> the use of Amateur licensees in service to their communities.
>
> In 1987 the American Radio Relay League requested that the statewide

> Bulletins be placed in the Amateur packet radio networks around the U.S. In time they became the standard in the US, replacing s defunct FEMA education program. Today these Bulletins are the source of education information for emergency communications units based on Amateur Radio. They are literally on hundreds of bulletin boards and Internet sites around the world.
>
> Because we are involved daily with quintessential public service � their use in and for local government, we have a broader experience of Amateur license activities that than most petitioners. Our program is the recognized model in the U.S., Canada, Australia, New Zealand, England and other countries worldwide. The weekly EMCOMM Bulletins are on the worldwide Web at www.acs.oes.ca/ . Our Manual, titled the �establishing and maintaining an Emergency Communications unit for government�, is the only one of its kind in the country.

So why has no one ever heard of it?

> a. California eliminated the use of CW some years ago. Although we have a large and extensive communications center staffed for and with Amateur licensees, we had not used CW in decades. We retained a CW net until 1995, but it served no essential purpose, just once-a-week training for 3-5 participates. No county governments participated for years.

Pretty much like everyone else. But when did state or county governments ever participate in amateur radio at any level?

> b. The US Coast Guard also eliminated the use of morse code several years ago, which is further evidence of its lack of applicability to today�s communications needs.

Wrong. It was done as a moneysaving device in that it eliminated the requirement for a skilled operator, coupled with fact that technical developments now allowed for automatic emergency signalling without human intervention. But the new system is far from foolproof. Duties formerly performed by the radioman are now routinely assigned to busy deck officers who already had their hands full and who often turn off the annoying alarms because of falsing.

The new systems are better in some ways, and far worse in others. In no way to they replace the thousands of humans who once had their full attentions to the radio distress frequency. Any distress call was immediately heard far and wide by a great many operaors in a great many places, both on land and sea, and getting the closest help started immediately toward the distress location was assured. The satellite alarm system is automated, with all calls going essentially through a single system to a single point, and the exact nature of the problem that caused the call cannot

be determined by the operator who receives it. There is no direct
contact with the vessel in distress nor humans aboard. The system, while
streamlined and technically sophisticated, is nowhere nearly as
thoroghly capable from a communciations point of view.

> Today, our information systems are based computer based and operate by both
> wire and wireless. If the Amateur of today is not familiar with computers
> he/she is of little use.

Typical codebasher's strawman. What ham today isn't familiar with
computers?
And who says that non-computer communciations are less capable of
getting the job done? He is simply wrong.

A background in computer experience and knowledge
> is far and away more important than that of CW.

True. Until the computers are no longer useable and CW still is.

> When I became licensed in 1941 Amateur radio was the means of alternative
> communication. Today, the computer provides that, hence thousands of those
> who would otherwise be FCC Amateur service licensees never apply because the
> service does not attract them. Until we recognize that factor the service
> will not grow significantly, nor do we get the new blood of technically
> oriented people to spark the new innovations so badly needed.

Here we go, again, and again, and again. "Give them the license and
they will come". But they didn't.

>
> To make matters worse, to a large degree an �old-boy network� exists in
> Amateur radio; one that grew up with �you must pass the code� concept. Like
> people everywhere �what�s good enough for me is good enough for you� is the
> mindset of many of today�s Amateurs.

Ah so! This guy is a Founding Charter Member of NCI! He, like Squiggy,
Soulful Bill and Fast Freddie, never heard of learning Morse code
because it is actually useable and in fact IS the basic means of
radiocommunications.

Without the ability to look to the
> future, or grasp the many changes occurring around them, they would keep

> practices long since useless.

Useless only if hams are unable to use them when the need arises. When
computer lines get cut or broke in an earthquake or hurricane, now THAT
is useless.

In government today we pass data digitally,
> not by CW or voice radio. In fact, there are government agencies who seek
> to do away with radio entirely.

Yep, there are some bureaucrats out there who are that stupid.
Meanwhile
"wireless" grows by leaps and bounds...

> One of my constant battles is to keep some radio capability functioning in
> government. There is a new breed of administrators who focus on the bottom
> dollar, not redundancy. Often they have no experience in communications
> failures, and their digital computer networks have not failed. They see no

> fiscal year has just begun and yesterday I was informed that there are no
> funds for communications equipment as it all went for computer systems.

Stupidity is not limited by education nor position in government. I've
seen a little of that myself.

> So, I urge the reduction of code requirement to 5 wpm at general license
> level as it is not essential skill qualifier in today�s world.

With that I agreed 100%. And said so in my comments to the FCC.

When it is
> possible to do so under international radio regulations, I further urge the
> Commission to drop the CW requirement entirely. It is not relevant to the
> year 2001 and subsequent real-world needs in communications.

Lets see if I've got this - he says that many governmental officials
want to dump radio completely, therefore the most basic

radiocommunications mode, which has been successfully used worldwide for
over a hundred years is simply no longer applicible (it must be assumed
that his statement covers all circumstances)kin the world today just
because there exist computer networks and high speed digital
communications systems. Right. That makes about as much sense as saying
that since there are Concords flying there is no longer any need for a
DC3 anywhere for any reason.

> I urge the Commission to adopt a requirement of computer ability, at least
> at the general level.

I agree.

Knowledge of technical digital information is not
> important.

Not so fast. The basic knowledge level is overlooked only at risk of
losing our status as what the FCC calls a "fundamentally technical
service".

There may be those who will assert that test should include
> questions on Amtor, Pactor, Clover or such. The problem there, however, is
> that such modes are already out-of-date. To lock the testing into them is
> already a decade behind the times. What we need is young minds open to new
> possibilities, not old minds locked in decades old minsets. There are
> enough computer specialist around that its� easy to find them and they don�t
> need Amateur licensees to fix technical problems. In fact, it is their
> interest in the technical aspect of computers that have draws them away from
> Amateur radio.

So eliminating knowledge requirements will win them over. Right.

That's where the commercial/governmental demand is, and where we use it far less than could ever justify keeping all of it. You can expect losses up there. It's as good as done, AFAIC.

>

Stick it Lenny, 90% or more HF ham emergency comms are successfully handled with ssb, a bunch is with RTTY and cw only comes into play when all else fails. Which has happened only on rare occasions but it has happened. The only name of the game in local neighboorhood emergency comms is 2m FM. Whatta blowhard.

Well, it makes sense and if it happens, I am sure they'll find somewhere else to host it. Shoot, maybe they'll find someplace that has air conditioning when it is hot and heat when it's cold. Hara has neither. I would like to see it moved.

>>Don't sweat some of these diehard CW fans, Rob. They have
>>to "prove" (by any means possible regardless of ethics,
>>morals, or logic) that OOK CW mode is superior, more
>>useful, or divinely better than any other amateur mode in
>>order to substantiate their rank, status, and position in USA
>>amateur radio that came about through that skill.

Rob, whatever you do, PLEASE do not allow yourself to be lulled by some "enlightened muse" that Lennie tries to portray.

First of all, Lennie's assertions of ""superiority" by Amateurs is absolutely ludicrous. Lennie himself will post and re-post ad-nauseum his own "CV" in order to "impress" people with his OWN "rank, status, priviledge", and then as soon as an Amatuer Radio Operator even alludes to some skill or knowledge, he is assailing them as "braggerts".

This is especially true in any knowledge or skill he does not possess. Of course Morse Code is the most visible of that, but it's not the only source of contention for Lennie. He continues to this day to try and insist that his experience as a "professional" exceeds that of and "amateur".   Inside the box, this may be true, however "ham" radio is NOT "professional" radio, and the PRACTICE of radio TECHNIQUES and programs are NOT the same. Here is where Lennie fails.

Secondly, Lennie denies, even vehemenetly refuses, to become licensed in the Amatuer Service himself, insisting that most of us are "Nazi", "jacbooted thugs" or "brownshirts", but will then state that he is doing what he does "for the betterment of the avocation".

He does nothing of the sort.

And why would someone who insists that an entire subset of society is akin to Nazis spend YEARS in various newsgroups, almost EXCLUSIVELY related TO Amatuer Radio...?!?! Please go back through old USENET archives and find Lennie in any one of his many personalities..."NoCWTest", "Lenof21", "Lenover21", "AveryFine" among others.

I have found archives going back to 1995 just on his AOL ISP. I know there are others. Seems to me he is pretty obsessed with telling Hams how we SHOULD be doing things, yet he is not willing to invest anything in it himself.

To be sure, Lennie knows the inside of the box. Lennie was an electronics technician, and at one point had some engineering experience. Despite a 40+ career in RF technology, however, it seems his only formal published works was in a long-since-failed ham radio magazine.

>>Ergo, whatever They have done in Their locality is better, stronger,
>>more robust, more resistant than any of the public safety
>>or public communications.

More arrogance, Rob. Lennie insists that since California can afford to implement a massive "professional" disaster relief communications system, then "OBVIOUSLY" all localities can do this.

Furthermore, Lennie insists that Hams have little or no impact on disaster relief or emergency communications anywhere, yet on-going media sources (and NOT just from Amatuer magazines) proves this to be false.

No one here, myself included, has EVER stated that an AMATEUR radio net, REGARDLESS of the mode, was "stronger" or "more robust" than that of ANY public safety service.

These assertions are "extrapolations" that Lennie has drawn from comments made that DID state that Amatuer nets are STILL necessary, viable and embraced by various states and communities as back-ups to the governmental services or to fill in when failures occur.

Despite the arrival of the 21st century, holes STILL exist in the radiocommunications infrastructure. And even where that infrastructure IS "robust", Mother Nature has a real bad habit of taking the works of Man and laying waste to them in short order.

Recent weather disasters in the United States has proven this true. One F4 tornado can clean a swathe of several miles of cell towers, repeaters and other communications assets. It is, therefore, the ability of the Radio Amateur with his/her mobile and or portable stations to enter the disaster area and set up even primitive services where we "shine".

And we are not alone. Recent earthquake disasters in Turkey and India have again borne out the contention that private citizens with portable communications assets are often the ONLY assets available, not only in the United States, but abroad.

Lennie asserts this is not true, however every major news media have recently reported on those very same facts.

When it comes to anything that Lennie has to say, Rob, it's "Caveat Emptor...Let The Buyer Beware"......

Seems to me, even if there were full-time radio operators, they
would today be using the satellite system for communications using
a modulation system other than OOK/Morse. In this modern day and
age, HF/CW is simply not the best choice.

Hello... I'm a creep - and an idiot - but too lazy to stalk anyone.
Besides all that, I'm not in Chicago, but NYS. Regardless,
congratulations on your Technician license and commendations on the
ambition and desire to upgrade. I wish you the best of luck and hope
that you'll find yourself an appropriate Elmer.

Sure, there's always a better, more modern and efficient (from some viewpoints)
way of doing most anything - invariably with its own set of
shortcomings, many of which were/are not present in older, less
sophistcated systems. The driving force
is economics. The cheapest system that provides acceptable results will
be the one that is adopted.

Nope, it means you're in line to follow Larry.

"Acceptable results" being the key concept. When one can get acceptable
results for less money, that is a good thing. Why pay more than you have
to for the same acceptable result?

If the Titanic and California had had the present day satellite system
in place, many more lives would have been saved by a system that, unlike
CW operators, never sleeps.

Reality check, Jeffie! Why would anyone do that?

Far more likely than your "bootlegging" scenario, the fellow is either:

1) Sending his call inexpertly, so it sounds like "KH6O", or
2) Being copied inexpertly, or
3) All the above.

If you know his 10-10 number, send it in to Ten-ten International and ask who has that number. My guess is that it belongs to someone with a call like K5BO, KH6MT, KH6TM, KS6O, or similar.

Is the number 65840?

It belongs to KH6MT.

Now don't you feel silly with your "bootlegging" conspiracy rant?

Robbie my boy, you ain't getting it. There are two kinds of emergency situations hams handle: The first is the ham finding himself in the middle of an awshit and getting immediate help by whatever means are at his command. Some repeater, his cellphone, whatever. Occasionally those become regional like ice storms, etc. Beyond that cometh the wide-scale natural disasters in far off places where hams get involved in handling all the great heaps of, typically, Red Cross administrative comms and health & welfare traffic sometimes for days on end following the event. Usually several times a year.
>

So yes Robbie, there are times when hams shoot skip to run long-haul disaster relief traffic bwtween the U.S. and other countries which allow third party handling. When the lights go out in Costa Rica it's a 1700 Km shoot to Miami. You might have noticed that we tend to do

```
things on a bigger scale down here in the lower 48 . . .

>I'm sure (no, make that certain) that you think telegraphy is the
>primest of the prime qualities in radio...in the 1950s or in the 2000s.

My observations had nothing to do with telegraphy.

I simply observed that the record shows that:

1) The no-HF/minimal-HF amateur license classes (Tech, Tech+, Novice) have
lost about 23,000 people since last April.

2) The full-HF license classes (General, Advanced, Extra) have gained about
28,000 during the same time period.

73, Hans, K0HB

> Is the number 65840?

No.

> It belongs to KH6MT.

The latest QSL card was received from KP4XA in PR; the contact he had with "KH6O" was on 10m SSB. So you're accusing Terry, KH6MT, in FL, of bootlegging my name and call on SSB. You're opening yourself up to a defamation of character lawsuit by him, Hans.

> Now don't you feel silly with your "bootlegging" conspiracy rant?

Whatever...

73, Jeff KH6O

I am fortunate to have access to the internet via a number of
different means.

Is that a problem for you?

Go soak your fat head.

Hans

No, smacko, the lights going out in Newfie country would not usually
warrant an international Red Cross or a UN or a U.S. ham radio
respose. But if some natural disaster pops up there and kills bunches
of people it might hapen if Ottowa can't cut the mustard and hollers
for international help to bail the Newfies out.
>
In some uncounted number of instances going back decades ham radio has
been the only means left for communications with the "outside world"
after a major disaster and it's done on HF. Very few of those comms
involve actual life & death comms which can obviously only be handled
by personnel near the scene. Nobody in their right minds will try to
summon paramedics on 40m cw (although that stunt has been done, too).
>
It's called long-haul disaster relief communications. If you can't do
4,000 kMs in your own country you're not much of an asset in the big
picture. But keep yer HT batteries charged, ya just never know . . .

For what it is worth, how difficult is it to hook up a computer and let the machine send and receive the code? I doubt most bootleggers would do this since it might entail just a bit of work; regardless, the question remains - how would anyone know that the other individual can or cannot send or receive CW? Computers make this relatively painless.

A simple solution might be to change the testing. Everyone gets a piece of paper and a pencil. They sign their name and put the date on the paper. After the papers are collected, the VEs simply check drivers licenses and see if the names were spelled properly. 50 points for the proper spelling of your own name and 50 points for getting the date right. 50% would be a passing score. That would be the general. For the extra, you have to spell the name of the city, town, or village you reside in. Correctly guessing the answer counts. Passing would require two out of three correct answers (name, date, location). Extra classes could apply for and obtain 2X3 calls, others would be issued either 3X3 or 3X4 calls.

Check out the Hamvention FAQ page to find the answer:
http://www.hamvention.org/faq.html
It has a couple more years at Hara.

Allen

> 2) The full-HF license classes (General, Advanced, Extra) have gained about
> 28,000 during the same time period.

For period March 2000 to Dec 2000.

A. The full-HF license classes (General, Advanced, Extra) gained 27,628.

B. The token-HF license classes (Tech plus, Novice) dropped 38,802.

C. The all HF license classes dropped 11,174.

D. The VHF/UHF only class gained 14,577.

E. All licenses classes gained 3,403.

The effect of Tech Plus class being renewed as Tech will not
be seen until 2001.   You will see the VHF/UHF class gain
jump up to 20,000 by April 2001. It is estimated the Tech Plus
renewal account for about 5,000 of the gain.

It is know that less half of eligible amateurs renewed their
license at the end of the ten year term.

I leave you to draw your conclusions on the meaning of these trend.

>

Class C is mobile. I was talking about a fixed station, where everything has to be set up and taken down. I've done that sort of thing several times, and it wasn't a QRP operation, either. Best I ever did was 640 QSOs - 629 HF CW and 11 VHF phone. Pretty good for a homebrew transceiver made from recycled parts.

>and last year was with vo1aa in nfld ...

The group I was with last year used my call. We ran one full time CW station, three full time voice stations and one part cw/part phone station. There were far more phone ops and loggers than CW ops. But the CW folks made 558 QSOs and the phone folks made 393 QSOs. All stations used comparable equipment.

There's a lot more to actually putting up a real live antenna than block diagrams and multiple choice Q & A.

making a dipole is basic ... cut two 1/4 waves ... there we go ... a dipole
...

i have no idea what we logged last year ... albeit cw got more points (since
multiplier was 2) but we certainly scored an equal number of qso's on either

as for my mobile ... well ya ... its basically just a go ahead and operate
... but getting a mobile that works nice is hard enough

That's because we can send CW with our right hands and drink beer
with our left hands. It's hard to talk and drink.

IMO, it's a no brainer to assume that there are magnitudes more voice
mode bootleggers than CW bootleggers - although I did bootleg CW in
between passing the Novice exam and receiving my license in the mail.
I came pretty close to guessing my new call.

The Titanic episode directly caused changes to radiotelegraph
operations such that there was never again a time when such an incident
could happen. New procedures and systems such as the Autoalarm system
were put into service. If Autoalarm had been in use the night the
Titanac sank Californian would have been alerted and probably saved most
of the lives that were lost - even though Californian's radio op was not
on duty.

Ands OF COURSE the answer to all the ills of the ARS is to completely
drop all code testing NOW. Right. As if.

And you're still full of stinky stuff. The ARS is loaded with

clandestine
freebanders -including you, if anyone can believe what you have said.
Yeah, I know, you say when a freeebander gets a ham license he is no
longer a freebander. That's not all youv'e said that is 100% wrong.
 CW will be used as long as there a few OTs who still know how to use
it. When they're gone, CW is essentially gone as a useful communications
tool.
 When there is no longer any effective difference between hams and
freebanders/CBers, then there can be no rational nor effective defense
of any part of our spectrum. You are helping to bring that sky down as
much as any (other) rabid codehater.

What is the question number? Not a well worded question. The "gentlemen's agreement' are also know as "band plans", which are not a FCC regulations. These plans are developed to reduce interference among operators. A amateur radio license requires that you accept interference and to not cause interference. So indirectly, bandplans are an operating requirement. Operators use 50.100 to 50.150mhz for international contacts, which is very very weak signal work.   I believe that segment is always reserved for international DX, not just during contests.

I show the international 6m DX bandplan as 50.100 to 50.125, with the American calling frequency to be 50.125. There was a movement to increase the DX segment by moving the American calling up to 50.200.

Band plans are reported in ARRL's QST magazine. Look for "The World Above 50mhz" written by Emil Pocock, W3EP. You can also pick up free bandplan charts at the hamfests.

These questions are the frequency memorization questions. They other similar questions on the tests. The band plans are extensive, and you can not remember the entire plan, so memorize the question answers. Good luck.

There was practical value in dropping the General test to 5wpm and that
was noted in my comments. The only practical reason for dumping 20wpmfor
Extra was to allow you and a number of other codebashers to get a novice
grade Extra.

I see it a little differently. Back during the Reagan years, the FCC
was being nagged to open up bands for paid customers. Their only
defense is that the bands are being used already. The Congressional Red
Army (wanting all that commercial money) looked at the books and says

"where are they?" and the FCC decided to boost the number of hams overall (thus the no-code Tech) AND boost the number on HF (thus Novice Enhancements).

Those same middle-managers are still at FCC, and they see that ham radio is almost trouble-free, compared to commercial radio enforcement.

Consider the following common scenario. Someone becomes a ham, buys a radio, and puts up an antenna on the back of his car. That is so much fun, he puts a rig in his apartment, using a mag-mount on the balcony. Then he gets into packet, and discovers that he can stick a digipeater on the top of the skyscraper where he works for a couple of day's pay. A couple of months later, he moves to the suburbs and decides that he wants HF privs, so he goes down and passes the upgrade exam. Then he puts up a mast with a cheap, used-from-the-hamfest antenna. That works okay, but he then goes from 100W to 500W, and wants a better antenna system, which consists of a 40-foot tower and a really good antenna. After a few weeks, he climbs the tower again to mount his VHF antenna, a UHF antenna and to string a wire for his daughter's SWL radio.

Total FCC investment in the entire package: Accepting 1 certification that he has passed the Tech, another for the General, and a license for the digipeater, all of which take a total of 5 minutes' work.

The same package for a commercial user? Two user licenses (each requiring coordination for EACH frequency being used), 7 footprint maps, and about 50 man-hours out of the Commission budget, to take up a very small chunk of spectrum. If there is any complaint about interference, a challenge to allocation, or addition of more radios (when cars begin to breed), the resource drain goes up in a big hurry.

Hams are big on the "self-policing" idea, meaning that there are thousands of frequencies that the Feds don't have to monitor. Commercials users demand INSTANT control of any problem, and that's expensive, too.

Trust me, they would rather have us than the commercial guys, and that's a large part of the reason that they have made it easier to get a license, made the license longer, and reduced the code.

Dear "Train",

The first fallicy to your post is exeplified in the fact that you do not sign your REAL name. This is because you are engaged in an illegal act and you cannot do so with out bringing law enforcement down on your head and you know it.

That should say enough, but we shall comment anyway.....

>I have been in the CB tech repair business for years and have seen >nothing but growth and expansion among freeband people. There is no >sign this will soon abate, so it is high time SOME in the ham radio >service face the facts.

Here's some facts for you:

(1) This activity is illegal. Both by doemstic law and international treaty. That it is there does not make it any less illegal.

(2) The FCC has had quite a bit to say about criminal activity on these "bands", and I imagine it won't be long before they are at YOUR front door.

>Fact: hams should not be concerned at all about this issue. What goes >on within 27-28 Mhz is none of their business.

Fact: What goes on here IS my business. The radio spectrum is regulated (in the United States) by the FCC and numerous other radio services need this spectrum too. It is every citizen's business, regardless of licensure.

Secondly, you and other sloths of the airwaves don't know when to stay put. The "freeband" is now quite prolific in the lower part of 10 meters, ergo you and your like ARE my concern.

>Fact: most of the squawking is done by rule-obessed no-lifes who can't >stand to see other people enjoying themselves.

Fact: This is not about letting people "enjoy" themselves. It's about having something I worked hard to obtain being trashed by thieves who feel "at liberty" top do as they will, irrespective of what interference they may induce. I don't tolerate vandals who trash my property, and I don't have to tolerate lowlifes such as yourself.

>Fact: high-quality SSB export radios like the Emperor, Ranger, Galaxy, >and

others that go from 25 Mhz to 32 MHz are being marketed by big >companies because the FCC has admitted it can't be bothered to >enforce trivial rules. If it is OK by the FCC then it is no one's business >to squawk, ESPECIALLY hams who's frequencies are not part of the >equation.

Fact: Ham frequenceis ARE "a part of the equation" in as much as your freeband buddies are settling there, too.

But as for the FCC allegedly saying "it's OK", then you had better start reading a bit more of FCC enforcement actions lately. If you are selling these radios, modifying or promoting them, you are subject to search, seizure and arrest. I hope you get to "enjoy" all three.

>Fact: the same goes for RF power amps. Freebanders can responsibly >run power and are capable of using it wisely.

There is no "fact" to this. It's illegal. Period. I don't care if you have the signal strength of VOA and the signal purity of the Voice of God himself.

>Fact: many families out food on the table from businesses that operate >to serve freebanders. There are much worse crimes to go after than >those who ignore trivial and outmoded FCC rules.

Then I suggest they find something LEGAL to do. If they go hungry because you get busted, it's YOUR fault, Trainy. Not mine...Not any ham radio operators...Not the FCC's...Not anyone else...YOUR fault.

>All the bitching an moaning needs to stop and some mutual RESPECT >shown between hams and freebanders.

I have no more "repect" for freebanders than I do for the purveyors of "recreational pharmeceuticals".

You and your like are breaking the law. There are some very valid reasons for having these regulations in place. You are making it difficult for the LEGAL users of this spectrum to use it as they are allowed.

And by the way, "hams" are not the only legal users in this part of the spectrum. You do not realize the trouble and frustration you and your thieving friends cause.

I hope you wind up in jail, your "wares" confiscated and a criminal record established, "Train". How will your family feel about your "job" then? If you are so concerned about the "food on the table" for them, maybe you should think about THEM first, instead of some childish rationaliation about why YOUR form of lawbreaking is "ok".

"An America Not Preapred For War In Peacetime Will Not Know Peace In Any Time."

I agree completely. Passing the exams is a worthy accomplishment, but it shouldn't be taken too far. Most certainly a person should never base his judgment of the value of ham radio on what piece of paper he has in his pocket (the license). Nor should his judgment of

the value of another person be based on what piece of paper that
person has in his pocket.

Well, he isn't the only one who bought the Dick Bash books . . .

Face it, the whole 20 WPM thing is just modulation masturbation, with all those old guys sitting there fingering their squeeze keys and blipping off.

What "forgery?"  The only "crime" there was not using
conventional newsgroup formatting; i.e., the right arrow [ > ]
to indicate a quote from a previous message.

The cynical-chic commentary of McCollum is difficult to
forge, meandering into all sorts of "analogies" either in
error or not being on the subject of radio.

In article <3ACFF158.186BE591@ix.netcom.com>, Robert Casey <wa2ise@ix.netcom.com> writes:

>The FCC does provide for Technician Plus previous-license indicator
>as the "P" in that data field. That statement comes from the FCC's
>Memorandum Opinion and Order 01-108, 6 April 2001, page 5 (.PDF
>file available on ARRL website). Incidentally, that same MO&O
>states (page 18, item 48) that all further 98-143 commentary and
>reconsiderations are "Hereby Terminated." :-)

The above paragraph is a quote from my posting and did not originate with Mr. Casey.

>That includes a WAD petition for reconsideration to restore 20wpm
>for extras. FCC says no, it's gonna stay at 5wpm.

It takes in several RMs, dismisses most of them, and really only includes statements about the state/fate of Technician Plus class licensees. A couple of items in the MO&O make a few changes in English of the existing regulations.

>see
>http://hraunfoss.fcc.gov:8888/edocs_public/attachmatch/FCC-01-108A1.txt
>for the gory legalistic details.

That goes through the Search from FCC home page, to EDOCS and its rather formidable fill-in search criteria page, depending on one's ISP. Result of a successful search offers three choices of the same document. PDF is easier to read than the TXT version and the Adobe Reader is free. So is the MS Word Reader, many FCC documents are in Word format.

=====

A small black helicopter can be heard. Except for a very major R&O such as 99-412, FCC documents concerning amateur radio appear FIRST via the ARRL website. While that is a nice service for ARRL members and a self-boost inducement to join, the FCC serves ALL citizens, including 3/4ths of all US amateur licensees who are not ARRL members. Documents such as FCC 01-108 appear only in FCC Daily Notices...they aren't in the Headlines of the Wireless Telecommunications Bureau nor on the WTB's sub-page for Amateur Radio (that page still carrying the RMs which were dismissed by 01-108 as of Sunday, 8 April).

The major task of the FCC is regulating communications. It would seem reasonable that the FCC should afford the citizen the same timely notice of new regulatory change information as a special interest group such as the ARRL.

Maritime service no longer uses CW. What years are you talking about?

> >Are you proficient in medical first aid, CPR, and AED use?
>
> Advanced first aid and CPR.

Excellent. While radio or wire communications (including cell phones) are important, CPR is a skill that can save lives. Technological and operational changes have made Morse code exam requirement unnecessary , and not in conformity with 5 USC706(2)(A). I submit that first aid and CPR proficiency is equally or more important then Morse code proficiency.

It long past time for the FCC to: vote for deletion of ITU rule S25.5; take exception to the rule if WRC 2003 does not delete it; and delete 47 CFR 97.503(a). It is the 21st century, let move on.

Un-hunh. What I see is a dipshit Nocode tech with a question pool GROL acting like he acrually amounts to something besides a whining child. And a besotted crossdressing "genuis" engineer searching for his "one-hit $hit" who think they have a clue.

On Friday (4/6/1) the FCC released an MO&R which dismissed/denied all of the petitions (QCWA, ARRL, WAD, Teaze, Speroni, and more) relative to restructuring

Regarding the Speroni petition (more CW bandwidth for Novices) which I thought was a no-brainer and would easily be adopted, there was a particularly telling comment:

> "Additionally, we believe that we should allow the amateur service community to reach a concensus regarding a comprehensive restructuring of operating privileges for all licensees BEFORE WE EXPEND OUR RESOURCES in a proceeding addressing this matter."

In other words, "We don't have time to listen to your arguments -- get your (stuff) together in one sock before you bother us again."

Note also that in some areas, the "local bandplan" may deviate from the
national one. However, such will usually be noted on some local organization's
literature (or web site).

To my read, it approves the tech plus issue resolution, and also
includes extensive statements about the stuff denied.

My ISP sends my browser directly to the txt file without passing thru
the search page, which is quite formidable. I chose the txt file as one
can cut and paste from it, and I don't have word.

And in their typical shortsightedness, a current "Technician" that also has an "N" in the previous license indicator is ALSO a "tech plus" - having upgraded from Novice instead of "downgraded" from "tech plus." ...But of course, our government is not smart enough to realize that.

Summary: Therefore, who do we KNOW is a "tech plus" when it says Technician?
1) Those who have a "P" as their prior license class.
2) Those who have an "N" as their prior license class.
3) Those who were licensed before February 14, 1991.(*)

(*) Really, due to FCC processing delays back in 1991, there is another, later date in 1991 that should be used (I think it's in April). Whatever that date was, marked when the first POST-02/14/91 test was processed. This is similar to using April 19, 2000 instead of the magic April 15, 2000 date as the periodic border....

Thank you, Steve. Having long since killfiled Lennie, I would not
otherwise get to see the comment.

1. I do not deny my reply.

2. The reply from twistedhed is a Leland Scott forgery.

3. The original from Train may well be.

Dick N�BK

Too bad you have gone the long way around the bend Doug. Not only are you no longer regarded seriously, but you managed to shoot any allies you had, or could have had, in the back. So if that is what you tried to do, then you succeeded well. Your on your own Doug.

If anyone has any questions about who posted what a quick check of the message headers is all that is needed.

I used to be a tech +, but I decided it would be best to upgrade
partly to avoid this issue.  I'd advise such tech +'s to study up
and go for the general, or even extra (that's what I did).  Also,
HF is fun!

If you have a tech + dating back from before 1987 IIRC, assuming
you kept your old expired copy of your license when you renewed,
you can cash it in for a general without taking anymore tests.  I imagine
everyone who could probably already did by now, though.

My point is that an upgrade will lock your code credit in.

I said in my WT Docket #98-143 comment: "The law requires that the
Commission hear the petition or to state valid legal grounds for rejection.
A lack of consensus of the Amateur Radio community is not a valid legal
reason. The FCC is required to decide petitions in the public interest, not
by consensus of the licensees. There was no legal justification for the FCC
to rely on the ARRL and QCWA positions; it was the FCC duty to make its own
determination of the public interest. " This comment was made in regards to
FCC staff member John Johnson's rejection of Jim Willis' petition.

Still applies today. I do agree with your conclusion; however, as we both
know, it very hard, if not impossible, for this group to reach a consensus.

When a consensus can not be found it is the job of the Commissioners to lead
way. It is their responsibility to make a decision.

I undestand it as being "We at the FCC don't see any reason to change
things with respect to this at this time, as we don't see a consensus from
the community (hams) for a specific change to be done". Besides, I
didn't think there were that many novices left anymore.

It's not for the FCC to make arbitrary changes for the hell of it anyway.

  Separate license for the digipeater is no longer required
  unless it's a "club" station.

>The same package for a commercial user? Two user licenses (each
>requiring coordination for EACH frequency being used), 7 footprint maps,
>and about 50 man-hours out of the Commission budget, to take up a very
>small chunk of spectrum.

All done by the licensee, his consultant, and the private sector frequency coordinator. The FCC no longer does the drudge work. If the coordinator approves the application (submitted electronically by the applicant to the coordinator and forwarded by the coordinator to the FCC, again electronically) the FCC issues the license essentially untouched by human brain unless there is a problem. Even then the coordinator has the primary responsibility to resolve issuance problems and disputes.

I once appealed to the FCC when I felt that the coordinator was putting up ureasonable documentation barriers for my client to meet when the client applied to set up a system to replace someone else's abandoned system. Their reply was "sorry, bub, the coordinator has the final word nowadays".

>If there is any complaint about interference,
>a challenge to allocation, or addition of more radios (when cars begin
>to breed), the resource drain goes up in a big hurry.

Done by the coordinator under a MOU with the FCC.

>
>Hams are big on the "self-policing" idea, meaning that there are
>thousands of frequencies that the Feds don't have to monitor.
>Commercials users demand INSTANT control of any problem, and that's

Doesn't surprise me. All it takes to renew is Form 605 and a stamped envelope.

>Like I should talk. I was off the
>bands for most of a quarter century, all I did during that hiatus was
>renew my ticket. It's a nobrainer. Thankew k3nl for remiding me that
>my ticket was 18 months past it's expiration date.

omigawd - I will thank him next time I work him or see him. But I can understand how it happens. Ten years is a long time, and it's easy to lose track of when the license actually runs out. Plus the renewal window is only 90 days wide out of 10 years (3 months out of 120).

> Renewing is a
>helluva easier than taking the freaking tests again,

You'd have no trouble at all. Biggest headache is getting to a VE session. Plus taking all the guff from the locals about it.

>never mind,
>certainly in my case, losing my beloved antique 1x2 if I didn't renew.

Unless somebody got it, you could get it back. For a price.

>In retrospect there's no logical reason to expect the nocodes would
>not follow suit for similar reasons PCTA rants, assumptions and hopes

>aside.

You know better than I that this whole
codetest/restructuring/ham-radio-is-allegedly-dying mess is a nonissue to 99%
of us active hams. 680,000 hams, 2,200 comments - sez it all.
>>
>What this reality does wrt to this newgroup is to render brawls based

If for no other reason than it takes years for trends to become apparent.
>>
>Get a signal on the band/mode or lose it, the rest is bullshit.

Exactly.

My station is back together. Bench and shack tables remodeled, new shelves,
better lighting and power, less clutter. Sunspot numbers are unreal. Tally ho!

Hans,

Your comments are right on the money. I would add the following interpretations of that paragraph, though:

"We gave you hams an extra-long comment period on the restructuring NPRM to make your cases. If you didn't convince us then, you're not gonna convince us now."

"We have very limited resources here at the FCC. Last thing we want is more admin work. More license classes? More complex test procedures? Further review of this whole mess? Forget it!"

"We made our ruling. To change it now would be to admit we were wrong. Government agencies just don't do that."

It really is up to us. Just like it always has been.

Absolutely correct - thanks for the reminder.

My 1993 Callbook lists license classes "N", "T", "G", "A", and "E".

Why not write them a nice long letter, Larry. Be certain to include
material about what their duty is. It would be great if you could throw
in some of your best pseudo-legal stuff.

Maybe they'll post it next to the water cooler with some of Len
Anderson's gems.

Only because Reily Hollingsworth has successfully cleaned up 14.313 and much of 75 Meters. It's now too hot to conduct this kind of stuff on ham radio as the FCC DF equipment (coupled with the DSCS satelite system) can pinpoint an RF emitter from DC to daylight anywhere on the planet in 5 seconds. Therefore, all the great old QRM'ers we have come to know and love from 14.313 are now down here on the newsgroups. Kind of a shame really as it was always more spontaneous in it's comedic value when it was on the air instead of having to read it in cyberspace. I sorta miss 14.313 really, it was ham radio's answer to Comedy Central. (if anyone can say "hello" to "bathroom-man" for me, I would appreciate it! He helped me diagnose and fix my malfunctioning toilet on 14.313 a few years ago. He may have been an un-ID'd QRM'er but he has sure got to me a master plumber in real life. He actually diagnosed the problem on the air right on the nose having never seen my commode) Stuff like this you miss from the .313 of the olden days, along with the nightly Mike and Judy show which was no doubt the most popular soap opera on 20 for many years...

Which likely means no further changes in the forseeable future, given
the chances of getting anything remotely approaching a 'concensus' is
about as remote as a manned outpost on Mars.

A freebander who converts over to legal hamming after he gets a ham license
is no longer a freebander, Dick. What is it about that true statement that
you don't understand?

Here is what is happening. The government can do what ever it wants. It is

slowly doing that. The people want one thing or tell the government one thing
and the government does what ever it wants. Even if the government sides with
a minority view they lose if the majority wants something else. The bottom
line is all lose if the government goes with the minority view. Georgia is a
great example of this! So we will probably lose ham radio in time. I would
gladly trade 220 MHz for 27 MHZ and I would gladly trade 2 meters for 24
through 30 MHz
               Oris

But, but, but Dick, you said:

"... as for myself, I like the present."

If you really liked the present, would you still be bitching, moaning, and whining?

Sounds like a case of remembering all good if fact there was no good and your in
denial! Good
work Riley Holingsworth.   Now if we could have the FCC get Darrel Beard so all
this illeagal
freeband activity can stop in Madison, Clark, Oconee, Franklin, Ebert, and Banks
counties here
in the great state of GA.

Neither am I.

>There should be some nulls off the ends of the dipole.

That all depends on things like ground conductivity, system balance, other
conductors in the area, etc., etc. That's why I said "real world" - all of that
stuff gets into the act whether we want it to or not.

>I want to see the vertical beat the dipole in *any* direction and/or
>at *any* take-off-angle.

Ahhh - good point. It probably won't be better unless we get conditons of very
low takeoff angle, and the vertical has a very good ground system. How many
radials and how long?
>
>Modeling indicates that the vertical should be about 20dB better
>than the dipole off the ends of the dipole at a take-off-angle

I wouldn't count on it unless you have really good ground conductivity and
lotsa radials.

You live a charmed life, Cecil. The classic "snake in the grass". Glad it was
the harmless kind. How's your hand now?

Reminds me of the time I bent down to pick up a piece of 37 conductor cable
(diameter: about 3 inches) and when my hand was about six inches from the
"cable" it slithered away into the weeds...

Personally, I don't trust any animal that doesn't have shoulders.

You should be. I was proud when I got mine (1970).
>
>Now the FCC has taken my Amateur Extra license and made it an almost
>worthless piece of paper.

Your accomplishment is the same as it ever was.

>  It now only takes one 50 question test to get
```

>from General to Extra Class, and there is no code test whatsoever.

True. But the trend towards easing the requirements has been going on for 25+ years. For example, there used to be a requirement that you have at least a General for two years before they'd even let you try for the Extra. That was reduced to a year, then eliminated entirely. The question pools used to be secret - the tests used to be only given at FCC offices - you used to have to send 20 wpm to the satisfaction of the examiner (with a straight key, unless you provided a bug or paddles). No CSCEs, and a 30 day wait to retest if you failed. All gone, one by one.
>
>Forget the "code" versus "no code" debate. Shouldn't it be take the same

>
Here's an analogy:

In running, a "marathon" is currently defined as a run of 26.22 miles. Almost anyone who can run a mile can complete a marathon if they are willing to do the training. (I know - I've done two of them). But it's not easy. Being able to claim the title "marathon runner" is quite an accomplishment.

Suppose the marathon distance was refined as 5 miles. Lots more people would be able to call themselves "marathon runners" if that happened. Running 5 miles is quite an accomplishment, but it's not the same thing as 26.22. The title "marathon runner" would no longer mean the same thing.

But the accomplishment of the 26.22 mile folks would not be diminished. Only the meaning of the title changes.

I got the Extra back in 1970 mainly because I wanted all license privileges. But I didn't stop at 20 wpm or the Extra theory of 1970. Those things were the beginning, not the end.

  Sure, until he regresses backinto his "other mode". Common as grass,
unfortunately. You wouldn't know anything aboujt that, would you?

 What is it about that true statement that
> you don't understand?

  Only that it, like so many of your "true statements" is untrue.

To Whom It May Concern:

As far as we know Leland Scott has done nothing except to occasionally speak out in disapproval of illegal CB operation in this public forum. He is not now, and has not ever participated in organized Anti-KeyClown or TwistedhedTweakers actions.

To the best of our knowledge, he has posted nothing under any screen name except his own. We who opose *Twistedhed respect Leland for his views and wish to go on record as stating that he has no ties to us or any other AntiKeyclown personnel. We are soley responsible for all tweaking, baiting, and embarassing of Twistedhed.

Mr. Twistedhed has, as usual, succumbed to his own half-baked and deluded theories about who is doing what to whom. He has barked up many trees, all of them wrong. It has been a pitiable, laughable spectacle, and one that we have enjoyed immensely.

But now the time has come for Twisted to apologize to Leland Scott. Following this, we advise him to spare himself further shame and embarassment and leave this newsgroup for good.

Sincerely,

Anti-Twistedhed Group
http://www.twistedhed_pulls_his_peepee.com

*Twistedhed@webtv.net is a notorious freebander and CB outlaw who frequently posts his drivel in rec.radio.cb and other forums.

I am not arguing for or against any request in FCC01-108.  A FCC decision on
a matter that its is condition on an amateur radio community consensus is an
arbitrary decision to make no decision.  While I understand the FCC desire
to close WT Docket #98-143, it should be apparent that the FCC has not
completed it work.

Larry

What is there to respect about illegal operation? If you want respect, either operate on the 40 allocated cb channels using power within the legal limit for cb with equipment certified for the cb band, or get a ham license and operate legally on the ham bands. You don't get respect until you do something that deserves respect.

I didn't "get in your case", Hans. It was a bit of ribbing. Unfortunately you didn't take it that way. A bit of childish whining on your part follows, I see. I am not surprised, in retrospect. A few weeks ago you addressed my preference to not use "eQSL", and then made a snide comment that I had responded to YOURS, and said it was a "big hairy ***** deal".

I replied that since I "knew" you I considered it a personal courtesy to respond. Of course, after your snide comment on the matter, I really didn't expect an answer to THAT, and you certainly didn't disappoint me.

It's a shame that a person of your alleged military and professional career has come to this. Too bad. You could have been a contender. Now it's just Depends.

Oh well........

No 73 for you. You'd only find a reason to insult THAT, too.

"An America Not Preapred For War In Peacetime Will Not Know Peace In Any Time."

I ask again, Dick, why is my statement not true. You agreed it was
true when you said "Sure".

The radials are elevated at about 20ft and there are presently four of
them 34ft long. I plan to add radials while taking FS measurements

until I get to an optimum level.

There was no swelling or infection. Just two teeth marks, one of which was gnawed out to create a triangular pattern with some skin missing.

"Further screw it up" implies you think it is presently screwed up.
How can you like a present that is screwed up? I am presently an Extra.
I know you don't like that. Seems you don't like the present after all.

Hello,

73 from France.

Just a question : is there some countries where the respect of the "Gentlemen's Agreement" (Band plans, in particular) is an obligation by law ?

In France we have actually a problem : some SSB guys are doing phone contacts on 30m band (around 10.125 / 10.132 and 10.148) saying that the ART (as FCC) dont say it's an obligation to respect band plans. The ART says in fact that it's a good thing to respect the IARU recommandations ...

From now some months, 30 mtrs band is becomming a CB Band with regular chat phone QSO and QRM to perturb and perhaps some cb'ers coming on to excite peoples, hi ...

So, European hams, don't believe all french amateur stations are CB'ers ;-)

It's only some small groups.
As a french ham, i apologise for the trouble done by people who forget they get 30 m band by the work of the IARU and also that their QSL come by the IARU buro's !
They also forget they are doing trouble outside France.

Can we do something against that non-respect of the Gentlemen's agreement ?
European IARU region 1 people, licensed with the CEPT/HAREC standard, can perhaps incite french administration to act for the respect of iaru recommandation ?

73,
F6AWN

to mail : remove the "no".

(sorry for my english. Hope you will understand what i wanted to explain.)

I know I can be slow sometimes, and it takes me awhile to understand some things.

Under the restructuring rules, a person who had EVER held a Novice or Tech Plus license (no matter how long expired) is given credit for 5WPM when applying for a new license.

But a person who has previously held a General, Advance, or Extra license in the past is NOT given that credit.

The ARRL petitioned the FCC to correct that obvious discrimination. The petition was denied, and the reason for denial is quoted below.

I have read the paragraph at least a dozen times, and it still doesn't "click" with me.

73, Hans, K0HB

> 17. We disagree with ARRL�s claim that this rule discriminates between examinees who hold expired and non-renewable Novice and Technician Class operator licenses and examinees who hold expired and non-renewable General, Advanced, or Amateur Extra Class operator licenses. An examinee who holds an
>
> expired and non-renewable Novice Class operator license, or an expired Technician Class operator license, may also hold a current Technician Class
>
> operator license and therefore, must be given examination element credit for
>
> examination elements passed for the license(s) held. An examinee who has only a non-renewable General, Advanced, or Amateur Extra Class operator license is not a licensee and, therefore, will have to pass or receive credit for the requisite examinations if he or she later decides to obtain another amateur operator license.

Yes, but according to the FCC's MO&O of April 6 (paragraph 9):

"Subsequent to the release of the Report and Order, the software used in the ULS was modified so that ULS will show a 'P' (for Plus) in the field designated for a licensee's former class of license when a Technician Plus Class license is renewed."

So, one should be able to make the numbers more concrete if one wishes. As of the latest public files, there were 7079 active 'T' class licenses with 'P' in the previous-operator-class field.

In the context of the MO&O, the FCC overlooked the fact that that's of little use since, as Jim says:

> Also, a ham who holds a Technician license and has
> passed Element 1 (5 wpm code) has Novice/Tech Plus HF privileges, even though
> the database simply shows "Technician" as the license class. There is no easy
> way to determine exactly how many Techs are actually Techs with HF, because the
> FCC does not keep that information in its database.

But even an expired Extra issued before 4/15/2000 is valid for the
commercial radiotelegraphy license requirement. So an expired Amateur
Extra conveys nothing in the Amateur Service but DOES in commercial
service. Somebody 'splain that one, please!

j.b@integrity.net.com (Johny B. Good) wrote in <j.b@b_good.com>:

>How much is the

>League worth right now?

I'd say a tornado going by 225 Main Street in Newington should be able to make at least $950,000 worth of improvements *minimum*.

A lawsuit would be a very good thing for the ARRL at this time. It would reveal to the Board of Directors what they should be focused on and not the things they have been focused on of late. If you did sue them you might not even have to go all the way to court. You could drop the lawsuit if the League Board of Directors would admit and agree that:

1.) Restructuring was a mistake. Ham radio is dumbed down now.

2.) Restructuring isn't producing knowledgable operators.

3.) They were wrong in proposing their restructuring proposal.

4.) That their restructuring plan was only meant to increase membership not improve ham radio.

5.) Their restructuring plan ignored the wishes of the membership.

6.) They made a mistake in not opposing the FCC restructuring plan.

7.) That they agree ham bands are now worse since April 15th 2000.

8.) That they will work to promote better licensing standards and exams.

9.) That they will stop acting like bunch blithering idiots.

10.) That they'll listen to their members and not ignore them.

If the League would agree to these I might even rejoin and start supporting them again.

I follow the logic - if there is a mis-type in the section dealing with expired/non-renewable Technician Class licenses.

My gut feeling is that they meant to say that credit is being given only for current or expired-but-renewable licenses, and that the holder of an expired-not-renewable Novice license may somehow hold a valid or expired-but-renewable Tech license, thereby conveying 5 wpm credit.

Is clear English so hard to write nowadays? The Commish' (or more accurately Johnny "Bald Eagle" Johnson) was burned severely by the attempt 25 years ago to rewrite the amateur rules in comic-book language (remember that one?) so he gave up entirely.

For what exactly could they be sued? Have they violated some law? Have they violated some written contract?

"The Bathroom Man" is far from dumb and you oughtta see where he lives. I have. Carefree Arizona is a very AFFLUENT community outside of Scottsboro. It lies between Sedona and the greater Phoenix area. Beautiful homes framed by Camelback Mountain. "The B.M." owns a major plumbing supply company out there- a business worth many millions. There's a lot of green in the bowl.

It seems obvious that they didn't understand the answer either. :-)

For months now a group of do-gooders have been invading rec.radio.cb and trying to discredit freebanders and other alternative cbers by posting trivial legalities and FCC rules. We who are serious about the CB hobby are sick and tired of this flak. We know what we do is illegal. We simply don't care. Furthermore, we have the right to do what we want WITHOUT anyone acting all high and mighty and telling us we are breaking "laws". There are differences between rules and laws. The FCC does not care about CB anymore and these do-gooders need to get this fact through their thick skulls. I am not saying exactly what action to take heh heh, but if you support our cause please do your part to stop this malicious muckraking and disrespect of our hobby.

You already kno why it isn't true. A former freebander who grabbed a
cheap and all-too-easy ham license while retaining his freebanding ways
for his usual forays outside the ham bands hasn't contributed anything
positive to the ARS.
Now tell us that rulebreakers outside the ham bands will be model
citizens inside them.

That's freakin' fact Dick. My take is that whenever the FCC decides
it's time to futz with the ham regs again they'll expect to the ARRL
to come up with some politically palatable (read: marginally
defensible) "consensus", pass cursory judgement on it and forthwith
twist the resulting R&O into something even more convenient for them.
In retrospect that's exactly what happened in this last maneuver. All
the flood of comments they got on that abominable NPRM did was to
demonstrate that we don't have our collective shit together. Which of
course gave them a ticket to ride.

  Or can the plaintiff substantiate the usual member/investor claim
  against a BOD - failure to exercise good financial judgment
  causing the value of the stock to go down.  That didn't
  happen?  No case....

Based on the original newsgroup post, you can not sue the ARRL. If you not
a member, you can not sue them, because you have no standing. If you
member, you can not sue because you are required to sue, in the name of
organization, those directors that violated there fiduciary duty.   See
below.

The FCC does not agree.

> Ham radio is dumbed down now.

Well you are live proof, but I do not think we can blame the ARRL
directors for your stupidity.

> 2.) Restructuring isn't producing knowledgable operators.

Tell that to the 30,000 operators that upgraded.

> 3.) They were wrong in proposing their restructuring proposal.

The FCC proposed the Restructuring as a part of their Biannual review.
The ARRL just filed a comment likre the rest of us.

> 4.) That their restructuring plan was only meant to increase membership
>   not improve ham radio.

Does seem to be working.

> 5.) Their restructuring plan ignored the wishes of the membership.

Yep, they did not make the procoder or nocoder happy. Can not win them all.

> 6.) They made a mistake in not opposing the FCC restructuring plan.

Yes, that should have demand an immediate end to Morse code exams.

> 7.) That they agree ham bands are now worse since April 15th 2000.

Sun spots Vince, wait it will improve.

> 8.) That they will work to promote better licensing standards and exams.

That has always been their goal.

> 9.) That they will stop acting like bunch blithering idiots.

Right Vince and you model of blithing intelligence.

> 10.) That they'll listen to their members and not ignore them.

I might be nice if you would listner to what they have been trying to tell
for last couple of years. The code test can not longer be supported and
subsidized by the government.

> If the League would agree to these I might even rejoin and start
supporting
> them again.

Are sure they would let you join?

Well Michael let me ask you some simple questions. What is more important to YOU? The personal achievement of passing the above battery of exams? Or is the little square of paper from the FCC that you want to wave under other people's noses to show how much better you are compared to them?

Nothing you accomplished, nor the skill you used to do it, changed one tiny bit when the licensing requirements changed. You can still send code at your 20 wpm speed. You still know what you did to pass the written exams. So what's your problem? Worried about your "status" as represented by that little bit of paper from the FCC? Forget it, get on the bands, and have fun. It that not why you passed those exams in the first place?

That's what I had in mind, but I haven't kept up and wasn't aware of the
"no separate" change.

> >The same package for a commercial user? Two user licenses (each

No, but they are still responsible for it being properly done and
certified. Even when someone else does the work, it's still a pain and
it still sucks up resources. I can't think of a single government
agency chief who thinks that it's properly funded for the workload.

The only reason that he likes the present is that it gives him something
to whine about. He thinks that if he does it enough, all the real
comunicators who know his true value will suddenly take him in as a
"real Extra," just because he was able to do 20 WPM and remember enough
of the answers from the Bash book.

Cecil:

First you disagree with me, then you prove my point. You really need to get together with a psychologist.

>Any citizen who meets the
>requirements, whatever they happen to be at the time, is qualified
>by definition.

Not exactly. Post April 2000 radio amateurs with a General or Extra class license are NOT as qualified as Pre- April 2000 hams of General, Advanced, or Extra class. End of story.

>One person may already be qualified. Another person
>may have to study/practice for a year. They both get the same license.
>Dedication is irrelevant. Effort is irrelevant.

The "effort" is irrelevant only to those who never made it.

>In the past, it was very difficult to qualify for a concealed weapons permit
>in Texas. Then Bush signed the concealed carry law and now it is relatively
>easy for a citizen of Texas to qualify for concealed carry. If you were
>one of the earlier concealed weapons carriers, would you feel disappointed
>that there are now lots more concealed weapons carriers? Qualifications

>simply change with time in every field (including amateur radio).

Another Cecil Moore classic apples-to-oranges comparison. Also not
worthy of any further comment.

>Incidentally, the murder rate in Texas has dropped 45% since Bush signed
>the concealed carry law.

Good. If I ever feel in danger of being murdered, I'll move to Texas, and
be safe.

Phil and the group:

We all know that the FCC never reads or even cares about the comments they
solicit in NPRM's. The whole deal is a sham from start to finish.
Memorable shams include the theft of the 220 MHz band, which garnered
something like 20,000 comments against, but only two in favor...one from the
proposed user, United Parcel Service, and the other from the equipment
manufacturer, Motorola. Of course it was passed, since the decision was
cast in stone even before the NPRM was issued. Another was the LPFM scam,
but I'll save that for another thread!

Most certainly they probably will respond to you. But I would suggest
taking the test first. It's not like its all that difficult or time
consuming. 100 multiple choice up here north of hte border.

Oh really Richard? Why don't you go and check the message headers then come back and try that comment again. Otherwise the forgeries are getting you so confused you can not tell the real from the fake anymore.

You have been spoofed Richard. You need to wise up before pointing fingers.
I know we have exchanged some comments from time to time, and don't see eye
to eye on them, but this is a friendly tap on the shoulder to let you know
somebody is jerking your chain, and your are eating it up.

You want to make a bet Richard. You sure you are not trying to blame me because you dislike Tech Class Hams who don't care about CW? We went round the block on this one a few weeks back, remember? I guess not. Your anger is getting the better part of your judgment lately it seems.

Exactly what rules do you think they would break? They have their choice
of modes, frequencies, and power. It is analogous to someone driving
without a driver's license for awhile and then getting a license.

Larry Roll K3LT wrote:
> Post April 2000 radio amateurs with a General or Extra
> class license are NOT as qualified as Pre- April 2000 hams of General,

> Advanced, or Extra class.

We all know you have to delude yourself into believing that to
prop up your self-esteem, Larry, but the truth is all people holding
the same license class are equally qualified for that license class.
If they were not qualified, they wouldn't hold the license. The best
thing you can say is that you are over qualified for your license
class. That is as it should be for someone licensed as long as you.

> The "effort" is irrelevant only to those who never made it.

My Advanced exam was absolutely effortless. I stumbled in drunk and
stumbled out an Advanced ham. The only effort I expended toward my
Extra license was driving through a thunderstorm.

> Another Cecil Moore classic apples-to-oranges comparison. Also not
> worthy of any further comment.

Hee, hee, I thought a guns example would git ya.

"Can you"...maybe. Are you ALLOWED to? Not on the marine
bands, yes on the ham bands but ONLY IF you hold the proper
grade of ham license.

>Will they respond to my transmission.

Only if they are ignorant of the situation and want to get into
trouble.

>I don't have any HAM or commercial license to operate any radios.

Then you have no authority to make any transmisions on any band.

Period.

>Thank You all for the info.

You're very welcome.

Of course it is. The R&O was the result of more convenience and easing things for the FCC than for improving the ARS.

> How can you like a present that is screwed up?

I'm supposed to just withdraw from life because I don't like some bureacratic decisions? You can do that, as so many codehaters have if you wish. Not me.

I am presently an Extra.
> I know you don't like that.

You're just a grain of sand in the sea. So long as you refrain from the freeband I don't concern myself with you.

I don't know what he's been up to, but I'd love to hear from him again!
Last time I talked to him was at a ham radio convention in Hawaii back
around 1976.

  My gut feeling, after the first release of the restructuring NPRM, was
that there exists at the staff level of the Comish essentially no one
who knows what the hell ham radio even is. That evidently would include
the "one and only licensed ham" working there. The rewrite they released
did almost nothing to reverse the impression.
 The latest missive only serves to reinforce that feeling.

> "Gentlemen's Agreement" (Band plans, in particular) is an obligation by

law?

In the US, band plans and gentlemen's agreements do not carry the force of regulation or law. However, cases of continued disruptive behaviour in conflict with these accepted plans have been dealt with under rules with deal with "Operation Standards" and "good amateur practice" as quoted below.

73, Hans, K0HB

---------------------FCC RULES QUOTED------------------------------------

Subpart B--Station Operation Standards

�97.101 General standards.
(a) In all respects not specifically covered by FCC Rules each amateur station must be operated in accordance with good engineering and good amateur practice.

(b) Each station licensee and each control operator must cooperate in selecting transmitting channels and in making the most effective use of the amateur service frequencies. No frequency will be assigned for the exclusive use of any station.

(c) At all times and on all frequencies, each control operator must give priority to stations providing emergency communications, except to stations transmitting communications for training drills and tests in RACES.

(d) No amateur operator shall willfully or maliciously interfere with or cause interference to any radio communication or signal.

Hope you have a lot of wire, Cecil.

For a long time I had a quarter wave 20 meter vertical with the base 12 feet
off the ground. Six quarter-wave radials. Worked really well - but it was no
better on 20 than my 80/40 trap inverted V with the center at 35 feet and the
ends at 12 feet. In ANY direction.

With lotsa radials, the picture may be different.

oh mama. Hope it wasn't your sendin'/shootin' hand.

Station is all back together here. Test whenever you're ready.

Thanks, Jon! I saw the MO&O, but I wasn't sure how it would apply to those
already renewed.

This means that of the date you looked there were at least 7079 "Technicians"
who are renewed Tech Pluses. And they have Novice HF privileges.

In addition to the above, an exiting Novice who passes Element 2 (Tech written)
upgrades to Technician, but does not lose Novice HF privileges.

>In the context of the MO&O, the FCC overlooked the fact that that's of

>though
>> the database simply shows "Technician" as the license class. There is no
>easy
>> way to determine exactly how many Techs are actually Techs with HF, because
>the
>> FCC does not keep that information in its database.

Yup. So the database number represents a worst-case minimum number.

To make the situation even stranger, consider the following:

- An individual who held a Novice class license at any time in the past (and can prove it) gets credit for Element 1 (5 wpm), even if the license has long expired, and/or if the licensee subsequently upgraded. However, holders of other license classes who let their licenses expire beyond the grace period get no such credit. The only rationale I can think of for this ruling is the fact that for the first ~23 years of its existence, the Novice was nonrenewable and "nonretakeable".
>
- A "Tech with HF" (Tech with Element 1 CSCE) has Novice HF privileges as long as he/she keeps the license current. But the CSCE is only valid for upgrade credit for 365 days after it is issued. After that, the holder must pass Element 1 again to upgrade to General or Extra.

Thanks again for the info.

Nope. I know lots of hams and some VEs, that's all. Plus I read the amateur
radio news of that time.

>>No, that's NOT what I wrote. And it's NOT correct. You are ignoring the
>>effect of upgrades. Why?
>
>I'm NOT ignoring "upgrades." They aren't included in what I am
>saying because of a lack of definitive, quantitative data on the
>number of "upgrades," who went from one class to another class.

The license totals are affected by uogrades even if they are not separately
tabulated in the AH0A data. You are ignoring that fact.
>
>If Miccolis wants to argue about the NUMBER of "upgrades," he
>needs a quantitative value of that NUMBER that is available for
>reference by anyone.

If Len Anderson wants to ignore the presence and effect of "upgrades," he
needs a quantitative value of that NUMBER that is available for reference by
anyone.

>Any other argument about "upgrade"
>numbers is mere subjective opinion and not factual.

The existence of such upgrades and their effect on the totals IS factual.

>>Your explanation is faulty. There were thousands of post-April-15-2000
>>applications processed by the FCC in late April and in May of 2000.
>
>Nothing "faulty" about it. There is NO valid quantitative number
>value on POST-restructuring APPROVED licenses until the FCC
>has released the figures.

SO? The effect is still there.

Can you PROVE that ALL pre-April-15-2000 applications had been processed by
June 1, 2000?
>
>>>You are attempting discrediting by a false statement of omission.
>>

>>No. I am pointing out your errors, Len.
>
>All that Miccolis has said is that "I made errors."

No. I have said that Len Anderson has made errors. Mistakes. Statements that are not true representations of the facts.

>Were those "errors"
>arithmetic?

Maybe - I don't check all of your calculations. Maybe I should.

>Were those "errors" from using the "wrong" data?

Yes - and from misinterpreting what it means.

>The
>discussion on "Restructuring - did it make a difference" started out on
>the effects of US amateur radio license class privileges FOLLOWING
>the restructuring date.

Your errors are mostly ones of faulty logic and faulty processing of data. The quantitative doesn't matter if the qualitative is faulty.

Here are some examples of your errors, Len. All of the following statements in quotes were posted by you in the past few days in this thread. All of them are not correct. Do you want to retract or correct them? Or do you insist they are all vaild statements of fact?

(begin quotes)

"For Technician-Plus license class the renewals can only be between 10 and 8 1/3 percent of all Technician-Plus licensees."

"For the Technician class licensee, the number of renewals will be small compared to all other classes because their initial numbers were small."

"There is a more sure to determine the number of Technician-Plus renewals that were made Technician or to separate the originally-Technician-Plus from Techician by going to the NEW license, RENEWED, and RENEWED WITHIN GRACE PERIOD tabulations. Since there are no new Technician-Plus license class grants, one can simply subtract the new Technician license number from the Technician class total to see the number of Technician-Plus renewals transferred to Technician class."

"In the 10-month period the number of total Extra-Advanced-General-TechPlus-Novice licensees DECLINED by 10,943 while the Technician INCREASED by 16,029. The net gain was 5,086. It is still growth. Of the Technician class increase 15,970 were new licensees exclusive of any TechPlus renewal reclassification.

That leaves the Technician class total change
"off" by only 59 "others," presumably from the TechPlus renewal
reclassification."

"Those 15,970 new Technicians still don't have any HF access with/without
CSCEs."

"In the period between the end of June 2000 and end of March 2001 there was a
difference of 59 between the NEW licenses
(exclusive of renewals or other changes) and the change of Technician class
license totals over the same period. I never
discounted anything."

(end quotes)
>
>>The only "bad form" is your denial of the obvious.
>
>Which time frame is Miccolis using? Two of us in this thread were
>discussing the POST-restructuring effects. That period cannot be
>made valid by including data prior to the restructuring date.

I'm not talking about time frames. I'm talking about your logical errors. See
above.
>
>>No, yiu haven't. But from the renewal rates, it's clear that the death of
>>hams is the main cause of attrition.
>>
>>>Quit lying.
>>>
>>Did I write that you wished for hams to die? No. I asked a question. If the
>>answer is "no", all you have to do is say so.
>
>Upset?

Not me. You obviously are, though.

>Miccolis made a loaded statement and it went off in his
>face.

What "loaded statement"?? I simply asked if you wish for hams to die. What's
the big deal about answering that question?

What "lie" have I written? I just asked a simple question. If the honest answer
is "no", what's the problem?

> Wounds are not healed by trying to shift blame.

Then why are you trying to blame me for something I have not done? You tell me
to "quit lying" and talk about "loaded statements" when all I did was ask a
simple question.

>>>The code-tested classes are, as a total, reducing
>>>in numbers...by dropping out one way or another.

>>
>>And the most common reason is....?
>
>...whatever someone wants it to be, subjectively. There is NO
>reference point for the reasons behind dropping out. I gave NO
>opinion on reasons for dropping out.

Nobody said you did. It is common knowledge that the death of hams is a primary
reason for nonrenewal and cancellation of licenses.
>
>Why do you continue to imply "wrongness" by manufacturing
>conditions which did not exist?

I have no idea what that is supposed to mean.
>
>>In other words, I've pointed out that Emperor Anderson has no logical
>>clothes.
>
>...only because Miccolis has tailored his response.

Nonsense. You can answer the question. But I notice that you don't answer
questions here.

> [he made
>the pants too long...with no buttons...]
>
Nope.

>I used publicly-available data over a time-period that is logical,
>the FCC's processing time included, on post-restructuring.

Your time period is based on subjective speculation of the FCC's processing
time.

> My
>only subjective opinion statement was on the TREND of future
>US amateur radio licensing and license classes.

Nobody denies the trend.
>
>>Try reading and understanding Part 97 and the explanations on the Speroni
>>site.
>>Your denial of the obvious is boring, Len/
>
>The reading and understanding has been done here some while
>ago.

Your understanding is still faulty.

> Miccolis should try to employ some logic to his own
>statements rather than a lot of subjective (and imperious) remarks.

Emperor Anderson has spoken.

>
>The only BORING part of this is attempting to establish conditions
>and time-frames which have been WRONGLY applied by another.

Nope. The use of any timeframe in a nonvalid process yields nonvalid data. You use nonvalid processes - bad logic - mistakes - errors - call 'em what you will.

You can call me names but that won't make your faulty logic any more valid.

N2EY

FYI. Here is the sequence of events:

1. Twistedhed got tweaked unmercifully in rec.radio.cb
2. Twistedhed decided it was Leland doing the Tweaking
3. Twistedhed spread his belief all over the net.
4. Unfortunate saps like Richard believed Twistedhed
5. The real Tweakers admitted they had done the tweaking and not Leland
6. Twistedhed refuses to give up the idea it was all Leland's fault
7. The whole world is laughing at Twistedhed

1. You got caught spoofing, live with it.

2. The discussion in question is whether to recommend a Tech ticket to a newbie -- given that the code requirement is going to be with us for some years. I would not, any more than I would lead him to an open elevator shaft. What Techs do is not of giant interest so long as it does not have an effect on me. Do not overestimate your importance in the giant scheme of things.

3. I will admit to confusion but I am my usual cynical-chic (thank you, Len) self overflowing with calmnity and dignitude. Most of the confusion comes from your spoofing.

You know, Hans, Geritol on the rocks MIGHT solve your attitude problem. Or maybe some Ex-Lax Cookies would be more appropriate?

I think the latter.

>Message-id: <td3tfj6ap8cedc@news.supernews.com>

>A lawsuit would be a very good thing for the ARRL at this time.

As if they haven't got enough to deal with, you'd add a frivolous law suit. One that would have NO chance of winning ANYTHING.

>You could drop the lawsuit if the League Board of Directors would admit and agree that:

>1.) Restructuring was a mistake. Ham radio is dumbed down now.

Restructuring was NOT a League initiative. It was an FCC initiative. Sue them. Better yet, find Dick Bash and his ilk and sue them. Thier "test gudes" are what "dumbed down" Amatuer Radio.

>2.) Restructuring isn't producing knowledgable operators.

We have not been doing that for at least 20 years...since we allowed the Carter-era cowards to allow "open pools"

>3.) They were wrong in proposing their restructuring proposal.

Again...the FCC, not the League, initiated Restructuring. The FCC's final draft was not what the league proposed.

>4.) That their restructuring plan was only meant to increase membership not improve ham >radio.

How? This is a ludicrous statement. And in any case, MORE Hams would mean (ultimately) more League members. The former does not follow without the latter.

>5.) Their restructuring plan ignored the wishes of the membership.

How? In what definitive poll have you come to this conclusion? YOU are upset therefore ALL ARRL members were ignored?

>6.) They made a mistake in not opposing the FCC restructuring plan.

The FCC did not initially have a "plan". Thier final draft was the work of post-comment planning. The specified topics on which they wanted comment, but had no "plan".

>7.) That they agree ham bands are now worse since April 15th 2000.

Any "worsening" of the Ham bands is NOT coming from Amateurs. It's coming from unlicensed truck drivers and hobbyists on the bottom end of 10 meters.

Any other "admission" would be a lie. The "bands" have not changed one iota since 15 April 2000. There has been no major flood of new callsigns on the air, bandplan "violations", etc etc.

>8.) That they will work to promote better licensing standards and exams.

They are already doing that. That they are the largest retailer of licensing materials and the largest VEC is evidence of that.

>9.) That they will stop acting like bunch blithering idiots

I hope they sue YOU for that remark. They won't, since they have a bit more class than that, but they could. And you'd deserve it.

>10.) That they'll listen to their members and not ignore them.

If they ignored them as you assert they do, they wouldn't be "in business" very long. It IS a membership organization and not everyone is going to be pleased all the time.

>If the League would agree to these I might even rejoin and start supporting them again.

I am sure they will rush right out and immediately stop everything they are doing and kowtow to YOUR ideas to get YOUR dues.....yeah...right.

Again...it's a "membership organization"...More than one person has an opinion on how things should be run. Some of those opinions are probably contrary to yours, but are nonetheless just as valid.

If you want it "Your Way, Right Away", stop at the drive through at Burger King, Vince. They will be glad to take your order.....

Hey Vince.. restructuring is a fact. Get over it.

A multiple choice 20 WPM Morse code test doesn't teach anyone much.
It's no loss.

Believe what you like Richard. I thought you had the smarts to figure it out sooner or later. Now it looks like maybe never. Seems like being able to pound brass at a breath taking rate does not help you to figure out who is really who, even after it has been explained to you.

> 2. The discussion in question is whether to recommend a Tech ticket to a
> newbie --

The discussion I was referring to had to do with your self admitted bigoted comment about not acting as a VE for somebody who has a Tech Class License.

> 3. I will admit to confusion but I am my usual cynical-chic (thank you,
> Len) self overflowing with calmnity and dignitude. Most of the confusion
> comes from your spoofing.

I don't need to spoof anyone Richard, even you. Unlike some of the posters, I don't have any phobias about signing my real name to what I write, regardless of what other people may think about my comments.

Actually, it is one of the fastest growing hobbies that
radio enthusiasts are discovering.   Boats respond to your
calls quickly and it is possible to make many new friends.

AES and Radio Shack sell some really affordable marine
radios too. Judging from the growing number of people coming
into this new hobby, there are probably thousands already
having fun on the marine bands.

Listen for "Robbie 782, the juggler."

Robbie

I only know personally one person who ever got tetanus at all. He got it from a rusty nail in a barnyard. But it's out there, like gold, where you find it.

Any such radio operation would be a federal offense with potentially

serious consequences. The only way you can legally operate two-way HF
radios for recreational purposes is via the Citizens Radio Service (no
license required) or the Amateur Radio Service (ham license required).

>
If you got stupid and put the M700 on the air anyway you most likely
would be ignored by the legitimate users of the marine frequencies.

Great hobby!  Pleasure boats haven't used call signs in years.  They use
the name of their boat as a call sign.   I recommend the UNIDEN MC-1010
from AES or other outlets.  It's $129 and your're on the marine band
having fun talking to pleasure boats around the world.  Add a linear if
you want.  Make up a name of a boat, like Lilly B, or  Sally J, and
you are on the air.  I talked to a guy last night near Tahiti from
here at my home in Oklahoma City.   A guy in Radio Shack told me they're
selling dozens of marine radios a week to radio hobbyists.  He said it's
the latest thing in radio fun.

Steven,

IF I read FCC's logic in this refusal, it seems that their refusal is based on the fact that IF a person held a General, Advanced, or Extra ticket in the past, then at some point PRIOR, that same person held a Novice ticket, right? So, to their thinking, there is nothing to correct. That is....if I see this issue correctly. The point is only 5WPM. So that person passed that to get a Novice ticket. If I am wrong, please correct.

Hello All,

Here we have the perfect example of why some people thrive in the domain of the Internet but are essentially social outcasts no matter what thier socioeconomic background.

I received this via private e mail. Of course this cretin cannot successfully argue thier point in a public forum. No matter how you look at it, it really is a "no win" situation. There are now and shall continue to be, for the forseeable future, an application for Morse Code. It's a fact. Some commercial ships still use it, the Armed Forces of most countries still teach it, and of course it is still the "least common denominator" of Amatuer Radio.

Not to mention this "post" came from comments made some time ago...NOT April 10th as quoted and NOT in context, therefore, as ususal, hardly timely nor applicable.

Does it need to be a mandatory requirement for Amatuer licensure?

Probably not. But the United States is NOT the only natioon in the world with a say in this matter, and even when we do get to voice our opinion, it still only counts ONE vote like any other soverign nation of the world.

I think we can safely narrow the field down to about four people who generated this letter. My first guess is of course Leonard H. Anderson. He has already demonstrated that his "position" is indefensible, and he must resort to profanity and the "help" of "anonymous" friends to make the point. Furthermore, it follows the pattern. "W2DNE's" posts always follow a "lull" in Lennie-isms.

My second choice is Hans Brakob. "W2DNE" usually posts in response to comments made by, for or in deference to Hans or Lennie. Not always, but often enough to have made a pattern obvious.

In either or any case, it matters not. Anyone who cannot put their name to thier comments in a public forum is probably having sex with a deceased parent or underaged neighbor, and their reward shall come soon enough.

Not that AOL will do anything about it, but the letter was TOS'ed, and the rest is on it's way to the trashcan with the rest of the refuse.

Steve, K4YZ

There is no country, 3rd world or otherwise, which has any use for Morse Code telecommunications infrastructure. Technology is the cheapest thing in the world these days, and Morse ain't gonna cut it.

You're a dumb sumabitch, and you're really good at it!

What does that statement have to do with the topic? People who operate
without a license (for an operation requiring a license) are breaking
the rules. After they get the license they are no longer breaking the rules.

  And then driving the wrong way on a one-way street when it
  strikes their fancy.

  Some would, others won't.

  The FCC refers to such marine band "pirate station" as "kitchen
  coastals" from the days when the usual such installation was in
  the home of a commercial fishing vessel owner and used by
  family to contact the vessel without benefit of license as a
  Private Coast Station or the services of the various Marine
  Operators (Public Cost Stations).

  When the US Coast Guard or the commercial marine users (ATT and
  Globe Wireless, for instance) feel that they've had enough
  competition or complaints, they get the FCC to do "make an
  example" sweeps.

  Like catching fish in a barrel, BTW...

Look up the case of Arthur W. W. Brothers who set up two of his land-locked "clients" - two brothels in Nevada - with marine radios, got them licenses as the vessels "Sherry" and "Betty", and provided them with radiotelephone service through his Lake Powell Marine Operator.

When all the dust settled, he lost every FCC license that he had - his Marine Operator services (a printing press for money in those days) in several parts of the country, the licenses for all the Mobile Operator and link channels for the telephone company which he owned, the license for his private plane, his commercial operator license, and his ham radio license. In the process he wound up "donating" a goodly chunk of his cash to his lawyers.

Had he not been a licensee, he would have been hit with a hefty fine and possibly jail time in a criminal prosecution.

Nowadays the FCC can get you both ways - monetary penalties AND
loss of license.

Oh, I forgot -- one of his Marine Operator stations was found
installed at the top of Navajo Mountain without the necessary
permit from the Navajo Nation. The equipment was seized by the
Chief of the Tribal Police - in real life the Navajo Nation is
part of the United States only when it wants to be part of the
United States - converted to 2-meters, and has run for several
decades as a 2-m repeater under the ham license of said chief.

>I talked to a guy last night near Tahiti from

Fun until the Feds get around to you......then it's no fun at all.
Your turn will come.....

And what might that be?

> Leland lies and so does n8wwm.

The one who likes me so much that he forges posts in my name does. As far as N8WWM goes, you will have to ask him because I'm not a mind reader. On the other hand I do make an effort to keep my language clean, no potty mouth words from me. Then finally I don't have a problem putting my real name to what I write. I don't need to hide behind fake screen names like some do. I will continue to post my views, using my real name, and I don't really care if anybody agrees with them or not. These news groups are a public forum. So whatever agenda, and behind the scenes skullduggery, that is employed by the truly responsible party(s) will in no way alter my postings, nor the views they contain within.

In article <e9NA6.75420$XV.19160736@news3.rdc1.on.home.com>,
tstdenis3160@home.com says...
>
> > Full health....maintained in my retirement for life
>
> OHIP covers me ... and thats out of my taxes ...
>
Wow, there's a great system. What's the wait for non emergency surgery
now?? How many months? I remember reading that US hospitals along the
border are doing great business because the Canuck health system sucks so
badly. I'd be mighty proud of that one.

> > Full Maintenance on my personal plane. THAT'S FULL. That means annual
> > inspections...oil, tune ups, and engine rebuilds HHHMMMM last year that
> > came to $15kUS.

If ever.

> > I guess I'll have to hide my shame at being an overpaid taxi flyguy
>
> Making money isn't everything ... just think that well ... when you retire you would have done nothing but cater to a bunch of rich guys ... you never helped a soul and all you did was feed your greed ... what a lovely person to be ...

Nope, I feed my family. I put my children through school so that they'd be able to start off life without huge debts. I bought a nice house here in Eastern LI to raise them and then was able to buy a condo on Sanibel Island so we'd have a nice place to relax in the summer. I have a small house in Sherburne Center, VT on the slope of Killington Ski Resort.

As to catering to rich guys....I catered to the owners of a highly successful cosmetics firm who preferred flying in private as opposed to commercial cattle transport.

As to helping...I'd check out the Angels of Mercy website. I'm there Rob. My company allowed me enough free time to do more than you'll ever do in your pathetic little life in that regard. And even though I am retired, the still sponsor my flights, which average 2 per month..anywhere anytime, so fuck you very much.

Must suck being you knowing you'll amount to nothing living off the Canadain governments teats. KNowing when you retire you'll have been nothing more than a hired thug beating innocent people with your expendable baton. BTW

> use force to detain someone who I have witnessed commiting one

Nice try. I'd go back and re-read that section again. You have zero
rights as a security officer in that regard. You are nothing more than a
glorified citizen on patrol.

>

this coming from someone who spells controlled as
C O N T R E O L L ED????

>
> I have yet to use it ... and again ... we dont need to threaten people to
> get them to do what we want them to
>

gee..another slap at the US. Better stay up in Ottawa where's there's no
crime...just little baton carrying security officers like you and Tasha
Yar on the Star Ship Enterprise

Royal Canadian Mounted Police starring Rob St.Denis as the horses ass.

You go girl See you in the friendly skies. Try not to hit the mountains
as you use your little GPS to get from one place to another.

How can you tell some pilot has been using a GPS to fly with???

The splatter he makes after crashing is in a direct line with his
departure and his destination.

Oh that's right..you am the pilots pilot.. ha ha ha

I gotta go now. I'm off to Florida for the Easter week. They serve a
great Sunday Brunch at the South Seas Plantation on Captiva Island.
Hopefully Ft Myers International won;t be too back up this time of week.
All those frigging Canadians flying into Florida. Must be a shame they
waste all that money that they earned..the greedy bastards

Take care Rob St.Denis SECURITY OFFICES driving the mighty SECUWORKS
Chevy Lumina with real action light bars.

You must be the Inspector Clouseau of the Province what a buffoon

You are MarK Morgan...aren't you?? If not you sure act like him. Tell
me...did you're wife beat you and did you run off and change your name to
keep her from finding you?? Bet ya did

Much later....if ever.

this was way too easy

Well considering people are selling ohip cards and other health cards at
5-6000 a pop to americans ...

I needed reconstructive surgery on my hand when I damaged a nerve. I had
exploratory surgery after a week and reconstructive another week after that
... not bad considering it was not an emergency

> If ever.

It's been a year and a bit ...

> As to helping...I'd check out the Angels of Mercy website. I'm there
> Rob. My company allowed me enough free time to do more than you'll ever

I am in Red Cross ... I have ran shelters in several emergencies and disasters in the time I have been with them ... Through some simple emt training I learned skills that allowed me to save a total of three lives in the passed two years ... After I got my "wings" I flew with the young eagles to allow kids time in the sky (at my own expense) ... I have been a leader with the scouts and an instructor with the cadets ...

> Must suck being you knowing you'll amount to nothing living off the Canadain governments teats. KNowing when you retire you'll have been nothing more than a hired thug beating innocent people with your expendable baton. BTW

That's it all cops do is beat innocent people ... remember that the next time you need one

> nope. knew that. And I wasn't an honours physics major.

well 12yr olds know about it ... you dont need a degree for it ...

> As opposed to 80% of Ontario Provenice??

its province ...

> Nice try. I'd go back and re-read that section again. You have zero rights as a security officer in that regard. You are nothing more than a glorified citizen on patrol.

essentially ya ... but even a citizen has the right to use force to detain a subject ... considering force (or assault) is any force (even a hand on a shoulder) to which the subject did not give you permission ...

> The ride the little motorcycles.

up here they ride go carts

> this coming from someone who spells controlled as
> C O N T R E O L L ED????

exactly ... typos are typos .. who cares ... its pety to bring them up ...

> gee..another slap at the US. Better stay up in Ottawa where's there's no crime...just little baton carrying security officers like you and Tasha Yar on the Star Ship Enterprise

Well when I spend my summers in the hamptons I don't get much hassle from the cops out there ... must be just a mainland thing ...

>
> Royal Canadian Mounted Police starring Rob St.Denis as the horses ass.

Actually I was thinking of going opp so I wouldn't have to go too far ...
tired of moving ...

> You go girl See you in the friendly skies. Try not to hit the mountains
> as you use your little GPS to get from one place to another.

But that doesn't cover anyone who did NOT enter via the Novice class. A
former maritime CW operator who started with a General doesn't count!
Hard to believe they can't get something so simple right.

Actually, he reports reception of his own echoes. With just a 10 foot TVRO dish, that's really impressive. Frequency used is 10.368 GHz.

Also on that site is a 5 watt 1296 MHz QSO with W7SZ using 5 watts of power. The mode used requires 15 to 30 minutes to transfer the 28 character message, though.

Neat stuff - makes EME possible for those of us without the real estate for big arrays.

Thanks for defending the marine frequencies, Phil. Let me add a few details that might interest anyone else reading this thread (I'm sure you know all this, Phil, but others may not). The FCC is responsible for marine radio licensing and for all enforcement of regulations. However, when it comes to interference with navigation, or interference with distress communications, the United State Coast Guard (Department of Transportation) is the primary enforcement authority. And these situations are often dealt with in criminal court, not through fines or other similar methods.

Both the Coast Guard and Navy maintain a round the clock watch on all marine distress frequencies from over a hundred fixed stations around the country (in addition to water and air assets). Likewise, both the Coast Guard and Navy maintain a number of RDF facilities to monitor all marine frequencies (not just distress frequencies - all marine frequencies are secondary distress). This also includes RDF equipment that can be carried by hand or in a vehicle (CGAUXCOM personnel receive training in this).

The penalties associated with these laws are very severe. In fact, if the interference results in loss of property or life, the illegal operator can look forward to spending a significant portion of his remaining life in prison.

In certain situations, if the person is operating illegally, criminal prosecution can occur even if the person is not aware that he is interfering with navigation or distress communications (it is miles away and cannot be heard from his location). The premise behind this is that the interference, and therefore the resulting loss of property or life, was a direct result of the person's reckless disregard for proper operation and procedure (in these situations, the loss would not have occurred if proper operation and procedure was followed).

And, finally, I'll add one more point (since it is occasionally mentioned in these discussions). Marine communications is used throughout the country (lakes, rivers, etc), not just around coastal areas. Therefore, you're not free to use a marine radio just because you live miles from the ocean.

>And the only remedy is to vote them out at the next election.

That's no remedy at all! By that time, the damage is done, usually irreparably. The only solution would be binding referenda by membership on every major issue. Unfortunately, when it comes down to that, membership scares itself away from that option as well, even after complaining 'no one listens to us.' Either way, then, 'the voters get what they deserve.'

> ticket in the past, then at some point PRIOR, that same person held
> a Novice ticket, right?

Not necessarily. Many, many folks have never taken a Novice test, nor held a Novice license, nor taken a 5WPM Morse test.

The only two written tests I ever took were the Conditional and the Extra, and 13 & 20 WPM Morse tests. (No, you didn't need to take all the other tests, only the test of the class you applied for -- you did need 2 years time-in-grade as C/G/A before you could take the Extra exam.)

Under the rules, if I were to let my license lapse for over two years, I would need to take a 5WPM test to get a General or Extra license.

Under the rules, my cousin who held a Novice license for 1 year and let it lapse in 1954, has credit for 5WPM and can become an Extra without taking another Morse exam.

The ARRL pointed this out to FCC, but they apparently didn't understand the question, and the gobbledygook in paragraph 17 is their response.

 So long as they stay within the rules! When a freebander, newly
licensed as a ham, reverts back to his old ways - or a licensed ham
decides to "talk to those buys" with his ham rig, according to you he's
legal. Not so.

Aw, Gee! You codebashers have been insisting that "No one uses CW for
anything serious anymore". Could it be that y'all haven't a clue what
you're talking about?

"Greg Elsbernd" <ki8jc@arrl.net> wrote:

> The "credit" is given to those that have a CURRENT license, not
> an expired one.

Not so fast! Go read the rules (�97.505 Element credit). You will find
the following categories of persons can get credit for Element 1 (the
5WPM test.)

--An unexpired (or expired but within the grace period for renewal) FCC-granted General or Advanced Class operator license.

--An unexpired (or expired but within the grace period for renewal) FCC-granted Technician Plus Class operator license.

--An unexpired (or expired) FCC-granted Novice Class operator license.

--An expired or unexpired FCC-issued Technician Class operator license document granted before February 14, 1991.

Read those all *VERY* carefully. (I copied the words exactly from the rules.)

Now look at the last two again. Note that there is no mention of the grace period. The rules specifically allow those two categories (but no others) basically a lifetime "free-pass" for the 5WPM test. My cousin whose Novice license has been expired for almost a HALF CENTURY can come back into ham radio, advance all the way to Extra, and will never need to take a Morse test.

> Some person walks into a VE session and says "I used to be a general,
> but I let my license expire 13 years ago, can I get credit for the
> 5 wpm test?"

The answer is "No".

But if his 13-year lapsed license was "Novice" or "Technician", the answer is "Yes".

The FCC is seriously out to lunch on this one!

Whew! At that frequency the gain of a 10 ft dish is more than 37 dB.
I'd have to get the books out again to figure it. (A ham pal and I once
built a few C-band TVRO dishes to use, and for a few friends. He made up
a jig in his metalworking shop to form the parabola in segments.)

The very best thing you can do is to totally ignore him, and them. He did go away for a long time when everyone stopped responding to his drivel. I haven't read a psoting from him other than what someone else quoted in a few years. There is so little he ever said that was worth reading that absolutely no loss was involved. Henceforth the Physicist/Security Guard from the tundra gets the same treatment here, for the exact same reason.

  Because the ALE acronym stands for Automatic Link Establishment.

You have to understand the bureaucrat/lawyer mindset to see the logic.
It's basically that presenting evidence of passing a 13wpm or 20wpm
code test is just that. It is not evidence of passing a 5wpm code
test. The requirement for a new license is evidence of passing a
5wpm code test. An expired technician-plus or novice license is
such evidence. Anything else is irrelevant.

This flies in the face of the commonly held belief (and practice)
that competency at higher code speeds implies competency at lower ones.

Or maybe they did it just to piss off the older, already licensed
hams.

Perhaps this should give the amateur radio community pause before it consigns its microwave allocations to commercial interests who would "make better use of them by turning a profit".

I suppose you'll never know personally, but that's not pertinent. It's
really
just another example of how 'logic' falls flat on it's face. Slow code
cna be a real drag that tends to put a practiced operator to sleep, or
at least into some level of boredom, but it's grossly inaccurate to say
that a fast operator can't do it at 5wpm. Not so.

>
> Or maybe they did it just to piss off the older, already licensed

If so, it was a dismal failure which translated instead more into
perceived
contempt of their abilities to understand the factors that are their
responsibility.

They are not 'ours' to consign. Not that long ago hams were allotted
all frequencies above UHF. That was because there was no commercial or
govrenmental use for them in those (and earlier) times. That changed,
and naturally so did our amateur allocations. That process is just
getting well under way. We can expect it to continue, whatever we do or
do not.
Conversly, we can expect some expansion of our HF spectrum - as we have
had beginning in 1969, because of lessened commercial and governmental
demand -so long as no new and extensive uses are found to reoccupy HF.

I heard that China still actively uses CW. Anyone know for sure?
Might be a good reason to not abandon it entirely????

If he is freebanding in the ham bands and gets a license, he is no longer freebanding. If he is freebanding outside the ham bands, he has little incentive to continue to do so after he gets a ham license. Just as getting married makes an honest woman, getting a ham license tends to mellow out freebanders. Otherwise, they wouldn't spend the time and energy to get a ham license.

Did you hear that a bill has been introduced into the Texas Legislature that will allow illegal aliens to obtain driver's licenses? The theory is the same. If one drives a car, it is better for one to possess a driver's license.

> - or a licensed ham
> decides to "talk to those buys" with his ham rig, according to you he's
> legal. Not so.

"Those guys" quoted from a posting long ago, referred to me talking to CBers using my legal Radio Shack CB radio. Nothing illegal about that. And emergency communications are legal using almost any equipment on almost any frequency. I'm surprised an Extra class licensee is ignorant of such things.

I do not think there is any "real policy' on this subject , but I
would like to inquire as to what common practice might be.

Ever since I started in thsi hobby I have alwatys logged the "start
time" of a QSO in UTC as the official time. Howevere.. I sure receive
a awful lot of cards that obviously log the "end time" as the officila
entry.

I don't think there is any question that UTC should be used but... I
was wondering about the the "beginning or end" question.

Bill..

You're the reason the codebashers exist, Dick. I ask a civil question
and get a malevolent hatefilled response from you.

If the FCC had not been so strick on experimentation of various communications
methosd, modes, etc., just think of how much new stuff we could invent.
Oh, but that would drive us further out of business!

Those words from the "chief" really sound disturbing.

Or was this a joke?

A slip of the concept. The acronym "ALE" stands for Automatic Link Establishment. My error in typing.

I was thinking of a previous job wherein the ALE controller did the effect of Analysis by determining the desired path MUF. That's not the task of ALE but rather a byproduct of the initial test-exchange protocol.

Are amateur radio licensees experimenting with ALE? There are, or at least were, two of them. Do you know who they are?

>>So...Miccolis has some kind of psychic power to see through
>>publicly-available databases to determine "quickness?"
>
>Nope. I know lots of hams and some VEs, that's all. Plus I read the amateur
>radio news of that time.

If you personally knew a thousand hams (and some VEs), that would
still be less than 0.2% of all US licensees. How many
Technician-Plusses did you say you "knew?" :-)

>The license totals are affected by uogrades even if they are not separately
>tabulated in the AH0A data. You are ignoring that fact.

Not ignoring anything...only working with another's tabulations.
If that is displeasing you, contact AH0A about his methods.

>If Len Anderson wants to ignore the presence and effect of "upgrades," he
>needs a quantitative value of that NUMBER that is available for reference by
>anyone.

The FCC database, in two files, is about 72 MB. If Miccolis has
the ISP time and a search-and-tabulate computer program, he
can do everyone a favor and show his work. Everyone else can
make do with what others provide free of charge.

>>Any other argument about "upgrade"
>>numbers is mere subjective opinion and not factual.
>
>The existence of such upgrades and their effect on the totals IS factual.

Your explanation is insufficient to resolve the subjectivity of
trying to say that upgrades "have an effect."

In the ten months from the end of June 2000 to the end of March
2001 the number of Technician class licensees increased by
16,029 but of that, 15,970 were new licensees exclusive of any
upgrading or modification or anything else except being new.
That leaves a difference of 59 which can be attributed to anything
other than a new license. Those 59 MAY include all those
Tech-Plusses who were automatically "renewed" as Techs, but
that group only represents 0.37% of the total change.

>SO? The effect is still there.

How BIG of an "effect" did you say it was? :-)

<"quotes" from past messages omitted for brevity...>

>Your understanding is still faulty.

OK, so 0.37% of all those added Technician licensees represent
something "significant" in showing that "many" Tech-Plusses
were "renewed" as Technician?!? 59 out of 16,029? I don't think
so...

>Emperor Anderson has spoken.

Now, now, you are getting testy... :-)

>Nope. The use of any timeframe in a nonvalid process yields nonvalid data.
>You use nonvalid processes - bad logic - mistakes - errors - call 'em what you
>will.

Tsk, tsk, you don't accept what I said so that means it is a
"mistake, bad logic, errors?" Of course you won't accept it
since that means acknowledging mistakes and bad logic on
Micollis' part. :-)

>You can call me names but that won't make your faulty logic any more valid.

Using another Extra's own sorting-and-tabulating values,
available free of charge to anyone, is somehow "faulty?"

Of course it is "faulty" because the data tabulations go
against the True Faith of what many think that US amateur
radio "should have." :-)

If the data shows trends away from what "should be" or
what is urban myth, then the data and everything about it
is "faulty." :-)

If the data is presented by someone not licensed in the US
amateur radio service, it must be "heresy" and considered
"faulty." :-)

Well, my dipole is not an inv-V and it is one wavelength on 40m. That is supposed to leave some severe holes in the radiation pattern. I'm hoping that the vertical will be better than the dipole in some direction at some distance.

> oh mama. Hope it wasn't your sendin'/shootin' hand.

Actually, it is right where the grip safety fits on my Colt-45.

How do they know what the bulk of their membership thinks? I'll bet
90% of ARRL members have never let their thoughts be known to the BOD.
With so few members who ever actually make their thoughts known to
the BOD, the BOD can rationalize almost any philosophy.

If I had known that me freebanding would bother you, I would have
done it long ago. :-)

I was SWLing the other night and found a number of CW signals between
40m and 20m. Anybody know to what service they belong?

In article <%oCA6.72516$XV.18227191@news3.rdc1.on.home.com>,
tstdenis3160@home.com says...

Can't read eh Security Officer St.Denis?? I said "I crap my hands for you. This is a a favorite line for another mental giant who resided in Canada...some twerp named Masa who was going to McGill to be a stock broker. So you see Security Officer St.Denis, you may need to read just a tad better.

BTW, do you get to carry a gun like those guys in the movie..I forget the name, starred John Candy and another couple of 2nd City people. They played bumbling security officers. They carried a gun too.

As to shack. It's nice. Central AC...100 foot tower with assorted antennae. Some nice radio gear, computers..very comfortable when I want to shut out the world, not that eastern LI has that many people. Still, all in all alot nicer than your house there Security Officer St.Denis.

Mr. Sulu...send a Security Officer to deck 34....intruders alert. Eye Eye Captain. Security Officer St.Denis report to deck 34. Phazers on stupid..try not to shot yourself again this time..

Molsen Ice..just as nice for 3 times the price

```

Check it out! That poor, terrified, crackpot, defeated bastard TWISTEDHED is HIDING in rec.radio.amateur.policy and posting under the name "fagadair-no-spam@cotse.com"

HAAHAHAHAHAHAHAHAHA!

It must have been a terrible blow for Twisted to realize he was completely WRONG. We think it pushed Twisted "over the edge".

For everyone's entertainment, let's review the sequence of events:

1. Twistedhed got spoofed unmercifully in rec.radio.cb
2. Twistedhed decided it was Leland doing the spoofing
3. Twistedhed spread his belief all over the net.
4. Unfortunate saps like Richard and Jerry O. believed Twistedhed
5. The real spoofers admitted they - and not Leland - had done the spoofing
6. Twistedhed refuses to give up the idea it was all Leland's fault
7. Twistedhed ran away from rec.radio.cb and hid in rec.radio.amateur.policy! He's afraid to even post under his own name
8. The whole world is now laughing at Twistedhed

Well my shack includes my ts570s, ts-440sat, crappy little htx242 for packet (along with a AEA PK-88 I bought at a ham fest out here), my ic-821 for satelitte. A mast mounted preamp from DEM for 440, a homebrew 12.2m parabolic and homebrew az, el rotor for it. I have 2 phased 13-b2's on my 30' mast with a cheesy little radio shack tv antenna rotor I found in the garage when we moved in. My computer is a AMD k7 1200MHz on an ASUS a7-v motherboard. 768mb ram, 42gb of hd space, a guillemot 5.1 sound card, a wintv theatre pro card, 19" flat screen lcd monitor and cable modem connection to the net via the @home network. My mobile station includes a ic-706 (fun toy), tecra 8100 (from toshiba if yare looking it up) laptop, athlon k7 500Mhz in the trunk (for my mp3's and dvd).

So before you denounce this job I have ... I would consider just where you stand first.

Maybe he should get negative commissions.  I am less likely to buy a
W9INN antenna now that he's advertising them.

73, doug

who does need a restricted space 160M antenna that will also do 80M.

Actually Security Officer St.Denis EYE EYE was correct. I equate your
little security position to the guys sitting outside the local NYC Grren
grocers making sure no one rips off the mangos.

They stand there with their shiny tin badges and official MagLights and
go EYE EYE, you no touch da fruit hokay??? EYE EYE, youse need to pay
fo dat fruit hokay???

ANd I never said anything about the military now did EYE Security
Officer St.Denis?? Tsk tsk. canuck education can't read, can't
comprehend. BTW, isn't AYE AYE a naval term? Did Canada have a navy??
Must have had many major sea battles on the Great Lakes wow

And I don;t drink any of the Canuck crud, so you're right, I wouldn't
know how to spell Molson, as if it really mattered.

Security Officer St.Denis..report to Aisle 5. Possible
shoplifter.....bring your can of Dr Pepper spray.

Not bad. My computer is a 486 33 with 48meg of ram and 2 430meg hard
drives. Runs the 1000d and control the hamIV rotor. Runs DX4WIN,
Pakterm99 and CT. Have an Aplha 89 that I picked up used, and is rarely
used since the tower sits 20' of LI Sound and the salt water, although
killer on the equipment makes for a excellent ground.

>

I stand 6'3 in my stocking feet. I was a corporate pilot flying out of
McArthur or MacArthur Airport (spelling varies according to different map
makers). I retired just last year at 55.

ANd I usually stand first when I stand

So a snappy salute to you Security Officer St.Denis and a mighty EYE EYE.
Don;t take any rotten fruit.

Aye Aye is a naval term ... and yes Canada does have a navy, although we have evolved to the point where defence is irrelevant (notice noone comes and bombs our harbours, office building etc) because we aren't savages who's only way of getting respect is to shoot, bomb, pilige or rape it out of them.

My job is strictly to get some pocket money while I'm in school since a full time employment would be impossible. Since I am training to become a police officer a security officer's job seemed right to me. Occasionally we do do static security, but a majority of our services comes from patroling neighbourhoods who hire us to do so.

When we do static security, the most part of our work is just checking on the building (i.e. alarms, and thefts ... sure its dull but someone needs to do it)

As for the beer comment, quite frankly alcohol is of no use to me. I am not a weak willed inDUHvidual (sorry S.A. for using your term but it fits) such as yourself who requires alcohol to dull his senses and escape reality.

And my pepper spray is 10% o/c. My baton isn't plastic its a 21" asp expandable baton. I don't carry a badge, no need to. That is typical american clout, after all a pfc should have a chest full of awards eh?

Gee I bet you are damn proud of those plastic propellers you had on that 100$ suit you wore day in day out flying people around in your fancy taxi there bub ... any idiot with 35k can get a commercial pilots licence. Heck, since you believe I'm such a boob, I got my ppl with IFR, MER, NFR's when I was 18 ...

I got a degree in physics at Ottawa U after transferring there from Windsor U. I worked as a telecommunications technician for a short time (until I realised how boring it was to sit at a desk doing meaningless work in telecomms). I decided in january that forensics would be more interesting and a very adequate use of my physics knowledge. To do so I need to become a police officer first. So here I am, in school again and working as an officer.

So again before you insult other people, mister plastic wings wearing cab driver guy, I'd consider where you stand in relation first.

Actually, that introduces another problem:

Some post-April-14-2000 applications were processed by April 19, 2000.

That's why I have gone with an April 18, 2000 date as the only authoritative date to cut off the FCC database at for purposes of comparison. Also, some groups had regular, full-blown, NOT upgrade-only sessions on April 15, 2000 because that fell on their REGULAR session day for that month. If you choose a later date, you will miss some upgrade actions....

I think everyone is reading more into it, and the ARRL is not thinking
straigh on this.

The "credit" is given to those that have a CURRENT license, not an expired
one. If someone once had a conditional, general, or advanced license and
they kept current then they would not need this credit because they would
still be a general, advanced, or whatever.   I don't think the credit should
be given to anyone who has let anything higher than a novice or tech plus
license expire. I think the ARRL is confused on this one, in thinking it
discriminates anyone. The only people this affects are those that for some
reason let their licenses expire.   I personally don't see any logic in the
ARRL's thinking on this. Some person walks into a VE session and says "I
used to be a general, but I let my license expire 13 years ago, can I get
credit for the 5 wpm test?" The FCC is correct on this one, the answer
should be no.

I follow the logic - if there is a mis-type in the section dealing with expired/non-renewable Technician Class licenses.

My gut feeling is that they meant to say that credit is being given only for current or expired-but-renewable licenses, and that the holder of an expired-not-renewable Novice license may somehow hold a valid or expired-but-renewable Tech license, thereby conveying 5 wpm credit.

Is clear English so hard to write nowadays? The Commish' (or more accurately Johnny "Bald Eagle" Johnson) was burned severely by the attempt 25 years ago to rewrite the amateur rules in comic-book language (remember that one?) so he gave up entirely.

The League has tried on several occasions to gather up member's views
and so have the individual Directors. They've run expensive membership
surveys. Which got lame return rates.
>
Our (now ARRL VP) former Director Kay Cragie wt3p scoured the clubs
and reflectors for inputs on issues before the ARRL BOD. The ARRL
Director's e-mail addresses are published and so are our congress
critters'. The problem ain't THEM, as usual the problem is US. We're
typical American bellyachers: We don't engage our politicians in
dialogs, hell, we don't even VOTE. Then we turn around and beast on
'em for what we perceive as the decisons they make in "vacuums". The
U.S. Congress, the ARRL, it's all the same syndrome.
>
Fuggit all. I'm glad somebody is voting and making something anything
actually happen.

In article <%OJA6.74860$XV.18743454@news3.rdc1.on.home.com>,
tstdenis3160@home.com says...

> Aye Aye is a naval term ... and yes Canada does have a navy, although we have evolved to the point where defence is irrelevant (notice noone comes and bombs our harbours, office building etc) because we aren't savages who's only way of getting respect is to shoot, bomb, pilige or rape it out of them.

HHmmmm a nation of pussies??? Nah. I've met some Canucks and they have balls..you don;t. A couple of WWII surplus Corvettes from Mother England ain't no navy. Wonder how long Canada would last if it actually had to set up it's own army as opposed to sponging off first England and then the US.

>
> My job is strictly to get some pocket money while I'm in school since a full time employment would be impossible. Since I am training to become a police officer a security officer's job seemed right to me. Occasionally we do do static security, but a majority of our services comes from patroling neighbourhoods who hire us to do so.

I hear that Officer Tackleberry's job is open. Maybe you could write Lt. Drebbin and ask for a post on Police Squad. PATROLLING NEIGHBORHOODS>>>RENT A COP. Inaffectual wanna-bees with no powers other that their AUSTIN underwear. Please, you're killing me Security Officer St.Denis ha ha ha ha

>
> When we do static security, the most part of our work is just checking on the building (i.e. alarms, and thefts ... sure its dull but someone needs to do it)

Careful..static discharges with the touch of a hand on some conductive surface.

>
> As for the beer comment, quite frankly alcohol is of no use to me. I am not a weak willed inDUHvidual (sorry S.A. for using your term but it fits) such as yourself who requires alcohol to dull his senses and escape reality.

Then you are normally dull and outside the realm of reality??

```
>
> And my pepper spray is 10% o/c.  My baton isn't plastic its a 21" asp
> expandable baton.

OOhhhh how interesting.  I can pick those up in NYC for $39.95  And it
expands...I'll bet your popular with all the other neighborhood security
officers  huh

> I don't carry a badge, no need to.  That is typical
> american clout, after all a pfc should have a chest full of awards eh?

PFC??? Petite Frigging Canuck???

We dun need no steenkin badges...we are SECURITY OFFICER St.Denis

Once again ... proving the paranoid dilusions of most americans. "They are
all out to get me". I swear there must be something about living on the
other side of the border that makes you a schitzo.

Well it sure beats being an overweight overpaid taxi driver in the skies.
And it sure beats the alternative I have while in school, being a cashier or
who knows what.

Quite amusing ... I bet you had to check you taxi drivers (oops airline
pilots) manual for the word static eh?

We pretty much all carry them ... especially when you have to deal with some
drunk who is being an ass ... couple quick snaps make him no longer a
problem. And who cares about the price. I get it here for $45 canadian ..
thats about $30us (since I can assume you can't multiply)

>

when someone is wearing a uniform and comes out of a car marked "securworks"
for the most part people around here can put 2 and 2 together and determine
we are security. So why wear a badge?

> That's Singapore.

I doubt that spitting on the sidewalk would get you that punishment there either, stuff like that, or failing to flush a public toilet, or improperly disposing of your chewing gum, merits a fine at best. The famous caning was for graffiti on a public building, and I doubt if it was for the first offense at that. Of course all of this does make Singapore a rather pleasant, unscary, place to visit (if you are into places that remind one of suburban malls), with little danger that you'll get gum stuck to the bottom of your shoe. The regulations should be of little consequence to a visitor since it is always prudent to be on your very best behaviour when in other peoples' countries in any case.

In Thailand (which I like a lot) I doubt spitting on the sidewalk is illegal, in fact many things appear to be legal, or at least common, in Thailand which are illegal here except for maybe Nevada. I'm not sure about that, however, since it is always prudent to be on your very best behaviour when in other peoples' countries in any case.

In article <tVJA6.74867$XV.18750818@news3.rdc1.on.home.com>,
tstdenis3160@home.com says...

> Gee I bet you are damn proud of those plastic propellers you had on that
> 100$ suit you wore day in day out flying people around in your fancy taxi
> there bub

It's a living and I got to travel and I got personal use of some mighty

fine machinery. Nothing like flying out to see Ohio State play in the
Rose Bowl and going in your own plane.

... any idiot with 35k can get a commercial pilots licence. Heck,
> since you believe I'm such a boob, I got my ppl with IFR, MER, NFR's when I
> was 18 ...

Oh really?? Funny how it wasn't listed on your website (P.S. you're
right, it does suck) All I found was this

Designing Radio Contreolled Aircraft

note the spelling of the words here....Canuck education at its finest.

As to any idiot..you got me. First I had to have the money and then the
training and then the flight time. AND THEN someone had to hire me, so
Mr. I am looking for employment in the security and protection field,
guess you won't be hitting a other planes in the near future. I am sure
the Royal Canadian Air Force is breathing easier.

>
> I got a degree in physics at Ottawa U after transferring there from Windsor
> U.

Wow!!!! A Physics degree in just 2 years and yet you want to be a COP??

Was that A BeeESS in Physics from the BillNye School of Mr Wizardry??
Wanna create some atom bombs?? Maybe we can put together some nuclear
subs out of pipe cleaners?

Funny, if you look up the work physic..you'll see it also refers to an
enema, which you must be in need of as you are so full of merde (shit to
those who don;t speak French)

I worked as a telecommunications technician for a short time (until I
> realised how boring it was to sit at a desk doing meaningless work in
> telecomms). I decided in january that forensics would be more interesting
> and a very adequate use of my physics knowledge. To do so I need to become
> a police officer first. So here I am, in school again and working as an
> officer.

AYE AYE Officer Tackleberry. Maybe you and Lt Nordberg can work the
waterfronts of Toronto.

>
> So again before you insult other people, mister plastic wings wearing cab

> driver guy, I'd consider where you stand in relation first.

Lemme see. Driving around in a Yugo with a revolving yellow light on the roof in some rich neighborhoods playing rent a cop at $5.50US an hour or flying some rich people around in multimillion dollar planes, both prop and jet, getting major bucks, getting lots of time off..remember, I'm on call but that doesn't mean I fly all the time, so I get paid if I'm in the air or not. I get personal use of a 10 passenger turbo at least once a month AND THEY PAY ALL. In addition, there maintenance crew looks after my "lowly" Cherokee Twin and all I pay is insurance and parking fees.

I get to retire at 55 and will get all the bennies (except the turbo) and will receive 85% off my final salary for life. HMMMM

Yep..go ahead tout that great rent a cop job. You stand tall girl. You hold those shoulders back, chest puffed out and remember

That's alright, that's OK
You'll be pumping gas someday

Please, no more..you're 1 upmanship is killing me.

Ta ta Security Officer St.Denis.....better answer that call coming in

"Dog crapping on lawn.....talk to owner's. Don;t forget you 10% Dr.Pepper spray and your inflatable plastic baton. Maybe your clown shoes and a funny red nose????>

HHHAAAAA you're killing me. No wonder...all the funny comedians come from Canada. It's a natural; thing

Later Rob

DX is a way of life to some
A hobby to others
an obsession to the rest

OHHHHH MMMYYYY GOOOSSHHHH!~! Do you know who this is??? It's not Security Officer Rob St.Denis...IT'S MARK MORGAN!!!!

Holy shit..the witness protection program almost worked. Mark, you fooled all of us bud. So how the hell are you (no pun intended?)

Still into PAGAN and water sports are we. I see you've embellished on that bogus military career of yours.

Good to see you back dude. We missed you. Don;t be a stranger now err
or should that be any stranger now??

> It's a living and I got to travel and I got personal use of some mighty
> fine machinery. Nothing like flying out to see Ohio State play in the
> Rose Bowl and going in your own plane.

Personally I prefer to fly a Diamond Da-20 (katana) to any other aircraft ... oas out here rents em cheaper than a cesna 172

> Oh really?? Funny how it wasn't listed on your website (P.S. you're
> right, it does suck) All I found was this
> Designing Radio Contreolled Aircraft
>
> note the spelling of the words here....Canuck education at its finest.

The resume on the page is old ... not to mention it is not the one I use when I go for a job ...

> As to any idiot..you got me. First I had to have the money and then the
> training and then the flight time. AND THEN someone had to hire me, so
> Mr. I am looking for employment in the security and protection field,
> guess you won't be hitting a other planes in the near future. I am sure
> the Royal Canadian Air Force is breathing easier.

ANY college will train someone to be a commercial pilot if they have the cash ... ground school is a joke ... and flying a plane isn't the hardest thing in the world neither.

As for the RCAF ... there isn't any here in Ottawa ...

> Wow!!!! A Physics degree in just 2 years and yet you want to be a COP??

That is the minimum amount of time required to get a degree (30 credits). It's not honours ... but I wasn't interested in spending the extra year doing it. And as for being a cop ... Physics will help a great deal in forensics.

> Funny, if you look up the work physic..you'll see it also refers to an

> enema, which you must be in need of as you are so full of merde (shit to
> those who don;t speak French)

Spooky an american who realised that Canada's second language is french

> AYE AYE Officer Tackleberry. Maybe you and Lt Nordberg can work the
> waterfronts of Toronto.

You haven't the foggiest idea of how far Ottawa is from Toronto eh?

> Lemme see. Driving around in a Yugo with a revolving yellow light on the
> roof in some rich neighborhoods playing rent a cop at $5.50US an hour or
> flying some rich people around in multimillion dollar planes, both prop
> and jet, getting major bucks, getting lots of time off..remember, I'm on
> call but that doesn't mean I fly all the time, so I get paid if I'm in
> the air or not. I get personal use of a 10 passenger turbo at least once
> a month AND THEY PAY ALL. In addition, there maintenance crew looks
> after my "lowly" Cherokee Twin and all I pay is insurance and parking
> fees.

Well the car is a lumina, the light bar is from code3 (same as what the police use). And again this still beats the alternative ... Because for the most part ... no ... all of it ... working retail or other such service is horrid work ...

> I get to retire at 55 and will get all the bennies (except the turbo) and
> will receive 85% off my final salary for life. HMMMM

This job is temporary ... 2 yrs while I'm in school. After which time, seeing as how I am studying as a recruit I will be hired on to what will be a good career. And, I might add, not solely driven by the almighty buck that you americans are so fond of.

> Yep..go ahead tout that great rent a cop job. You stand tall girl. You
> hold those shoulders back, chest puffed out and remember
>
> That's alright, that's OK
> You'll be pumping gas someday

Please, if all else fails there is always that degree on my wall to back me up ...

> HHHAAAAA you're killing me. No wonder...all the funny comedians come
> from Canada. It's a natural; thing

There's a reason for that, americans are too busy "not" spying on any country they deem necessary, getting their harbours bombed by an out of date air force, having their federal buildings bombed by a crazy guy named tim, having universities bombed by another loon from the middle of nowhere, dealing crack to 10 year olds, beating your wives, and raping your kids.

ok here are one of his posts from rec.radio.cb, using the moniker of rec.radio.amatuer.policy, There are many of them, he complains of cbers ruining the band but yet he does the same and ruins a NG. Is this not hypocrytical. Perhaps Riley disapproves of this type of vigilantism. Is it an eye for an eye? Sounds like lots of inoccent people are affected.

How many hams out there (including the ARRL BOD) have ever stopped to think just *why* less that 25% of the hams licensed by the FCC belong to the ARRL? The Aircraft Owners and Pilots Assocation (AOPA) is in many ways a similar organization. It's members tend to be older, male, and have a certain amount of technical savvy; both groups face regulatory, legal, and economic pressures to regulate or eliminate their activities. It can be argued that it is in fact harder to become a pilot than a ham because the FAA actually requires people to demonstrate that they can fly while the FCC doesn't require any demonstration that you know how to operate! Certainly learning how to fly and being an active pilot (unless Uncle picks up the tab) can easily cost more than being a ham (though some hams do spend more on radios, towers, etc., than some pilots do for airplanes).

Despite the fact that becoming and remaining an active pilot takes more money and effort than becoming a ham, AOPA boasts a membership of *over 50%* of the active pilots in the US.

Why? I wish the heck I knew. Since I belong to both organizations my feeling is that AOPA really *listens* to its members and what they want. My experiece with the ARRL over the last 24 years has been that the Board decides what's good for ham radio and the rest of us had better let them run things. Good grief, the Amateur's Code makes it quite plain that disagreeing with the League constitutes disloyalty to ham radio!

Why is the average age of hams going up? Well, the population as a whole is getting older. We Baby Boomers are the largest population co-hort in the history of the planet and we're getting older. The average age of pilots is going up, too, but AOPA isn't advocating that standards be lowered as a means of bringing in the younger crowd.

The president of the AOPA, Phil Boyer, has dozens of "town meetings"all over the country every year with AOPA members. He always has other members of the top staff along that people can talk to. The AOPA open house in Maryland draws thousands of people and over a thousand airplanes for a *one day event*. Yes, there are vendors with goodies and airplanes to look at, but there's also the chance to meet the people who run the show. The New England Division director didn't even make it to the AMSAT Symposium in Portland, Maine this year.

AOPA *gives away an airplane every year*! We're not talking junk, either. Every plane is either new or refurbished down to the last rivet and loaded with goodies. The latest one is going to be worth over $200,000. Just pay your dues and you have a chance. If you bring more people into aviation, you get more chances. How many hams might pay dues to the ARRL just to have the chance of winning a dream station? Even a *really* fancy ham station is going to cost a lot less than two hundred grand! Oh, and AOPA dues are only $35/year.

Maybe aviators are more passionate about flying than hams are about radio. Maybe they still feel that there's something special about what they do. Maybe the organization is more responsive to the membership. On this last point, AOPA has a *much* broader range of "certified services" than does the ARRL. Credit card rebates, aircraft loans, other banking products, some niche insurance products, car rental discounts, etc. But honestly I feel the biggest difference is that the management doesn't believe they are the font of all aviation wisdom and they *listen* to the people who pay the bills.

Check the cb NG His moniker is AntiKeyclown, twistietweaker, punisherof
keyclowns, and many others  he changes in an effort to evade Filters,
majority of his postd are from mbix.net, or cotse all anon  newsreaders but
he forgets sometimes and psots from concentric. For double security he also
uses Aol then goes to anon sites and posts. I give him credit he must be a
wealthy man because he posts at least 500 messages a week .

While I hate to interrupt the endless argument you both love so both;
however
The above clips show a lack of logic. Just because an extra ham took
the exam after April 2000 says nothing at all about their qualification.
All it shows is what test they took. Neither of you have any idea
whether that ham barely made 5 WPM by guessing at the answers or could
sail along at 35 WPM+. Neither of you know if they passed with one
question to spare having memorized the question pool or could write a
textbook on radio communications.

Isn't it about time to bury this old rehash? I know I would rather
spend what little spare time I have on the air.
John

It's knowing that at any time, the big bad Canadians will close off their borders and we won;t be able to get that great Molson Ice to with our Cuban cigars...oh my goodness heavens to betsy.

Probably 10 pounds could be lost..as to overpaid..YOU BET YOUR SWEET ASS I WAS OVERPAID.

Leesssseeee

Salary...between 140 and 160k (annual and in US $$$, not that Canadian crap you use to wipe spills up with)

Annual Retirement pension of 85% so for you of the Canadian educational system that's between $114 and 136k annually..for not working. Plus I still get it if I decide to go back to work. Ya know Mark..err Rob (wink wink) I think a 2nd career as a Security Officer might be just the thing. $7 bucks an hour. Get to wave a big baton (obviously to you a great deal in light of your short comings..if you get my drift) Walk around ordering people around...HEY YOU THERE..GET OFF THAT LAWN. LEAVE THAT LAWN GNOME ALONE. Yes sir reybob..a Security officer that's for me.

Full health....maintained in my retirement for life

Full Maintenance on my personal plane. THAT'S FULL. That means annual inspections...oil, tune ups, and engine rebuilds HHHMMMM last year that came to $15kUS.

As of 2 years ago..plenty o'stock and this cosmetics company is making money..

I guess I'll have to hide my shame at being an overpaid taxi flyguy

HA HA HA HA HA HA HA HA HA HA HA HA

Gee, in your country that gets YOU arrested for assault. YOU the
security officer have no legal rights like a policeman to assault anyone.

According to YOUR laws, you may detain till legitimate authorities
arrive. You may not use force. Guess you didn't read that in your
official Police Squad coloring book. ANd you call me a putz scheeesss

>

Your privates are first class?? Then why even bother with a expanding
baton?? Sorry...just too easy

I think you are PFG pretty frigging gullible

> >

RENT A COPS in A RENT A CAR. Reminds me of the clowns in those little
cars t the circus.

I am sure you have all the people shaking and a quaking in their boots
there Mark.

HALT..IN THE NAME OF SECURWORKS.....STOP OR I'LL SLAP YOU WITH MY
$45CDN..$30US EXPANABLE BATON

OH BROTHER......

| Home Page:   http://robstdenis.home.dhs.org |
\-----------------------------------------------/
> It's knowing that at any time, the big bad Canadians will close off their
> borders and we won;t be able to get that great Molson Ice to with our
> Cuban cigars...oh my goodness  heavens to betsy.

What exactly is the point of making everyone feel threatened by you ?
Honestly ...

> Salary...between 140 and 160k (annual and in US $$$, not that Canadian
> crap you use to wipe spills up with)

my 1.09 buys a loaf of bread the same as yours does ... so sure in
international trade its pretty weak ... but I trade canadian only anyways

> Annual Retirement pension of 85%  so for you of the Canadian educational
> system  that's between $114 and 136k annually..for not working.  Plus I
> still get it if I decide to go back to work.  Ya know Mark..err Rob (wink
```

> wink) I think a 2nd career as a Security Officer might be just the thing. $7 bucks an hour. Get to wave a big baton (obviously to you a great deal in light of your short comings..if you get my drift) Walk around ordering people around...HEY YOU THERE..GET OFF THAT LAWN. LEAVE THAT LAWN GNOME ALONE. Yes sir reybob..a Security officer that's for me.

I never once said that the security thing is a good job ... it is simply better than the alternative ... and even at 14.50 an hour ... its better than the 26.09 I was getting on contracts ...

> Full health....maintained in my retirement for life

OHIP covers me ... and thats out of my taxes ...

> Full Maintenance on my personal plane. THAT'S FULL. That means annual inspections...oil, tune ups, and engine rebuilds HHHMMMM last year that came to $15kUS.

I rent ... much simpler around here. Especially since I don't fly too often ...

> As of 2 years ago..plenty o'stock and this cosmetics company is making money..

I jsut stick with the basics, acatel, nortel, mitel, cognos and cisco ... a wee bit in each just to play around ...

> I guess I'll have to hide my shame at being an overpaid taxi flyguy

Making money isn't everything ... just think that well ... when you retire you would have done nothing but cater to a bunch of rich guys ... you never helped a soul and all you did was feed your greed ... what a lovely person to be ...

> Lightening strikes are a hazard and we do have static eliminators trailing off the wings.

as I mentioned before ya most likely had to look it up

> what?? normal??? bright??? conscience? Human???

Be a drunken hill billy like 2/3's of the states

> Gee, in your country that gets YOU arrested for assault. YOU the security officer have no legal rights like a policeman to assault anyone. According to YOUR laws, you may detain till legitimate authorities arrive. You may not use force. Guess you didn't read that in your official Police Squad coloring book. ANd you call me a putz scheeesss

Actually if I beat someone with my baton it would be in self defence ... would be nice to use it on any vagrant but ahh well ... and just to let you know I have read the ccc .... all 810 pages of it ... I have the right to use force to stop someone from commiting an indictable offence as well as to

```
use force to detain someone who I have witnessed commiting one

> Your privates are first class?? Then why even bother with a expanding
> baton??  Sorry...just too easy
>
> I think you are PFG  pretty frigging gullible

right ....

> RENT A COPS in A RENT A CAR.  Reminds me of the clowns in those little
> cars t the circus.

you mean shriners ...

> I am sure you have all the people shaking and a quaking in their boots
> there Mark.

For the most part ... you dont need to do anything to get people to leave a
property or detain them ... people up here simply know when they are caught
... unlike the drunken hill billies you see on COPS every week who have the
dilusion they can get away

> HALT..IN THE NAME OF SECURWORKS.....STOP OR I'LL SLAP YOU WITH MY
> $45CDN..$30US EXPANABLE BATON
                                ^^^^^^^^^^^^ expandable you yutz

I have yet to use it ... and again ... we dont need to threaten people to
get them to do what we want them to

kids.

OH my...oh my the US has been insulted by a Canadian. Let's bomb the
shit out of them and steal the CN Tower.

I wish I had a copy of that recording done by a Canadian about the US.
It was back in the 70's I think.

I'd have it laminated at stuck on Mark...Rob's Expandable baton.

Poor Mark...doesn't realize that 70% of the Canadian economy is US
driven. If it weren't for US Rob, you'd be stuck as a French
possession..diddling the moose for you kicks.

Stay up North there dude...they need you more than we ever could. Canada
can't have enough rent a cops with honors degree in physics who dream of
being RCMP.

Works for me. 1000 feet of wire works out to about 28 radials 34 feet long
(allowing a few inches each for connections, etc.).

>What would you estimate the improvement will be when

>going from 4 to 8 radials?

Slight but noticeable. Most noticeable at low angles.
>
>> For a long time I had a quarter wave 20 meter vertical with the base 12

> > And if you ARE a member you still don't have a de facto voice. They can and do routinely ignore the bulk of the membership- those who differ with 'official' philosophy.

> How do they know what the bulk of their membership thinks? I'll bet 90% of ARRL members have never let their thoughts be known to the BOD. With so few members who ever actually make their thoughts known to the BOD, the BOD can rationalize almost any philosophy.

Tom Frenaye recently told me that I am among a handful of people that regularly gives him my input on various Amateur Radio matters. Without input, it is not even a question of rationalization; the Board does the best it can with less data than it wishes it has.

The BOD publish their names, addresses, telephone numbers and email address in QST and on the ARRL Web. They go to conventions, hamfests and club meetings and ask for input. That is the "official" philosophy that I see.

On 10 GHz, the 12-foot dish would have approximately 48 dBi of gain. Total loss on 10 GHz, pathloss and reflection loss, is about 288 dB.

Here are the particulars:

```
RESULTS
Frequency =  10000 MHz
Total transmit power =  1.2 watts
Total transmit power =  30.79181  dBm
Transmit antenna gain =  48 dBi
Receive antenna gain =  48 dBi
Distance to receiver =  720000 km
Free-space pathloss = -229.5966 db
Moon-bounce loss = -58.7 dB
Total loss (+- antenna gains) = -240.2966
Receive system Noise Figure =  6 dB (includes external noise)
Calculated receive system sensitivity in 500 Hz bandwidth = -141.0103 dBm
Received signal = -161.5048 dBm
Needed processing gain =  20.49454 dB
```

Unfortunately, the same feeling of lawlessness that drives people to operate
between 27 and 28 MHz also drives them to operate about 28 MHz. I feel it
is very much my concern.

The ARRL Board is virtually a closed society. The current New England Division director is on his "second time around" on the board. The first time he was elected was a number of years ago. He was the young go-getter who wanted to shake up the establishment and try to change things. His efforts were in vain. The "Old Boy" network of the BOD would have none of it. It would take a massive turn-over to have any effect on the BOD and the votes will never be there. Why? I happen to believe it's because many hams (me included) are tired of beating their heads against the castle wall.

In case you haven't noticed, the vast majority of hams don't even belong to the ARRL (and there will be one less this summer: me). Have you ever stopped to think about why? I opted out ot the League in the early seventies over the incentive licensing issue. I joined up again during the last solar cycle because I was working lots of DX and needed to use the outgoing QSL Buro...and that was the *only* reason. I'm not a "lurker", either. I've held offices in local radio clubs, done disaster work, handled traffic, run a major packet node, done contesting, DX'ing and OSCAR. But I don't like what ham radio has turned into and I place a large share of the blame squarely on the League's doorstep.

I've long felt that the League needs to have a professional public opinion firm do a major study of *all* hams, not just members, and one of the objectives should be to find out *why* more hams don't join the ARRL. I think the results would be interesting, to say the least.

Will somebody please point out to me one instance where experience has proven the BOD's vision of ham radio's future to be accurate? In that same vein, one of the things that bugs me no end about the League and it's leadership is that they will *never* admit a mistake. The incentive licensing program was a huge blow to ham radio at the time but I've never heard anybody say it was a bad idea.

Dave Reinhart, WA6ILT

Canadian/British Spelling lesson in order:

Centre = Center
Licence = License
Honour = Honor
Cheque = Check

Got the idea, just regional differences, but some folks should have to
apply for a permit to enter Canada and then be clearly labeled.

BTW, Most of these guys couldn't even find Possum Lodge much less use
Ductape in a constructive manner.

Who says you need to make 140k a year to be secure. When I was working on

contract I made about half that .. and I was in fine shape. Albeit this
security thing doesnt pay nearly as good it does have the luxury of offering
me part time employment and fairly easy shifts at which I pick dates and
times I am available

Man, check your history, pearl harbour, 1941/12/07 .. Japanese were out
dated by about 10 years at that point ...

Thats true Cecil. While their by-laws and constitution say they will do
certain things to help ham radio. They didn't promise anyone they would do
them. That would probably be their defense.

This is true.  In all the years I was a League member I never imagined they
would do such a thing.  I would faithfully read my QST every month as a good
member should and never seen anything that said they were changing their
position on licensing requirements. In fact, every QST seemed to indicate
that the membership didn't want change.
Then one day, they hit us with the restructuring proposal.  That was a
sucker-punch if I ever felt one.

Commercial fishing vessels have been using the Aeronautical HF freqs. for years as "private" freqs. to avoid interference and toll charges. They've been doing it with impunity and still are to this day, a situation far more serious than what you describe here, as it could cause potential interference to airborne aircraft. Any day or any night one can tune across HF aero freqs. and hear dozens of fishing vessels chatting away. There was token enforcement when the FCC had monitoring stations open across the country. Those stations and the ex-military intelligence types who manned them are gone. ergo, enforcement is gone.
Use of aero HF freqs. by commercial fishing vessels continues and has even increased. There has been no enforcement for the last six years when the last monitoring station was closed and monitoring personnel fired. Pull your head out of your ass, wipe the brown off, and get a fucking reality check! You people spew your shit here like you know something. FUCK YOU!
Go kiss some fucking Washington bureaucrat's ass. That's the make believe world you better understand. PISS ON YOU!

I missed your stupid fucking assinine remarks about the Coast Guard and Navy the first time I read your rant.

Get real asswipe, the U.S. Coast Guard devotes nearly all its assets to stopping the flood of illegal drugs coming into this country. What time they have left, goes to rescuing drunken pleasure boaters.   Your fucking full of shit, if they do get involved in any "radio enforcement," it is a very high priority situation and not a common every day duty like you bullshit away here.   Navy? Get real you fuckhead.   Yes, the navy will assist if asked in a distress situation. The navy does not under any circumstances use their national intelligence assets to routinely monitor marine freqs. The navy rdf and intelligence assets are just for that, national intelligence collection and in support of fleet operations and not for the routine domestic shit you describe in your stupid rant.   Repeat, FUCK YOU, go spew your bullshit some where else!   Get a reality check and a life!

Don't be so sure, I have heard, and I QUOTE, "EHH, don't work work good
does it?"
but then it isn't proper English.

Catch me on the Toronto Repeaters in the Summer, eh!

I am DX in the winter, eh!

My Dad says he quit school when they tried to tell him that possum
starts with an 'O' and tater starts with a 'P'.

Exactly what percentage of the membership lets the ARRL know that they
feel that they have been screwed? You and three others? How would you
feel if you found out that 99% of the ARRL membership agrees with the
ARRL positions?

Yanks, Brits and Canucks were the ones outta date on that one.  My Uncle
was
in North Africa on 7 dec with CF eating Lend Lease Beans, using a WWI
rifle,
and being supplied by Lend Lease Floating Stock.  We lucked out on that
one,
Canada supplied the free fighting world for over 18 months waiting on
the
US to join (Individually, many fine yanks fought and died under the
Canadian Ensign).

Jap Zeros were the best planes made, if more had been produced,
hell, we be taking Japanese and German Language lessons right now.

The point is that these people have NOT BEEN TO TRIAL,
NOT BEEN CONVICTED and in most cases NOT CHARGED!
This is a holding cell, THESE PEOPLE ARE GUILTY OF NOTHING!!
This is outrageous.

.
Shame on ARIZONA,USA
Be aware these people are NOT convicted of anything.

How do you know the ARRL proposal wasn't the majority opinion
of the ARRL membership? You are about 0.0005% of the ARRL membership.

They were no match for the F14 in that Kirk Douglas movie. :-)

Actually, the Flying Tigers kill ratio was much better than 1:1. I can't remember exactly what it was, but it was rather impressive. It ranks right up there with The Alamo where 150 or so Texans crippled the Mexican army so badly that Santa Ana had no chance at the later Battle of San Jacinto.

"Best" is a relative term. The Flying Tigers were faster so they just strafed the Zeros, knocking some down, and simply outran the rest. A handful of US civilian pilots essentially stymied the Japanese invasion of China before the US entered WWII. The Zero pilots avoided any Chinese city protected by the Flying Tigers.

Now, just a minute, doofus! First of all, I don't even CARE about all this childish bickering. I have not posted anything other than my own objections to the infantile rantings. I don't care who's doing what. And I have better things to do than try to sort it out. The whole diatribe is pointless.

>aviation wisdom and they *listen* to the people who pay the bills.
>
As a former flyer and AOPA member I agree with your basic sentiments.
But there are some very basic differences between the membership of
AOPA and the U.S. ham population and it's inclination to join the
ARRL. Right off the top a large percenatage of members of AOPA are
professional aviators of one flavor or another which is a no-counter
wrt the League. Why would a ham join ARRL to glom the AOPA car rental
discounts?? (the League does have a Visa card "deal". Zzzz.)

Nor can some pimply noclue nitwit truck on down to his local Radio
Slack and pick up a Skyhawk for $149.95 and put it  "on the air" and
become an instant "ham bands pilot" after only checking a few boxes in
a lame multiple guess written ham exams. We should live long enough to
see one of them pass a "checkride" on the ham bands with an FCC
"examiner" like pilots do with the FAA counterparts in their spheres
of operations.
>
You've brought up some valid analogies but some of them don't fly.
(Thank God!).

You know. This thread reminds me of the early days of computers. QST was
adamit about not featuring any articles about computers because they
don't have anything to do with amateur radio. Guess what? It seems that
every other article is about or has something to do with computers. The
same situation exhists with restructuring. So what...

You underrate the service Second City TV and the Great White North provided to the world.

How ya hosers doin, eh? :-)

73, Jim AC6XG

I understand that most (all?) VEs use the Farnsworth method of
sending code for the test. IE, characters sent at some high speed
like 13wpm spaced at 5wpm rate. Guess the idea is if you train
for it this way, that you'll find yourself at high speed quickly once
you spend a few hours/days on the air.

Excuse me, I *am* a member. The point I and many other hams are trying to make is that we feel alienated by the League and have decided to not support it. Personally, I'm so upset about ham radio in general that I've given serious consideration to selling all my gear and getting out of the hobby all together. The one thing that's been keeping me from doing that is AMSAT, not the ARRL. I could have bought some nice gear with the money that went to AMSAT over the last few years for the P3D/AO-40 campaign. The ARRL hasn't gotten a dime other than my dues. I believe in AMSAT's goals. I don't believe in the ARRL's.

What restrictions bother you?  No business communications?  That rule is to
protect us from our bands getting invaded by commercial users and taken over.
No dirty words?  Not on any band.  Broadcasting?  Who's gonna listen on your
frequency in a wrong band anyway?  frequency restrictions, ie, no HF for no-code

techs?  Well, you gotta hang a carrot to get upgrades.

I note the end time as that's when I'm no longer busy QSOing
and then can log it. Some log books specified "end time"
anyway.

I am talking at the very start, but then winters were colder then,
had to walk farther to school and the ice cream was sweeter. Some
stories tend to get polished.

 But that doesn't cover anyone who did NOT enter via the Novice class. A
former maritime CW operator who started with a General doesn't count!
Hard to believe they can't get something so simple right.

Again to ask my question,

If they have Extra, Conditional or General, why do they need a credit?

I am really confused on that point.

<K0HB@arrl.org> wrote in message news:9b1o7b$6l2$1@news.netmar.com...

> a Novice ticket, right?

Not necessarily. Many, many folks have never taken a Novice test, nor held a Novice license, nor taken a 5WPM Morse test.

The only two written tests I ever took were the Conditional and the Extra, and 13 & 20 WPM Morse tests. (No, you didn't need to take all the other tests, only the test of the class you applied for -- you did need 2 years time-in-grade as C/G/A before you could take the Extra exam.)

Under the rules, if I were to let my license lapse for over two years, I would need to take a 5WPM test to get a General or Extra license.

Under the rules, my cousin who held a Novice license for 1 year and let it lapse in 1954, has credit for 5WPM and can become an Extra without taking another Morse exam.

The ARRL pointed this out to FCC, but they apparently didn't understand the question, and the gobbledygook in paragraph 17 is their response.

73, Hans, K0HB

Referring to a ham who let his license expire and is getting back into
it.
If he was formerly a Novice(o ever took the Novice code test and can
prove it) he gets to skip taking a code test again. If he started as a
General first time he doesn't. Silly.

Have you seen this with your OWN eyes? I am in and out of the
Maricopa County jails regularly and can dispute some of your
allegations. As to others, I am not sure.

e.g., to say these people are guilty of nothing supposes trials have
been held. Is that a fact? If so, why are they in there at all?

Poor baby. She can't say where the "math was flawed," because she can't do any math, hasn't done any math in here, is afraid to do any math in here.

Go away. Let those who know what numbers are do the math.

Poor baby, so hurt, can only make nasty to others when she can't understand what is going on.

>   Statistics is obviously not one of your stronger traits.

True, but I know a Standard Deviate when she posts...and the steebie did.

A three-sigma certainty in that.

Poor baby. Unable to coexist with differing opinons?

Why would it be "tolerable and constructive?!?

Is that so she can stifle dissent and impose rerself as the
"lead enforcer" by calling everyone who disagrees with her
names and to make false charges of others' conduct?

Hello? Can anyone pronounce Waffen SS?

Poor sensitive Hurt ex-marine. Tsk, tsk.

"Professionals" by definition get paid for their services. I've gotten
paid for my electronics engineering for a long while and now enjoy
a comfortable retirement. Some, who haven't enjoyed such
careers or made much money out of their careers so far are
sorely vexed that they haven't done as well.

How much do ex-marines get in pension benefits?

I personally think that anyone who has let their license expire past the grace period should have to start over if they ever want to get back into it.   I don't think the FCC offered any kind of "credit" for any kind of past license. What I mean is if I had a general license 13 years ago and had let it expire, and came back before the restructuring, I would have had to start from scratch.

With that bit of clarification that you have given, I think both the FCC and the ARRL are wrong. The law should state:

"Any amateur with a CURRENT, or an EXPIRED LICENSE WITHIN THE GRACE PERIOD, can be given credit for the 5wpm code test by showing a CSCE or previous license.....yada yada yada."

I say that if they want to get back in, they take the tests. If they are already in, then give them the credit.

One thing that I personally want to see is people dedicated to the amateur radio service. Someone who let their license lapse, obviously didn't have that dedication, if they feel they can be dedicated to the hobby now then they got to prove it.

Referring to a ham who let his license expire and is getting back into
it.
If he was formerly a Novice(o ever took the Novice code test and can
prove it) he gets to skip taking a code test again. If he started as a
General first time he doesn't. Silly.

If they let it expire beyond the grace period, then should they
have credit for code, is the question.

>>   Tell that to Al Haynes.

>Who is Al Haynes?

My point exactly.

Al Haynes was the PIC of a DC-10 which suffered the catastrophic failure of the hydraulics systems, and with the help of his FO and a deadheading Captain, made an unceremonious arrival in St.Louis, MO. This occured in July of 1989.

Although many people died, Captain Haynes' superior skills as an Aviator saved (I believe) about 120 people from what whould have been certain death otherwise.

Many say there are no heros anymore. There are, but in a nation that insists on repeating the names of the villians over and over, who can remember the real heros...???

>Who says you need to make 140k a year to be secure.

Homes that would otherwise be classified as "average" in the local metro Atlanta area (where I am at the moment) are STARTING at $180,000.

You think you are going to qualify for a mortgage for a home on your "security officer" salary, Rob?

>When I was working on contract I made about half that .. and I was in fine shape.

Congratulations. And your other obligations are...??? (kids, mortgage, medical bills...?!?!)

>Albeit this
>security thing doesnt pay nearly as good it does have the luxury of offering
>me part time employment and fairly easy shifts at which I pick dates and
>times I am available

You sacrifice one benefit for the other. I love the job I am presently doing and it pays well, but the enviroment and community suck. If I decide to shuck this and go back to living strictly where I want to live, I will take a significant salary cut OR have to travel somewhere ELSE (and deal with other enviromental concern) to make it up.

"Youse pays your money ands takes yor chances...."

>Man, check your history, pearl harbour, 1941/12/07 .. Japanese were out
>dated by about 10 years at that point ...

Uhhhh...I suggest you spend some time with your nose in a textbook while shaking doorknobs, Rob. Even by the most conservative US textbooks, WE (the United States) were the ones who were "behind" anything....

However for the purposes of THIS forum, you are the one in diapers, Oh Impotent One. When was the last time you took an Amatuer Radio examination?

And Lennie...YOU said you let your COMMERCIAL license "expire" October 12th. Ergo ANY license that you procured at ANY age is irrelevant.

Just like you.

Perhaps they should all be made to cross their hearts and promise to be good and then get released. Face it, they are there for a reason, and it is not because they are particularly fine citizens I would guess. If you watch the video, you will see that the rooms are cleared frequently (like every hour or so) and thoroughly cleaned. Not having a chair or bed is not inhumane in my opinion. Neither I or anyone I have ever known has been put in one of those cells. Surely it is not just pure chance or bad luck that those who have, have been. I bet there is a good reason. The court system is there to figure out when, or if, someone has gotten themselves there in error. It works pretty well.

I maintain an e mail reflector called "ER-Nurses" and many of my "subscribers" are Canadian nurses. They are suffering "burn-out" well in excess of the numbers of similar US nurses except for the highest acuity shock-trauma units in NY, LA, etc.

There are many benefits to socialized medicine, and it looks real good on paper, but the realities and practicalities don't measure up to the expectations.

>just little baton carrying security officers like you and Tasha Yar on the

I wuz there, there was all kinds of hate & dissention pro & con on the
matter published in QST well before the BoD took it's position. There
was no "sucker punch" involved at all except in the minds of some of
those who disagreed with that position. Ditto this restructuring
restructuring thing. I supported Incentive Licensing, I did not
support restructuring. Win one lose one. Nobody died in either case.
At no point have I ever felt that just because I disagree with a BoD
position I should have a tantrum and walk away from the League and the
membership advantages.

Well first off ... This job (which I have stated repeatedly) is only a
temporary measure while I am studying to be a peace officer. Second off ...
the house accross the way from mine went for 204k just a month ago. My
folks picked this one up with a gross income of around 80k (at the time they
were fresh out of school) and had no problem getting theline of credit to
purchase (not mortgage) the house.

School ($15k a year), Housing ($1500 a month for the condo), insurance
($3k), car (bout a $1000 for gas and such a month), then there is food, fun,
etc etc etc ...

>

As I had mentioned the security thing is a part time job while I'm in school
... it is a decent job for that ... fairly easy work, nice hours ... police
pay far better, better hrs and much more interesting work ... this is a nice
step to take before I get there

Excuse me, but you stated that you are fixing to drop the membership.

You remind me of the American voting public. You know the ones that spew
they hate the system, or they dislike the two party system, etc. etc. They
you find they didn't even vote.

See my point? If you want to change things GET INVOLVED.

If it didn't work the way you tried it before, try again and again. Thats
what I do. Im a lifer pig of the league, but I dang sure don't support it
all the time.

Dan/W4NTI

> Rob St.Denis

Maybe you should PFC Security Officer St.Denis. Maybe you should Jane's Book of Aircraft instead of See Dick and Jane Run.

At the onset of WWII, the Zero was by far the better plane than anything the US had at that time..which was The Grumman Wildcat.

It was faster, more maneuverable and had double the range than the F4F. Other than the Wildcat had better durability, the Zero was a far better piece of equipment until the arrival of the Hellcat and the Corsair.

Their carrier forces were fair and away more advanced than the Lexington or the Hornet. Their submarine forces were on par with the Germans, at that time, they were copies of the successful U-boats. Our subs were lumbering giants, nor the mass produced Fleet boats that would come 2 years later.

So tell us Mark...what were the status of the Canadian Air and Navy units at the onset of the war? I sure they were on par with everything that the mighty Canadian military had to invest??

Wx here's great and having wonderful time. Glad you aren't here. Flight was uneventful and we are flying into Orlando this afternoon to go to Epcot. Ohhh, I forgot...I'm showing my greed by spending money I earned. BTW..you are so full of shit is you think anyone believes you earn 70K as a part time rent a cop. Good luck on the bread lines. Keep climbing that welfare ladder

Another instance of the inadequate educational system in Canada which offers 2 years honors degrees in Physics.

Get a clue Rob. Never let it be said that facts ever got in your way

Last time I dropped my membership (for a couple years) was a number of years ago when *the BOD sued the FCC in Federal court* over something so trivial that today I can't recall what the reason was. Now, talk about alienating your supervisors.. how can ya beat that? No wonder the FCC holds them at arms length these days.

Do you think they 'followed the will of the membership' in that move? I sure don't. Of course, it's not possible to prove it, as they almost never poll the membership about anything, or on the very rare occasions they do, such as the "Do you use CW?" poll, they design a poll that is so screwed up it confuses far more than it reveals. Makes it easy to interpret it any way anyone wishes.

A couple years ago the BOD floated the silly idea to let all licensees "self-test" for CW, with the fact that an operator was on the air attempting to operate CW would stand as evidence of his ability to send and receive, as required under the Treaty. For a while it looked like that was a serious proposal, but finally it died. I'm as much aware as anyone that CW no longer hods the importance it did but it is still a basic primary mode and should be supported better than that.

Mind you, now, I'm an active League member, and just re-upped for two years last month, after a long personal review of the overall situation following the Restructuring. Long ago I declined the cheap Life membership because I decided it was important to be able to leave when they got too far out of line-which they sometimes have. But it might as well be understood, I'm gonna keep a CLOSE eye on them and their proceedings. I perceive that there is considerable improvement in more recent years as compared to some years ago. The staff is mostly quite competant if a little arrogant in places.

I have been a active ham continuously for 44 years, monitoring ARRL the entire time, mostly as a member, and have seen a lot of garbage eminate from Newington, right along with all the good.
I am not a critic of Incentive Licensing, we needed that, and I met the challenge as did so many others.
I don't like the idea that the League needs to have critics, but it is clear to me that it is necessary to closely monitor their actions, just as it is with government.

Dick

Paranoia prevails at Len's house again. All citizens, including those in California, can subscribe (free) to the same FCC Daily Digest email which provides the "timely notice" to ARRL and others interested in FCC news.

Paranoia prevails at Len's house again. All citizens, including those in California, can subscribe (free) to the same FCC Daily Digest email which provides the "timely notice" to ARRL and others interested in FCC news.

No change of story. The time I used my IC706 running 3 watts AM on CB
CH19 was for an emergency which is perfectly legal. I'm surprised an
Extra class licensee is ignorant of such things.

>
> So tell us Mark...what were the status of the Canadian Air and Navy units at the onset of the war? I sure they were on par with everything that the mighty Canadian military had to invest??

Actually, the canadian millitary at that time was quite large ... it has since declined ...

>
> Wx here's great and having wonderful time. Glad you aren't here. Flight was uneventful and we are flying into Orlando this afternoon to go to Epcot. Ohhh, I forgot...I'm showing my greed by spending money I earned. BTW..you are so full of shit is you think anyone believes you earn 70K as a part time rent a cop. Good luck on the bread lines. Keep climbing that welfare ladder

Never said I made 70k as a rent a cop ... did it on contract ...since you read my cv ... you would have noticed:

Radio Communication Technician - RCMP MCB A/B/O Division - Contract #7016723
But apparently you have troubles reading ... too much time staring into the sun as a taxi driver?

Welfare? that's rich ... hehe ... I have never used social assistance in my life ... heck I dont even know where to go to get it!

> Another instance of the inadequate educational system in Canada which offers 2 years honors degrees in Physics.

Its a 3yr general degree ... Try 6 classes a semester for 5 semesters ...its easy to do when you drop the work part ... a 4yr or honours would require another 10 credits ...

Can't say for sure. As far as I could tell from the TV show, everybody up
there is a hoser - whatever that is. :-)

We're not really sure ... just sounds right to call certain people a hoser I
guess.

Check out what you ass??.  You were the one that had our harbors being
bombed by outdated aircraft.  When did the RAF bomb Pearl Harbor.  For
that matter...mentally challenged doofus, when did the RAF participate in
the Pacific theater of WWII  IN THEIR OWN AIRCRAFT.

Here's your own typed wordlets...

There's a reason for that, americans are too busy "not" spying on any
country they deem necessary, getting their harbours bombed by an out of
date air force

So what...other than Pearl Harbor, was there something else you were
referring to??  hmmmmmm...

Don't show your stupidity by making a statement and then answering it
incorrectly.

The Mustang came out in 1943-44...well after 1941.  But hey, that's that
Canuck educational system shining brightly..yes sir.

So tell me Mr Wizard..how did the Spitfire land on aircraft carriers?
```

What did they have...Velcro on their tyres??

Must have great on the airframes, them being made of wood with cloth wings and all. All that salt air keeping the fabric nice and tight.

Get a clue, better yet, get a box full. You are a treat.

Dan, try this:

http://www.acronymfinder.com/

In this case, "BOD" stands for "Board Of Directors".....

 FCC ham enforcement man Hollingsworth has demanded a
space shuttle to inspect the International Space Station
ham radio packet station. Apparently it has been using a
fake call sign of N0CALL for the last several days and
he would like to inspect the station for defects and
to make sure the ham radio license is properly displayed
on the wall.

Developing.....

I hate to belabor the obvious, but we'll do it anyway sincve Rob seems to think some of us can't read a history book......

>> At the onset of WWII, the Zero was by far the better plane than anything

>> the US had at that time..which was The Grumman Wildcat.

>Spitfire, mustang etc etc RAF aircraft ... check em out ...

(1) The Spitfire was not an American product.

(2) The Mustang was not in production at the ONSET of WW2.

>> So tell us Mark...what were the status of the Canadian Air and Navy units
>> at the onset of the war? I sure they were on par with everything that
>> the mighty Canadian military had to invest??

>Actually, the canadian millitary at that time was quite large ... it has
>since declined ...

The Canadian Armed Forces were not "quite large" at the onset of the war, which was 03 Spetember 1939 for the various outposts of the United Kingdom.

>Never said I made 70k as a rent a cop ... did it on contract ...since you
>read my cv ... you would have noticed:

>Radio Communication Technician - RCMP MCB A/B/O Division - Contract #7016723
>But apparently you have troubles reading ... too much time staring into the
>sun as a taxi driver?

Oh Geezus...We have a Canadian Lennie.

Old news, this was posted on April 1. Hollingsworth has already issue
a Notices of Apparent Liability, and has order the International Space
Station
can only use CW for the duration of the flight. :-)

Gee, I wish I had seen the whole thread. How much do ex-marines get in pension? Poor ol' marines? I recently heard from an old buddy of mine by e-mail. We served together in the Navy. I did my Vietnam stint (served 4 years) and got out. He was a radioman 2nd class at the time and went back to school. Then he joined another branch of the military. Hmmm ... he retired a chief warrant officer. Of course, he was a teenager when he joined the military (yeah, Vietnam needed bodies) - which meant he was able to retire - and start receiving his pension some years ago. Looked at a military pay scale recently? I'm not sure which grade WO he retired as, but I can see a $2000 to $3000 per month pension, plus lifetime medical care. Of course, he was too young to want to just quit, so he is teaching electronics at a college in California. Sooo .... I guess you'd best pass back to Lennie that the military ain't half a bad deal at all - it's just what you want to make of it! BTW, my dentist is retired from the military - and he's knocking down a good buck in civilian life on top of his pension. Then there is a good friend, Bud. He's a retired O-6 and ran an appliance store for a number of years. Heck, he keeps busy just tracking his various investments nowadays.

Again, the military may not be for everyone, but it, like anything in life, is what you make it. Treat it well and it will treat you VERY well.

73 from Rochester, NY

From those friendly folks in Gettysburg.....

"Two petitions have been filed by Stewart Teaze...(snip)"

"Because these petitions were filed later than thirty days after the public notice of the Commission's action, we dismiss them as untimely. We note, moreover, that Mr. Teaze's request appears to be moot in light of the recently announce project to encourage more young individuals to enter the amateur service."

I pause here so as to make emphasis on the next sentence.

"While we applaud the amatuer service community's commitment to involve more young people in amatuer radio, we also do not believe this goal is advanced by adding additional license classes to the amatuer service license structure. Rather, we believe a streamlined and simplified license structure in which operating priviledges are related to examination requirements will encourage individuals to join the amatuer service."

A lot of windage for "KISS" it.

"An America Not Preapred For War In Peacetime Will Not Know Peace In Any Time."

Absolutely wrong. Read below:

[Code of Federal Regulations]
[Title 47, Volume 5, Parts 80 to End]
[Revised as of October 1, 2000]
From the U.S. Government Printing Office via GPO Access
[CITE: 47CFR95.409]

[Page 536]

TITLE 47--TELECOMMUNICATION

COMMISSION (CONTINUED)

PART 95--PERSONAL RADIO SERVICES--Table of Contents

Subpart D--Citizens Band (CB) Radio Service

Sec. 95.409 (CB Rule 9) What equipment may I use at my CB station?

(a) You must use an FCC certificated CB transmitter at your CB station. You can identify an FCC certificated transmitter by the certification label placed on it by the manufacturer. You may examine a list of certificated equipment at any FCC Field Office or at FCC Headquarters. Use of a transmitter which is not FCC certificated voids your authority to operate the station.

(b) You must not make, or have made, any internal modification to a certificated CB transmitter. (See CB Rule 25, Sec. 95.425). Any internal modification to a certificated CB transmitter cancels the certification, and use of such a transmitter voids your authority to operate the station.

[48 FR 24894, June 3, 1983, as amended at 63 FR 36610, July 7, 1998]

Absolutely wrong. What is it about emergency communications that you
do not understand? Read below.

�97.403 Safety of life and protection of property.

No provision of these rules prevents the use by an amateur station of any
means of radiocommunication at its disposal to provide essential communication
needs in connection with the immediate safety of human life and immediate
protection of property when normal communication systems are not available.

That's alright. Just proving the simple rule that thems that ain't gots
is jealous of them that gots.

Supposedly Rob St.Doofus has a pilots license (doubtful)

He seems very upset with the fact that I get paid for the fun of flying
and not just paid..but to toot my own horn PAID. I have a house (paid
for)..a place to take my family on vacation (paid for), as opposed to

Secutity Officer St.Doofus having to rent and what's up with $1500 a
month in Ottawa?? and I own a fairly new ..1997 airplane, which, after
negotiating with the rich slobs who built up the company up and decided
private aviation was better for them than commercial aviation, thought
enough of my skills to not only hire me as their "taxi driver", but paid
me and paid for my own plane, except gas and insurance. And he has to
rent POOR BABY

The green eyed rears its Canuck ugly head and sez after getting hit
between his close placed eyes and sloping brow....thank you sir, may I
have another.

Suckie wx here on the gulf coast. no Orlando..no golf just TV and the
writing of......ROB ST.DENIS   SECURITY OFFICER ta da dummmmmmmm

Naw...Just me pontificating on the cowardice of certain persons with no intestinal fortitude to be a man (or woman) and put a name to their e mails, Jim. I have a pretty good idea who did it, and even if I am wrong, I am certain there is "cross-talk" going on between the principals.

>How much do ex-marines get in pension?

As I said, "nothing". "Ex" Marines have 6 feet of dirt over thier heads. Retired Marines don't do so bad, and former Marines may or may not get some form of government stipend depending on disability.

>Again, the military may not be for everyone, but it, like anything in life,
>is what you make it. Treat it well and it will treat you VERY well.

As is every other aspect of life, Jim. Lennie the Gutless, however, can't admit that about Amatuer Radio, ergo his ongoing campaign of hatred, lies and verbal abuse of persons who ARE Amatuers or Amatuer Radio as en entity unto itself.

You guys are taking yourself too seriously. It is illegal.   It is a federal offense. It is anti-social. It is improbable that any of the bad things that can happen will happen. Go forth - avoid sin - because it is the right thing to do. If you must sin keep it small and local. If you must sin big - then we will find you and sic Rolly Hollingsworth on your a**. And he will annoy you until you are dead or broke.

Jim KO6MH.

>
>Your explanation is insufficient to resolve the subjectivity of
>trying to say that upgrades "have an effect."

Nope. Your ignoring them is a process error. You need to show that the numbers of upgrades are small enough to be ignored. You have not done that.
>
>In the ten months from the end of June 2000 to the end of March
>2001 the number of Technician class licensees increased by
>16,029

Let's check that out. AH0A says 208,838 at the end of June 00 and 224,867 at the end of Mar 01. Difference is 16,029. That part you got right.

> but of that, 15,970 were new licensees

No. That's NOT correct.

First off, the number of new Techncian licenses in the period you mentioned is 13,494, not 15,970. This is because the new license total for the period is figured by adding up the monthly new licenses of July 2000 to March 2001. The new licenses issued in June 2000 are already included in the 208,838 total, because those are end of month totals. So you are already off by 2,476.

Second, the situation is more complex than you present. Here's how it works:

There were 208,838 Technician licenses in the database at the end of June 2000. At the end of March 2001 there were 224,867. This increase is equal to the following sum:

   (new Techncian licenses)
+ (Technician and Technician Plus licenses renewed in the grace period)
+ (upgrades from Novice)

+ (Technician Plus renewals before expiration)
- (expired Technician licenses)
- (cancelled Technician licenses)
- (upgrades to General or Extra)

You ignore most of those factors and just ASSUME that every new Technician did not upgrade in the ten month period.

> exclusive of any
>upgrading or modification or anything else except being new.

Wrong. See above.

>That leaves a difference of 59 which can be attributed to anything
>other than a new license.

Wrong. See above. You presume that none of the new licensees upgraded in ten months.

> Those 59 MAY include all those
>Tech-Plusses who were automatically "renewed" as Techs, but
>that group only represents 0.37% of the total change.

Nope.

A few days ago it was posted here by Jon Bloom that, in the current database, there were 7079 currently active "T" (Technician) licenses with "P" (Technician Plus) in the "previous license class" field. That's straight data from the FCC database. 7079, not 59. That number is a minimum, because the FCC continues to renew Tech Pluses as Technicians every day.
>
>>SO? The effect is still there.
>
>How BIG of an "effect" did you say it was? :-)

7079 out of 13,494 is a bit more than half.
>
>   <"quotes" from past messages omitted for brevity...>

You mean your MISTAKES. Do you deny that you wrote them? They are all in Google. Here are the ones you edited out that don't involve the above mistaken calculations. Are they accurate or not? Do you agree with them or not? If they are true facts, explain them. If they are false, say so.

(BEGIN QUOTES):

"For Technician-Plus license class the renewals can only be between 10 and 8 1/3 percent of all Technician-Plus licensees."

"For the Technician class licensee, the number of renewals will be small compared to all other classes because their initial numbers were small."

"Those 15,970 new Technicians still don't have any HF access with/without

CSCEs."

(END QUOTES)

Not a true fact in that bunch. Yet you wrote all of them, Len. I think you edited them out because you are beginning to realize how wrong they are.

And they are just a small sample of your mistakes in postings here. You provide us with an embarassment of riches. ;-)

>>Your understanding is still faulty.
>
>OK, so 0.37% of all those added Technician licensees represent
>something "significant" in showing that "many" Tech-Plusses
>were "renewed" as Technician?!? 59 out of 16,029? I don't think
>so...

The correct numbers are at least 7,079 out of 13,494. 52%. Pretty significant, I'd say.
>
>>Emperor Anderson has spoken.
>
>Now, now, you are getting testy... :-)

Me? Not at all. I'm just pointing out your errors, Len. Your mistakes in logical processes and the handling of these numbers. Real engineers welcome having their work checked. Wannabes are afraid of having their faulty methods exposed.
>
>>Nope. The use of any timeframe in a nonvalid process yields nonvalid data.
>>You use nonvalid processes - bad logic - mistakes - errors - call 'em what
>you
>>will.
>
>Tsk, tsk, you don't accept what I said so that means it is a
>"mistake, bad logic, errors?"

No. Your method of using the data is faulty. Your understanding of the AH0A information, and some of the current FCC rules, is defective, faulty, incorrect, invalid. In other words, just plain wrong. As I have shown repeatedly.

>Of course you won't accept it
>since that means acknowledging mistakes and bad logic on
>Micollis' part. :-)

What mistakes have I made? What bad logic have I shown? The only mistakes and bad logic here are YOURS, Len. As I have shown.
>
>>You can call me names but that won't make your faulty logic any more valid.
>
>Using another Extra's own sorting-and-tabulating values,
>available free of charge to anyone, is somehow "faulty?"

Nope. It's the WAY you use them that is faulty. As I have shown, and which you refuse to accept for some reason.
>
>Of course it is "faulty" because the data tabulations go
>against the True Faith of what many think that US amateur
>radio "should have." :-)

Nope. It is faulty because you ignore what is really going on with the data. You use inaccurate, oversimplified processes and then declare the results to be valid.

Explain the 7079 Technicians with "P" as prior license, Len. Explain why, in the AH0A data, there are almost no Technician renewals prior to April 2000 and the all of a sudden there are almost no Tech Plus renewals and thousands of Tech renewals, yet you claim that "only 59" Tech Pluses have been reclassed as Technicians.
>
>If the data shows trends away from what "should be" or
>what is urban myth, then the data and everything about it
>is "faulty."   :-)

That is YOUR philosophy, Len, not mine.

I'm an engineer. Engineers deal with facts and reality, not myths. Real engineers don't just shuffle numbers - we know what those numbers mean, their accuracy, and how they were derived.

If you like the AH0A data so much, take a look at the "differenced data" page...
>
>If the data is presented by someone not licensed in the US
>amateur radio service, it must be "heresy" and considered
>"faulty."   :-)

Nope. It's the faulty method that gives faulty answers.

Aw, hell, we had a VHF HT at the summer place per an old post of mine.
Used it to talk at the boat on rare occasions. I doubt it was on the
air for  three-four minutes per year. The fruitcake who strarted this
thread is talking using one of the 150 watt HF ssb marine rigs for
jollies.

>From: David Reinhart

>How many hams out there (including the ARRL BOD) have ever stopped to think
>just *why* less that 25% of the hams licensed by the FCC belong to the ARRL?

What is your estimate of the percentages of the totals for each of the
following reasons that hams may not belong to ARRL?

o The ham became deceased during his or her license term

o The ham is not active

o The ham is suffering financial difficulties and is choosing to buy groceries
instead

o The ham does not know much about the ARRL so doesn't know if it is a good value

o The ham is active only on a local repeater so does not believe he or she needs to belong to a national organization

o The ham is late in renewing

o The ham feels very strongly about an ARRL policy matter and so cannot support the organization

>AOPA boasts a membership of *over 50%* of the
>active pilots in the US.

What percentage of amateurs whose licenses are current with the FCC do you believe are active?

>Since I belong to both organizations my feeling
>is that AOPA really *listens* to its members and what they want. My
>experiece
>with the ARRL over the last 24 years has been that the Board decides what's
>good for ham radio and the rest of us had better let them run things.

ARRL Directors publish their names, addresses, telephone numbers and email addressses in QST. They attend club meetings and hamfests and go out of their ways to ask for membership input. I don't know much about AOPA; do their Directors do the same?

>The president of the AOPA, Phil Boyer, has dozens of "town meetings"all over
>the country every year with AOPA members. He always has other members of the
>top staff along that people can talk to.

In what way is this different than what Jim Haynie and the ARRL BOD members do?

>AOPA *gives away an airplane every year*!

Hmmm, that might explain some of your enthusiasm for the organization. :-)

Back when we "had to" keep a log here's what the FCC Part 12 (long before Part 97) said.

� 12.136 Logs. Each licensee of an amateur station shall keep an accurate log of station operation, which shall include the following:

(a) The date and time of each transmission. (The date need only be entered once for each day's operation. The expression "time of each transmission" means the time of making a call and need not be repeated during the sequence of communication which immediately follows; however, an entry shall be made in the log when signing off so as to show the period during which communication was carried on.)

Based on that early requirement, I still have the habit of logging both the start and end times of the contact. I have, however, quit logging "CQ" transmissions. (Some of my early logs show "CQ" more often than call signs in the "Station Called" column!).

In article <20010409125200.02398.00001978@ng-ch1.aol.com>, Steven J Robeson K4YZ <stevenrobeson@aol.com> writes:

> That's an understatement.

Once there was a Guppy-named-K4YZ, and he wanted to grow up and become a fish. He told all of the other fish that he was going to be a big fish, but they just laughed and said "Guppies are Guppies, that's all they are." But this Guppy-named-K4YZ thought he was special. He thought if you could yell loud enough, insult others, and generally be a jerk, then people would think he was a big fish. But they only thought he was a loud-mouthed guppy.

So the Guppy-named-K4YZ decided to get even with the other fish. He would be loud and rude and butt in where he wasn't wanted and had no reason to butt in except to make a nuisance of himself. He thought by commanding all of the attention, he could be the biggest fish in the pond. The other fish soon tired of Guppy's obnoxious and boorish behavior. So they got together and told the Guppy-named-K4YZ what a great fish he was, and that he should have the water closest to the sun, where more creatures could enjoy his magnificence and splendor. Soon the Guppy-named-K4YZ was exploring the world at the surface of the water. He was telling insects how to fly and frogs how to croak. He thought his opinion was in demand by the other creatures and shared it whenver he got the chance. The other creatures didn't listen. They weren't in the least interested in the tyrannical rantings of a guppy. Even a self-centered, loud-mouth, egotistical Guppy-named-K4YZ. Then one fine day, the Guppy-named-K4YZ was laying back against a lily pad, telling dragon fly larvae how to swim, when a passing Kingfisher, not knowing his reputation or stature, swooped down and swallowed the Guppy-named-K4YZ whole. Days later the Guppy-named-K4YZ by coincidence was deposited generously back into the very water he was snatched from, and showed up here. Welcome back to the rrap pond, Steve.

That sounds reasonable to me.

>One thing that I personally want to see is people dedicated to the amateur
>radio service. Someone who let their license lapse, obviously didn't have
>that dedication, if they feel they can be dedicated to the hobby now then
>they got to prove it.

The concept of "hobby dedication" is not in the FCC's declarations
or definitions of amateur radio. "Dedication" is a fine rousing-point
for fraternal orders, commonly used elsewhere in such groups. The
FCC licenses amateurs for the purpose of regulating US civil radio
but has not yet declared that "dedication" is a necessary part of
such licensing.

Is "dedication" a necessity to "prove" someone "worthy" of being in
the amateur radio community by members of such a group? Why
is that? The "amateur radio community" does not license anyone.

>     What?  It was "created" in the 50's and I can't "see" what has happened
>to CB "NOW" in 2001..???

Trying to bring up CB as some sort of bogeyman is false under the
subject thread.  If CB is some cause for alarum and the ARRL is
somehow "at fault," then there should have been some explanation
of how the ARRL did not help its membership because of the CB
creation.  Nursie did not bring this up, just inferred that the ARRL
and the FCC was "wrong."  No explanations, nothing but the
extension of personal pejoratives to organizations.  No thinking.

>    Lennie, you really are an idiot.  I thought it was just a "summer thing".

Showing fond regards will get nursie nowhere.  :-)

I've never pretended to be an "officer" in some militia group. Nursie got a waiver to wear another uniform in some NON-federal, NON-National Guard outfit without having to attend OCS, West Point, ROTC, or any military academy?

How was the "brigade" meeting on the 15th of March?   :-)

>   You really are a very pitiful, sorry person, Lennie. I truly do pity
>you Moreso, I pity your wife who is going to have to care for you.

Whatever strikes your pejorative personality. :-)

My wife takes care of me just fine...just as I take care of her just fine. [tsk, tsk, nursie missed out on the big chance at charging "impotence" again! ;-)]

Is nursie going to bother with AMATEUR RADIO TOPICS or is she going to continue insulting individuals she doesn't like?

Nursie is reminded that each posting of hers reflects on the US amateur radio service as a role model for others.

>
>   There's no controversy about how gutless you are, Lennie. None at all.

"Gutless?" :-)

As with Hans Brakob, I don't need anonymity or private mail to stand
up to someone in public.

Remember that every posting by an Extra class radio amateur is a
reflection on that radio service.

Not ignorance, nursie. It shows up on everyone's screens. You have
an obsession with Getting certain people. Quite a visible obsession.

You don't play well with others, a social defect.

>>True, but I know a Standard Deviate when she posts...and the
>>steebie did.
>
>   Take's one, Lennie?

The term "standard deviation" and "three-sigma" are very common
in statistics. Nursie cannot understand any word-play other than
common pejoratives.

There is an ongoing, irrelevant gang-machismo insult from nursie on IMPOTENCE. Sorry, little girl, I do not have that or even expect that. However, considering the number of times nursie has written it, she is probably post-menopausal.

>When was the last time you took an Amatuer Radio examination?

I have not taken any amatuer radio examination.

>   And Lennie...YOU said you let your COMMERCIAL license "expire" October 12th.

No. I said "virtually expire." For all intents and purposes, a commercial radiotelephone license has little need in US commercial radio. It is not a necessity for me being retired.

> Ergo ANY license that you procured at ANY age is irrelevant.
>
>   Just like you.

False. Nursie will come on again with the "necessity" to take an amatuer radio examination in order to "appreciate it" or show "dedication" and personal resolve. Neither appreciation, dedication, or resolve is a necessity to show the FCC any license worthiness.

Nursie wants to roll around in the mud of personal pejoratives yet cannot bring herself to consider that a First Phone was a license examination at an FCC office in Chicago, March 1955.

Nursie can only mud-wrestle.

Nursie is a prime example of a US Extra class amateur radio licensee.

>
>Paranoia prevails at Len's house again. All citizens, including those in
>California, can subscribe (free) to the same FCC Daily Digest email which
>provides the "timely notice" to ARRL and others interested in FCC news.

Point taken. I do not subscribe to that daily digest any more...

That still doesn't explain why the FCC doesn't update their own
WTB amateur radio page to reflect new rulings. [a minor oversight
but the FCC doesn't seem to consider amateur radio that
important to keep that page timely]

Considering the daily digest supplies all that news, why does the
ARRL bother to maintain news from the FCC as if the ARRL was
the major supplier of such news? [see "full story," etc., and other
little journalistic phrases]

Just a few questions...   :-)

Nursie thinks that differing opinions are "boorish." Everyone has to adhere to the Party Line or be dressed down by the self-proclaimed Dill Instructor. :-)

>>Why would it be "tolerable and constructive?!?
>
>   It would be tolerable because YOU would not be in there creating havoc
>and constructive because something might actually get done.

"Get done?"   There seems to be a very stout and staunch defense mounted to keep the status quo, preserving the conditions that existed decades ago when all the Dill Instructors got their first stripes. Keeping everything constant is not "constructive."

>   Two situations which do NOT occur with you there.

So...there is only the TRUE way, led by the Righteous?

Go for it, Moses. Part the Rad Sea, lead the children into Cannot. Back into slavery. Don't get wet again...

Because the FCC daily digest doesn't supply "all that news", but only
short one-line teasers (hence the name "digest").

Uhhhh.. What is it you disagree with? If he/she is going to do it anyway you
want them to do it big and ugly?  You don't think we should sic Riley on
them?

The real policy by the way is actually pretty permissive.  You gotta be real
bad before Riley comes barking.  I do agree Riley is bascially a marketing
concept though.

Amateur radio is an interesting, fascinating avocation.  To fully engage
in that hobby there is a necessity to license those who emit RF.

Unfortunately, some of the licensed hobbyists emit more than RF in
seeking to force all newcomers to do just as they did for their
license.  That emission results in false, misleading charges of
"hatred, lies, and abuse" as if the emitter represents ALL of US
amateur radio.  Such emitters seek to rule, to be the authorities
even though all they have are loud noises.

From 1940 through 1945. You don't know WW2 in any detail.

Before mouthing off ANONYMOUSLY it would be better to confirm
that the United Kingdom was at war with the Axis powers of WW2
before the United States. Canada was on the side of the Allied
Forces and actively fighting the war before the USA.

>Don't show your stupidity by making a statement and then answering it
>incorrectly.
>
>The Mustang came out in 1943-44...well after 1941. But hey, that's that
>Canuck educational system shining brightly..yes sir.

The first North American Aircraft "Mustang" flew on October 26, 1940.
The North American Model Number was NA-73X and was required
to have the civil aircraft registration NX-19998. [source: Rockwell
International public relations (Rockwell bought NAA some time ago)]

>So tell me Mr Wizard..how did the Spitfire land on aircraft carriers?
>What did they have...Velcro on their tyres??

A cursory check of older aviation literature will turn up a few
Supermarine Spitfires of more advanced mark being used
on carriers, called the "Seafire." Velcro had not been
invented yet so the Royal Navy used conventional arresting

gear.

>Must have great on the airframes, them being made of wood with cloth
>wings and all. All that salt air keeping the fabric nice and tight.

See Grumman, Vultee, and Douglas Aircraft models of WW2:
Wildcat, Dauntless, Avenger, and other good names (including
the "Vultee Vibrator"). Fabric and dope on tails and control
surfaces. Those were the victors at the Battle of Midway,
carrier borne all.

Brewster Aircraft Company, makers of that wonder of the
fighter-plane skies, the Buffalo, went bankrupt DURING
WW2. It was a US company.

>Get a clue, better yet, get a box full. You are a treat.

Get a truckload of civility, anonymous one, get a mountain
of knowledge. You are NOT a treat.

Go join big steebie fighting the Battle of the Flippin Sleeze.

>faulty.

Miccolis wishes to debate beyond the "fly speck in pepper" stage
stating constantly "errors, mistakes, fault!"   :-)

I believe my math was close enough to be accurate in assessment
of the classes of licenses both before and after April 15, 2000,
namely that the New licensees' trend to Technician continues and
that there is no signs of any exodus to increase users on
amateur HF bands.

That trend is visible to all...except those who do not want to see it.

>Why? Your work is faulty. That is the issue. I'm not going to do your work
>for you.

Ooooo! :-)

>If someone makes mistakes in how they analyze that data, is it somehow
>"wrong" to point out those mistakes? If so, why?

Sorry, old fly speck, but my analysis is no more "mistaken" after
restructuring any more than it was "mistaken" before. You
DON'T LIKE THE ANALYSIS, therefore you brand the analysis
"mistaken, faulty, error, etc."

What YOU WANT is to keep the status quo as much as possible,
to keep the Faith in what all Good and Real hams "should" think,
"must keep" as a "moral" and (even) way of life. I'm not going to
do that since the environment is changing, the paradigms are
changing and evolving. I don't give you twenty cents for your
paradigms of the olden times.

       <snip of fly-speckiness...>

>Me? Not at all. I'm just pointing out your errors, Len. Your mistakes in
>logical processes and the handling of these numbers. Real engineers welcome
>having their work checked. Wannabes are afraid of having their faulty methods
>exposed.

Bullshit. You are trying to act like Management. You WANT
certain conclusions and, by Hiram, you are going to get it.   :-)

The trend of newcomers going to Technician was there before restructuring. It continues. Further, against the grain of the established ham conservatives, Techs are renewing as Techs. Such is heresy against Conventional Wisdom (CW) of the long-time ham conservatives.

REAL engineers challenge bad decisions in "open court" of design review meetings or by going to other companies. REAL engineers don't sit around complacent with state-of-the-art of three decades ago or outdated methods. Avocations are NOT engineering. Amateur radio is an avocation.

>No. Your method of using the data is faulty. Your understanding of the AH0A
>information, and some of the current FCC rules, is defective, faulty,
>incorrect, invalid. In other words, just plain wrong. As I have shown
>repeatedly.

All Miccolis has "shown" is a desperation to keep the status quo, including keeping all the old myths alive. The status is not quo and newcomers are not appreciating the standards and practices of three, four, or five decades ago. Miccolis is in denial of the obvious.

<snip>

>>If the data shows trends away from what "should be" or
>>what is urban myth, then the data and everything about it
>>is "faulty." :-)
>
>That is YOUR philosophy, Len, not mine.

The hell it isn't. :-)

>I'm an engineer. Engineers deal with facts and reality, not myths. Real
>engineers don't just shuffle numbers - we know what those numbers mean, their
>accuracy, and how they were derived.

Geez. A rather pompous way of trying to say Miccolis is the only one correct. :-)

REAL engineers deal with facts, reality, environment, social climates, public opinion, quality, and, certainly, some numbers. Lots of the things that begin an engineering project developement aren't Divine or cast in everlasting cement. Even the goals can change between start and finish of a product. REAL engineers stay flexible, adaptable, able to deal with change and changes.

The amateur radio Beliefs that you subscribed to three decades ago have changed, are changing. Right about now one out of three US radio amateurs are Technician class. The vast majority of that class has not taken any morse code test and it doesn't appear likely that they wish to do so. The FCC said 11 years ago that it did not consider morse code testing to be useful to them as indicating anything useful for licensing. It repeated that one and a half years ago. Long-time conservative hams are still stuck in their time-warp of "knowing what is best for newcomers" when all they are doing is making newcomers do the same as they did...for no reason other than making them go through a Hazing Ritual.

Newcomers aren't buying the old Belief set. They shouldn't.

Sheesh! Who cares? I let my license expire in 1981 and decided to get back into amateur radio in 1993. So what if I didn't pass the 5 WPM test, nor the 13 WPM test either? The way these tests are set up, anyone with a halfway decent high school education shouldn't have a problem testing out. Heck, if I had known that I could have credit for my license WN2CJV, I could have simply waited 8 years instead of spending a few minutes taking that simple code test.

Gee, no kidding? I wasn't aware of that. Canada was on the side of the
Allies?? who would have thought. What aircraft did they build and fly.

Really?? And they first actually flown in combat didn't appear in the skies till 1943.

The first B17 flew in 1936, but they weren't available in combat till 1940. The point made was that the aforementioned aircraft did not exist during the attack and therefore the fact that Security officer St.Denis even mentioned it was WRONG. There were NO Mustangs available to take on the Japanese flights at Pearl Harbor. So, no pints for you, although you can obviously cut and paste from reference materials very well, and for that you get a gold star

Really?? No Velcro back then..who would have guessed. Gee, you'd think 3M would have invented something like that..oh wait..they did, back in the late 50's. Guess you're right another gold star

>

That's odd...all the Grumman planes for WWII in the Grumman museum here in Bethpage NY that flew for the navy have all metal control surfaces. According to them, it's because the constant humidity and water due to being at sea would allow any fabrics to stretch.

> Brewster Aircraft Company, makers of that wonder of the

> WW2. It was a US company.

Oh Kay. And that was the "state of the art" aircraft at Pearl Harbor and Midway. Something far below the horizon compared to the Zero, which was the original discussion at hand.

Ahhh but I have a lot of tricks up my sleeves. Just curious?? What is you problem? You seem to have a redwood size chip on your shoulders. I have yet to see one civil post come under your moniker. So would this be a case of do as I say and not as I do??

As to who I am, amongst my friends, my name is Jonathan. As to my knowledge, it's more than adequate. I don;t require a handful of days to sit in front of a computer just to cut and paste out of a CDRom book.

>
> Go join big steebie fighting the Battle of the Flippin Sleeze.

Aren't you the guy who is infatuated with Nazi Germany?? You seem to refer to them a lot. Well, no use for you that's for sure.

Just got an e-mail from a friend and this Lennie person is partially correct. The early production models of the Navy's Grumman planes did use fabric and doped control surfaces, however, in the Pacific theater due to the constant damp conditions of heat and humidity, the went to all metal control surfaces in early 1944. Although the fabric was initially more rugged, the damp conditions caused the fabric to stretch under stress and was deemed unsafe.

The planes exhibited at the Grumman museum are later models

So 1/2 a gold star to Lennie.

>>work!

>Why is "work" necessary?

I know of no radio Service where the rules require one to "work" to get a
license; the rules set the necessary qualifications and require only that the
applicant meet them. I see no difference in the licenses, or in the operating
habits, of those for whom passing the test was relatively easy and those for
whom it was hard.

Having said that, the premise that memorizing over 1000 questions is easy and
memorizing 26 characters, 10 numbers and a few punctuations and prosigns is
work is flawed.

I disagree with that to a large extent. The Directors make the
decisions, certainly the Directors from these parts put a lot of
effort into gathering up their constituent's thinking. My take is that
they do a helluva lot better job in this respect then do our
represent aives in the layers of legislatures we have to put up with.

>that was a serious proposal, but finally it died.
>
The point is that it did die. Check some of the idiotic proposals that
show up in the U.S. House of Representatives. There isn't a
representative organizatiion out there which doesn't have a nutcase
who will dream up something wifty once in awhile.

When I came back in outta the cold and read my first QST after a
quarter century or so I couldn't believe the huge improvements in all
respects. Really drove home the point that the League old-timers were
a bunch of hyper-conservative patriarchal stiffs. This is much better.

As I have posted on many occasions, the pizzing contest starts
on whether it was (a) a real safety-of-life-or-property
emergency and (b) whether other communication methods and
channels were available.

I'm sorry you are so ignorant of World War 2 and who was on which side. While this is supposed to be a newsgroup on amateur radio policy, it often becomes a forum on denigrating our geographic neighbors. If not the southeast US against everyone else, then some trying to show their "strength" about a time when they weren't alive yet.

Anonymous one, you can go to another newsgroup to gather information on who built what aircraft and when. Of 297,199 military aircraft built by US manufacturers in WW2, NAA built 40,068 or almost 14%.

>> The first North American Aircraft "Mustang" flew on October 26, 1940.

>
>Really?? And they first actually flown in combat didn't appear in the
>skies till 1943.

1941, not 1943. North American Aviation did the initial development on the Mustang under a British contract. The first Mustangs in combat were either Mustang II or Mustang III models. It wasn't until 1943 that the US 8th AF made a transition from P-47s to P-51s in the 4th Fighter Group (among others).

I left an opening for correction to make you feel good. Note the second A in "NAA" stands for Aviation, not Aircraft. You didn't correct on that, preferring to bluster on. No matter.

>The first B17 flew in 1936, but they weren't available in combat till
>1940. The point made was that the aforementioned aircraft did not exist
>during the attack and therefore the fact that Security officer St.Denis
>even mentioned it was WRONG.

No. Your only effort in here is NOT "correction" but simply intimidation, bluster, and hot air.

>. So, no pints for you, although you
>can obviously cut and paste from reference materials very well, and for
>that you get a gold star

In this case, I did not "cut and paste" but rather consulted a PR packet obtained at NAA some time ago by an acquaintence who actually flew 51 doggies (that's the P-51D to civilians). In the Pacific Theater of Operations. He's still around, BTW.

There are no "gold stars" desired or needed from anyone who

will wantonly pile up #### on someone from an allied country
and neighbor during a time when it is doubtful they existed.

>That's odd...all the Grumman planes for WWII in the Grumman museum here
>in Bethpage NY that flew for the navy have all metal control surfaces.
>According to them, it's because the constant humidity and water due to
>being at sea would allow any fabrics to stretch.

That's wrong which you will admit in another post. [there's some
rather optimistic hope for education, misplaced though it might
seem]

Those old Battle of Midway and Battle of the Philippine Sea
aircraft such as the Douglas Dauntless (SBD) and Grumman
Avenger (TBD) carried radio operator - gunners who had CW
and voice radios. There was no conformal coating used on
those radios, either (long-timers would know that as MFP or
Moisture-Fungus Proofing). OOK CW has also disappeared
from USN aircraft some time ago.

>Oh Kay. And that was the "state of the art" aircraft at Pearl Harbor and
>Midway. Something far below the horizon compared to the Zero, which was

Aviation newsgroups are far down the hall to the right. Go there
to "argue" about aviation that you don't know much about...

>Ahhh but I have a lot of tricks up my sleeves. Just curious?? What is
>you problem? You seem to have a redwood size chip on your shoulders. I
>have yet to see one civil post come under your moniker. So would this be
>a case of do as I say and not as I do??

No "chip." I've designed in chips in electronics and radios and
cut my first HF communications teeth in the Big Leagues of
military radio back in 1953. No OOK CW used then over
trans-Pacific fixed-point to fixed-point long-haul circuits. My
only advocacy in here is to talk about eliminating the amateur
radio telegraphy exam...and to prod a few "credentialists" who
don't act nice.

>As to who I am, amongst my friends, my name is Jonathan. As to my
>knowledge, it's more than adequate.

Not yet. Not adequate.

>I don;t require a handful of days to
>sit in front of a computer just to cut and paste out of a CDRom book.

Neither do I.

>Aren't you the guy who is infatuated with Nazi Germany?? You seem to

I've noticed that you rarely if ever contribute to amateur radio policy.
I've noticed that you like to post the same resume as to your
achievements on a regular basis. I've noticed that none of those
achievements are related to amateur radio in the least bit.

I also noticed that YOU failed to notice the I did not start, but that the Security Officier began the assault in terms of geographic bombastically (sic)

More great facts that I didn't know. Now if Regis asks that on Who wants to be a Millionaire or if it is a Final Jeopardy question..I'll have the answer. Thanks

The original discussion was that the Mustang was available during Pearl Harbor as compared to the Japanese Zero. Thanks for verifying my statement.

You forgot the part about the British refusing to use the Mustang until they put a Rolls Royce Merlin engine in..until the Allison V-12 became better.

AHHHH there we go. I knew that if you typed long enough you'd interject
CW somehow, some place. It was a good bet and I am glad I made it.

You are kidding? You were married to a Jewish women and yet you have to
gall to accuse people of being Nazi's..jack booted thugs...brown shirts??
That's one of the biggest lies I have ever read anywhere. Wow, you must
really have loved her to type some of the shit you do.

And I catch the meaning of the shower...asshole. You were never married
to any Jew. Seig Heil Lennie. The 3rd Reich should have had you for a

soldier. You were born in the wrong country. So tell me..any tattooed lampshades. Any all natural soap? Any mattresses' filled with hair. You must be fun ON Krystalneicht anniversary?

You were married to a Jew...sure and George W. Bush dresses himself every morning.

>
>
> >Well, no use for you that's for sure.
>
> Pizz off, Jonnie Whoeveryuare.
>

Better yet Lenn. I have found that people are oh so brave when they can hide like cowards behind a keyboard and a screen, so I tell ya what I'd like to do.

I am flying out to Dayton for the Hamvention in May and then some friends of mine and I are going to Vega for a week for golf and gambling. Here's the deal..I'll fly in LAX and meet you for coffee and bagels and you can tell me all your great exploits to my face. You can even pick the spot for breakfast. Whadda ya think? I think you're a coward and will most likely come back here with some brave typed words and you'll waffle and do anything not to have this come off. Cowards of your ilk usually turn tail and run when confronted.

SOme Leonard H. Anderson..put up or shut up.

OK ladies and gents..here come the brave words....whine mode on....stage is all yours LHA.

The FCC
said that since restructuring went into effect nearly a year ago, "there

does not appear to be any decline in the proper operation of amateur
stations."

Seems to be my observation, too. Comparing Jan '00 to Apr14, '00
to the time period after Apr 15, '00 as I listened to the experts to see

how it's done.

The point is that while the NRA represents all gun owners only NRA
members get to vote for their BOD. Everyone else may comment on the NRA
and it's policies and procedures but that is all. The NRA BOD like the
ARRL BOD can pretty much ignore the nonmemberes.(and members to at their
reelection risk)...

Ed I can't believe you'd risk stirrimg me up again. :~}

Hey, it's the premise that's flawed, OB. Learning 26 CW characters, 10
numerals and a few punctuations do not a CW operator make, maybe a Cub
Scout badge it will earn (or would have 40 years ago). All that plus
much, much, much working practice is needed, as you well know.

On the other hand, one does NOT memorize any ~1K of questions and
answers. One commits to memory the associations needed to pair questions
and answers on ONE test element of the pool, and repeats as necessary
untill that element is satisfactory scored at the 70th percentile. At
which time he begins anew with the next higher element's portion of the
pool, etc, etc, etc until all tests have been satisfactorily completed,
and he or she is now a freshly minted Extra clueless.
Got it?

Appears Leland and Doug are up to some tricks again. A peek into the cb room will see what they have been up to lately. Please check headers carefully when it looks like a troll, as it is probably forged. The numbert of phony posts in rec.cb that are traceable back to these two are astronomical. Below is a post from Leland under one of his alias names he was using at the time. He was having a bit of trouble ending his posts through the remailer. This post exposed who was behind much of the pornographical and obscene language on the cb group. He finally got careless and didn't delete his sig. about, "Morse Code." Doug continues to post daily, obsessed with policing our group for so much as a clipped clarifier or a mod, then accusing the poster of being homosexual. A careful archive search will reveal his nature and alignment with Doug, and their preoccupation with porn and graphic posts. In this very forum, Leland, a computer science major, (Accoding to QRZ) was told by 2 separate amateurs that a post meant to look like it came from me was forged. Leland was adamant in claiming it was posted by me, but why, I have no idea. You would think a computer college grad would be able to tell a forged post from a webtver, no? I have asked him to explain this on many occassions, and when I do, well, just take a glance at the cb room. There are many questions for which Leland will not answer, but the only answer I want, is why? These two folks are the poorest examples of amateursI have ever come across. Hundreds of forgeries and pornographical posts are logged, and they are now attempting to cross post in order to further escalate their trolling. I do not post in amateur radio, so if you ever see a post from me, please check the headers, as it is a forgery. Have a good day.
